Well, Dick, I've already said what I'm going to do about it directly (since I have no interest in HF right now, I'm going to do nothing). However, in the context of what you said above, I don't like pastrami, so that's out. But I do expect to enjoy the radio capabilities I have, barbeque steaks on the grill, enjoy the coming summer, and hope the rain goes away so I can sit around on my boat and soak up some harmful UV rays. In addition, I intend to address this topic occassionally when it comes up in this newsgroup.

Of course the outcome is the issue. If it weren't then there would be no
debate either way. Besides, what "expertise" is needed to see that
mandatory testing for only one mode out of dozens is wrong? Those that have
"expertise" on the subject are also basing their opinions on personal
feelings and self interests and trying to convince others they are correct.
And it isn't only those that have yet to pass the code requirement that are
against it. If it was about to be made a criminal offense to learn or use

the mode you would have an argument. As it stands, I can only see the code test being valid if EVERY mode that might possibly be used is tested for proficiency.   Then and only then would the code test have a valid leg to stand on.

http://www.fcc.gov/eb/
is the link for the enforcement bureau.

You have to be really really bad for the FCC to do something. Even police
jammers go on for months before the FCC does anything.

This is easily explained when one considers that there is a significant
percentage of the population that has long since lost the ability to think
independently and use logic and reason to form their opinions. For these
people, it's a Pavlovian response to present emotionally based opinions on
most issues, and simply regurgitate their social groups' pre-programmed
official "mantra"...

Ahhhh, indeed. Failure to pass a morse exam does not shorten one's life
or terminate it.

Are you a member of NAAB (National Association of Amateur Broadcasters)?
We aren't a broadcasting service and we aren't commercial, Larry.

YOU believe them to be arbitrary and capricious, Larry. You also believe that running a computer controlled morse contact is a snap. That'd make you one of the folks basing an opinion on something you know little about. Your posting would indicate that you would try to sway us toward believing that you are correct yet you've based your views on your tiny bit of knowledge and your "I don't wanna" feelings about morse testing.

Dave, what the court was saying is that technological change will change the
validity of FCC rules. The Morse code exam requirement was valid at one
time, but today it is not.

PSK 31 seems to work petty good.

You don't think that the Amateur Radio community can not lose frequency allocations. The FCC must allocate frequency in the public interest. How is the public interest satisfied by maintaining a non-conforming requirement?

Five FCC commissioners
Amateur Radio License class: none
License Restructuring Decision: delete 13 & 20 wpm code exam.

Go figure...

There are just as many or more of those kind of people on the other side who operate entirely on feelings and have adopted Morse code as their creed without considering the long term effects.

What about all the thinking hams who use their logic and reason to agree with the FCC and conclude that arbitrary and outdated requirements are bad for the Amateur Radio Service?

Following the same logic, it figures that you believe that slaves
should not have a vote on the subject of slavery.

Xref: supernews.google.com rec.radio.amateur.policy:17870

:   If the current situation continues, I think DoD will eliminate the MARS
: program very soon.  The organization is simply not meeting its obligation.
: Most overseas military installations, even the largest ones, have no MARS
: operation in place.  Of those which do, most have a difficult time
staffing
: those facilities.
:
:   For example, during the conflict with Serbia a few years ago, there was
no
: Army MARS program in place at all.  As a result, the Army had to resort to
: satellite phones to do the job that MARS once did (health & welfare
traffic,
: etc).  And the Army was not thrilled about it - it tied up communications
: capabilities that could have been used elsewhere (though this never
reached
: a critical stage, which would have forced that non-essential traffic off
the
: air).
:
:   To turn this situation around, hams must make a greater effort to reach
: out to young people.  It is too late to license these kids once they are
: stationed overseas (most overseas installations don't have enough General
: class operators to even give the license exams).
:
:   Efforts should be made to license kids before they enter the service.
```

: However, since most military personnel will return overseas several times
: during their career, it is never really too late to help military
personnel
: get their ham license.
:
:   If you live near a military installation, consider conducting classes,
and
: exam sessions, targeted towards military personnel. Make sure to
introduce
: MARS during those classes. Offering classes to military ROTC programs is
: also a good idea.
:
:   The current situation is not hopeless, but it is quickly reaching a
: turning point. If MARS continues to decline, it will soon reach that
point
: where the situation cannot be turned around.

Health and Welfare traffic started going to AT&T sat phone back during
the Gulf War. MARS is being redirected to FEMA duties, sort of a
replacement
for RACES as MARS operators are far more disciplined in proper net procedure
and work well with military nets.

It aborts and prohibits a citizen from having a ham life on HF. To
what purpose? So a bunch of entrenched incumbents can feel good about
themselves?

It's not the same logic at all. A slave would possess first hand experience with slavery, therefore his vote would most definitely be valid.

> Agreed, according to your definition of a "Ham". But what about those persons who do not possess the skill to operate CW? They do not fit the definition of a "Ham" as you use it here... because they cannot operate CW if they wanted to because of lack of skills.

And what about those code tested "Hams" who don't have knowledge of the various digital modes, ATV, satellite operation, and the list can go on and on? By your logic those code tested Hams are not "REAL Hams" either. They don't "possess the skill to operate" as you put it. What goes around comes

```
around. If  you want to conjure  up some logic, like yours above, just  be
prepared to have it applied universally, then we shall see if the shoe fits
or not.

> Which is basically what the whole discussion is about...

Amateur Radio elitism organized along  the Code / No Code dividing line. You
can dress up the CW elitism up anyway you like, but it's bigotry anyway you
look at it.

I mistyped. It should have read: Following the same logic, it figures
that you believe that non-slaves should not have a vote on the subject
of slavery.

Actually the logic would carry me more towards the debate between slaveholders and abolitionists that preceded the Civil War. The abolitionists held slaveholding to be morally repugnant in the strongest possible sense and would never have considered owning slaves. The slaveholders criticized the abolitionists as not knowing what they were talking about and not properly appreciating the finer points of Southern plantation living from the standpoint of being in and among the higher-quality members of that society.

Direct experience does inform a personal opinion. But political questions spring from first principles that provide the context for holding those opinions and assessing their validity. While there is a nobility in working towards a personal goal, there is nothing noble at all in working towards one arbitrarily mandated by a government entity.

Weren't they published by Hagstrom's and called the Street
Guides?   I had the ones for Brooklyn and Manhattan in the late
1940s when I was active in Scouting doing what is now recognized
as Urban Pathfinding. I'm sure that they were available for
other boroughs as well.

I happened to be travelling through LA last weekend and used the opportunity to listen to W6NUT repeater that was talked about. I, however, noticed the increased level of jamming and unauthorized use of the frequencies. Particularly in the repeaters in the low half of 147mhz.

What gives? Is LA always like this? This is hugely worse than here in San Jose.

Well,

I, for one, am always puzzled and dismayed at all the mess that apparently goes on on the West Coast. Occasionally, we will have a "bootlegger" get on the local repeaters and jam or harass the legit. ops. The local control ops are, apparently, more militant, observant, or obstinate than those out there. Local repeaters get shut down quickly in such circumstances--unless we are quietly Dfing the perp. Then they are left on for the idiot to get his jollies while we close in. Can you imagine the surprise when the fellow finds himself surrounded by 10 or so displeased hams? Why aren't there concerned hams out there that will go after/locate these goofballs?

The bottom line is (here in NC), we simply won't have such goings on. Why ANY control operator would tolerate nonsense on a repeater is beyond me. And I am happy to say that if you travel thru the Gastonia/Charlotte, NC area, you will pretty much find sane and business-like traffic on the machines. The conversations may be pretty mundane, but they are carried out in a dignified manner.

  Been that way for decades.

  After 35 years in the San Francisco/San  Jose area I really
  enjoy jammer-free and bozo-free 2-meters here ...

Larry,

I can see both sides of the issue. Yes, I tested when CW was a requirement for *any* license. And I began with the idea that, in order for me to achieve my own goals in the hobby, I would have to jump this hurdle. And when the no-code issue was first proposed, I was just as vehemently opposed to such a thing as anybody. After all, I reasoned, *I* had to do it, so why did those that followed get the same privileges without doing the same things I had to do. I was NOT, however, a CW fan. I thought that the Tech Class was as far as I would want to go, so I mostly forgot about the 5 WPM I passed initially. I soon tired of the VHF arena, so I decided, well, here I go again. I gotta do 13 WPM to move on, so alright.......gripe, grump, grumble. Along the way, I found myself fascinated by CW. Without realizing it, I found myself up far past bedtime for that last QSO, and discovered it to be much fun, and I derived a great satisfaction in that this mode that was previously so mysterious to me was now just like the French I took in high school. No one forced me to learn CW. Yes, it was a requirement, but I learned to love it on my own.

My point is simply this: IMHO, the time of the necessity of CW i.e., military, press, and amateur has passed. Now I said "necessity", not that CW should just be dropped and forgotten. I have a feeling that no matter if CW is not required for a license at some future time, it will live on simply because people will discover its wonders entirely on their own. I had no idea that I would enjoy CW, but once I began to deal with it, I discovered its value to ME. Some people are going to love it, others will have no interest whatsoever. I like broccoli, to others, it provokes a "YECH".

Nothing we do here in these forums are going to change the inevitable. *Some* day CW will no longer be a requirement whether we like it or not. In order to promote the hobby, indeed, promote the use of CW itself, we are going to have to welcome those who, in their "natural", uninitiated state may or may NOT know if they like CW or not. Those who might be inclined to learn it, we must help them reach that goal. Those that don't, we must not put them down as if they are some "lesser" class of ham than we who passed thru the hobby's portals in another era. ALL of these new people will be the ones to carry the torch, promote ham radio to the public, and insure its survival into future generations long after our keyers have fallen silent. We, the earlier carriers of Amateur Radio's legacy can have a positive impact on our hobby's future by welcoming and encouraging new hams, persuading our children and grandchildren, and making the path easier for the would-be newcomers. For if the would-be's, instead, become the "not-be's" because we harumphed and snorted at them because they rang our "bell" under different rules, then Amateur Radio itself could become a "not-be". After all, the newbies are not the ones who made the rules; they are just complying with the ones that exist at the time they enter the ranks. Railing on and on about CW is not helping. Yes, I wish it were 1969 again--for a number of reasons. But it's NOT! Can we not move on?

Respectful 73

Cecil,

Dadburn it! HARUMPH! I had to learn to drive on a "three-on-the-tree", so th' way I see it, ever'body orta have to learn on one! Why, I even had to drive a '54 Chevrolet school bus with a manual! Them dadburn so-called drivers today got them automatics--the lazy good fer nothin' loafers.   LOL!

I don't recall anybody being upset over the advent of automatics. The analogy, as you said, doesn't make sense.

Actually they didn't get to vote. But of course, people who
did not have slaves had a lot to say about the matter.

The Morse code exams requirement is challenged on
the grounds that it not in the public interest and not in
conformity with law. Attacking the petitioner/plaintiff is
irrelevant.

Also go to:

www.rainreport.com

I also see where Riley popped at least one unlicensed operator for being on 10 meters. I hope this is only the beginning of a much larger effort to rid the bands of pirates.

Excellent point.  I certainly respect and admire those that have and use
their Morse code skills.  But, it is not the proper function of government
to impose that proficiency skill upon person, who by there own choice, will
not need those skills.  It is the US Constitution that protect the
individual from the unnecessary government regulation.
The Morse code has had it day in the sun, let the next generation have their
day.
Thanks

Larry KC8EPO

Only the code test has not the benefit of prereleased exact questions
and answers. That alone is enough to cover it.

> Fold the Morse code exam into the written exam and that problem
> goes away.

Any such Morse test is no test at all.

Well actually, they're the sole protector of ARRL's singulara
interests, first, then if there's anything left, US hams as a group
might get a little attention.
Back in the days of HPM it was as you say. But HPM is long gone.

If this broad, general statement were true, wouldn't it be true for any example one might cite? Or, do you claim that it is only true for the thing that you happen not to like?

Ahhhh, no it's not - unless you define 'live and let live' to be anarchy.

> An HF ham is not allowed to use any mode until
> he/she has first used Morse code to pass the exam.

Not true.  An HF ham is someone who has already passed a Morse code exam.

A person who has passed a Morse code exam is not allowed to use any mode on
HF until he has passed a written exam.  "Why not live and let live?"

K9AAH (now sk) used to tell this joke at his public talks:

"When out in the field one day, an FCC enforcement officer happend upon a genie. After much discussion, the genie reluctantly granted him one wish. What is your wish, the genie scowled. The FCC man said I wish for there to be peace in the Middle East. The genie thought for a minute and said I'm sorry, but that is not within my power. You must wish for something else. After hearing this the FCC man said well then, I wish for the 435 repeater in LA to be cleared of all jamming and foul language. After a moment the genie said, where was that place you wanted peace again?"

Larry, you are citing a court case pitting a commercial broadcasting
network against a national political party. That the case and its
issues have little to do with amateur radio seems to have escaped you.

Can lose? I don't think that amateur radio will lose any of its HF
allocations though we might see 40m realigned in future.

We don't have a "non-conforming requirement". There is still a 5wpm
requirement for HF access. I don't think you should waste time blowing
smoke up the asses of those congregated in this newsgroup. Mount your
soapbox and spout your homemade semi-legalistic rantings where they
might make some difference. Here your stuff is just cheerleading.

There is no such thing as a "ham life on HF". I see you plan to go on another of your tangents from the "live and let live" thing. You are guaranteed the pursuit of happiness, not happiness itself.

Everyone has the opportunity to become a radio amateur. The Constitution guarantees equal opportunity, not equal results.

You've come close to capturing my view of Larry. Anything he dislikes
or feels that he isn't able to master becomes "arbitrary and
capricious".   If he'd spent a tiny portion of the time he has invested
in presenting irrelevant legal opinions, he'd have mastered morse at the
5 wpm level and would have HF privileges now.

You are clearly uninformed as to who is forming opinions
as to the rational and need for code testing. Many, including
myself, have "been there, done that" as to passing the
code test at speeds greater than 5 wpm. Not all those
opposed to continued code testing are so "uniformed"
as you think.

Cheers,
Bill K2UNK

So how come your statement doesn't include the following:

"Surely all hams, military communicators, communications
experts in commercial fields, etc. should be required to
know it (morse)."

The reality is that it is NOT viewed by anyone outside of
ham radio operators (and only some of them), as being
a bedrock of the basics for communications.

In the absense of any contradicting comments,
the FCC sure seems to think so too. I haven't read
one FCC comment that put any rational into
why code should be kept as a test...with the singular
exception being that for now, it still is a treaty
requirement.

That the fundamental concept has as much to do with
amateur service (as well as any other service) seems
to have escaped ole Dave. Case law is not so narrowly
viewed as you might wish.

Cheers,
Bill K2UNK

So tell us all then why the FCC ended 13 and 20 wpm
testing?  In the absence of any rational to sustain such
testing, it becomes pretty much a forgone conclusion
that 13 and 20 wpm had become "arbitrary and capricious"
in the minds of the FCC.

It has nothing to do with me. When the law is against you, pound on the
facts. When the facts are against you, pound on the law. When both against
pound on the opposition. When all is against you pound on the table.

ITU rule S25.5, and indrectly 47 CFR 97.503(a) indirectly, is the matter before the FCC WRC 2003 Advisory Committee, not me.

5 USC 706, "Scope of review" provides:

"To the extent necessary to decision and when presented, the reviewing court shall decide all relevant questions of law, interpret constitutional and statutory provisions, and determine the meaning or applicability of the terms of an agency action. The reviewing court shall - (1) compel agency action unlawfully withheld or unreasonably delayed; and (2) hold unlawful and set aside agency action, findings, and conclusions found to be - (A) arbitrary, capricious, an abuse of discretion, or otherwise not in accordance with law; (B) contrary to constitutional right, power, privilege, or immunity; (C) in excess of statutory jurisdiction, authority, or limitations, or short of statutory right; (D) without observance of procedure required by law; (E) unsupported by substantial evidence in a case subject to sections 556 and 557 of this title
or otherwise reviewed on the record of an agency hearing provided by statute; or (F) unwarranted by the facts to the extent that the facts are subject to trial de novo by the reviewing court. In making the foregoing determinations, the court shall review the whole record or those parts of it cited by a party, and due account shall be taken of the rule of prejudicial error."

47 CFR 97.503(a) is arbitrary. Therefore the rule is not in conformity with law,
but it exist and only exist because of a long standing obsolete treaty requirement,
ITU rule S25.5.

How long will the US government keep signing a treaty that impose an unnecessary requirement upon its citizens? 10 years? 50 years? 100 years? Why no make the Morse code proficiency exam a requirement for all Federal licenses?

Larry KC8EPO

Larry, as white as I am now, you could light up a neighborhood by reflecting the rays of a flashlight off my skin. In other words, I'm already careful to not to overdue the situation. But I look a little silly living at the beach with absolutely no tan at all, so I'm ready for a little skin color this year. However, I'll try to take your words of wisdom into consideration when out in the sun - though I do tend to avoid thinking about you when I'm trying to enjoy myself in the great outdoors. ;-)

Why would I want to do that, Larry. My basic transceiver outputs about a hundred watts, and my amplifier throws in about another 650 watts. And I have so many antennas, the dogs in the neighborhood have begun to confuse them with trees (don't ask). This summer, my goal is to cut the number of antennas, but I would never cut that number to a single dipole.

About the only thing around this house that is limited to 5 watts are the handhelds, and I certainly would not use those in an attempt to "talk" to a hundred countries.

Only in your mind, Larry, only in your mind. The rational reasons
for keeping a Morse code exam have disappeared except for S25.5.
Isn't that what the FCC has said?

> The reason for code testing doesn't
> have to be stated in the Basis and Purpose of the ARS in order to be
> valid, except to assist you in making another strawman argument.

It proves that preservation of Morse code is NOT one of the purposes
of the amateur radio service. What is wrong with live and let live?
Why can't there be a free choice of modes in a hobby in a free country?

> Again, only if you are grasping at straws in a feeble attempt to justify
> dropping the requirements.

Earth to Larry!!! I'm doing nothing except *reporting* what direction
the FCC has taken. Did you even bother to read what they said?

> By saying "Live and let live," you're really saying "Give it
> away for nothing to anyone who thinks they wannabe a ham."

Absolutely wrong, Larry. "Live and let live" means allowing each
individual ham to decide what he wants to do within ham radio without
being forced to pass a stand-alone exam on your personal favorite mode.

Then you, Cecil and others that have any desire to not
see morse usage dwindle to non-use have your path
chartered for you. I find it amazing that there are still
many devotees of various "old technologies" (archery,
manual gearbox transmissions, musket rifles, etc.) that have
no problem recruiting others to their special interest,
but you (Larry) expect all morse to just go away because
you are unwilling to be a proactive proponent of morse
by new hams.

>proficiency.

That is your problem as a CW devotee. If CW usage
dies out, it is the fault of those that claim they love
it, rather than anyone else. The only thing that has
changed is that there is no longer a mandatory
recruiting (affirmative action) test that indirectly became
a source of new CW users by default.

>All they are doing is seeking to increase the efficiency of

>arguments with the heck shot out of it. This is getting too easy.

No Larry, for exactly the same reasons as there is now
a manual gearbox available for your new Toyota, there will
be continued usage of CW in the future. There may be
fewer CW operators, but if CW has the virtues you claim,
then it will continue to have a following...no test requirement
being needed anymore than people need a manual gearbox
skill test to be users and lovers of manual shifting vs automatic.

Cheers,
Bill K2UNK

Cecil:

I've done a fair amount of local SSB "ragchewing" myself, Cecil --
but what does that have to do with my challenge to Dwight?

In article <3abdf29b.1137294@news.mindspring.com>, billsohl@mindspring.com (Bill Sohl) writes:

>>Bill, my new 2001 Toyota Corolla LE has a 5-speed manual gearbox. It gets over 42 MPG highway mileage, >30 MPG in city driving. It has much better performance, lower emissions, and at least 15% better fuel economy than the comparable automatic transmission model of the same automobile. It is also simplicity itself to drive, because I have accepted the challenge of mastering the technique of driving with a manual transmission. There you go -- another one of your best arguments with the heck shot out of it. This is getting too easy.
>
>No Larry, for exactly the same reasons as there is now a manual gearbox available for your new Toyota, there will be continued usage of CW in the future. There may be fewer CW operators, but if CW has the virtues you claim, then it will continue to have a following...no test requirement being needed anymore than people need a manual gearbox skill test to be users and lovers of manual shifting vs automatic.

Bill:

I hate to have to do it to you again on consecutive days, but I'm about to shoot your argument out from under you again.

In order to locate a 5-speed Corolla to buy, I had to use the phone and Internet to search dealers all over the area. I ended up purchasing mine from a dealer in Baltimore, over 100 miles from where I live in Dover, Delaware. If 5-speed transmissions are so popular, why are they now only found on smaller, compact cars with 4-cylinder engines, and then only in very tiny quantities (< 5% of total sales)? I am guessing that in 10 years, manual gearboxes will be largely obsolete. And the reason? It is easier and less of a physical challenge to drive an automobile with an automatic transmission!

While I'm not suggesting that learning how to drive with a manual transmission should be a requirement for obtaining a driver's license, the fact is that the benefits and advantages of manual transmissions do not assure their continued usage in the future -- and the exact same is true for CW. People had access to the benefits and advantages of CW mainly because the code testing requirement caused there to be a significant number of hams who tried the mode, and stuck with it long enough to gain operating proficiency. Once that happened, they became avid supporters of the mode. I learned how to drive with an automatic transmission. My first car was a '65 Ford LTD with a 390 cu. in. V-8, 4-barrel carb, dual exhaust, and automatic transmission. It could leave Camaros and Firebirds in the dust at a red light, and pass everything else except for the local Arco station, due to it getting 10 MPG on a good day. Due to the 1973 Arab Oil Embargo and the tripling of the price of a gallon of gas, my next car was a '72 Mitsubishi Colt, with a 4-banger and 4-on-the-floor. I wasn't crazy about it at the time, but I did enjoy getting some serious fuel economy which essentially allowed me to commute the same distances for the same money as I was spending on the LTD. Your argument doesn't hold a drop of water -- much less a gallon of gasoline!

Sooo...dumbing down the licensing requirements makes ham radio more attractive... ... ...how? More attractive to lazy, disinterested, unenthusiastic and incurious folks seeking an alternative for the chaos of CB, perhaps...or more likely, looking for fresh ground to create more chaos. Reducing licensing requirements are only going to make ham radio more attractive to the undesirables, Cecil. It cannot and will not provide any impetus for increased participation. Ham Radio is now in it's death throes -- and it's being killed by people like you who seek to have full privileges given away as a bribe to increase participation. All that has done is to cement the image of ham radio as something less than desirable and as deserving of the same disrespect that has been shown to CB.

If you put me in charge of amateur radio licensing policies, I'd have us back to a 5-level licensing structure with 5, 13, and 20 WPM code testing faster than you can say Riley Hollingsworth. And we would see renewed interest and real growth in our numbers virtually overnight. If the ARRL was really interested in making money and securing their future, they would support this concept, and make a 180-degree change in the direction of their policy. Your and your "Incentive Licensing" whiner cronies need to be ignored. Your whining is the most dangerous and damaging thing ham radio has ever experienced.

So, Dwight, what you're basically saying is that without the crutch
of a "big gun" station behind it, voice modes are essentially useless!
And, I must admit, I totally agree!

Larry, try taking a class in logic.  Your conclusion makes
no sense.  Indeed, that you state:  "there is
no connection between the Morse testing requirement and any
technical or operational development within the realm of amateur
radio -- or any other radio service" is exactly why there is
no need for any morse skill testing at all.

Larry, where did I say they were "so popular." I placed

no criteria on the degree of popularity. The fact remains
that there is apparently sufficient interest and market for
Toyota (and others) to still offer and sell manual gearbox
vehicles. That you had to go 100 miles to find one doesn't
change that. Likewise, those people interested in archery
probably have to do a bit of looking to find what they want
since it isn't the typical "mall shop" purchase.

> I am guessing that
>in 10 years, manual gearboxes will be largely obsolete. And the
>reason? It is easier and less of a physical challenge to drive an

It is the buying public and marketability of the manual
gearbox that will either see it continue or go away
completely. Somehow, a Porsche with an automatic
just doesn't cut it in my book...nor will it for most
eople that buy Porsche's in the future. Ditto for many
other marques also.

>People had access to the benefits and

Again, you are, therefore, saying there is NO validity to
your code claims that are sufficient to gain new users
without a mandatory test. Sorry you don't believe you
can sustain code recruiting without a mandatory test.

I added dual stromberg 97s and the car had 4:11 rear. It
was quick to...although nothing as to a 390.

>Due to the
>1973 Arab Oil Embargo and the tripling of the price of a gallon of

I've been saying it since 1981, Larry. That's when I noticed that
I was spending more time on computers and less time on ham radio.

For what Dwight wants to do, SSB is obviously more *effective* than
CW. 5w CW QSOs with foreign hams is not effective at all if what
one wants to do is ragchew with domestic friends on SSB. What is
wrong with live and let live?

Larry, exactly where is it written that the purpose of the Amateur
Radio Service is the preservation of Morse code? If Morse code
doesn't make it on its own merits without a governmental affirmative
action welfare program, it didn't deserve to make it. However, I
think CW will be around as long as the ARS.

How do you get "dumbing down" out of "more attractive and less
unattractive"? Oh yeah, that's just another straw man.

> If you put me in charge of amateur radio licensing policies, I'd have

We know, we know, Larry. You have a death wish for the ARS. You have
told us about it over and over and over.

> And we would
> see renewed interest and real growth in our numbers virtually overnight.

Of course we would, Larry, of course we would. (Somebody get the net.)

I know when I'm on call I leave my startac on vibrate and leave the theatre
to answer ...

same thing goes with people who do innapropriate things anywhere else in
life ... they do it because they can and no other reason ... the cell
phone/pager craze ius just a different avenue

Dwight, I don't know if you and I had this conversation before or it was someone else, but for what it is worth, when I joined the Navy (to see the wonderful world of Vietnam), the code requirement for radiomen (I got out of it for only 4 years active duty, ET and CT required 6) had recently been reduced. I had spoken with another verteran from another service who informed me that the other branch had eliminated it by the early 70s. No one want to understand this isn't a 'gotta be' versa 'NO' code. It has been replaced (but not for enjoyment). I used to be pretty good (still not bad). When I turned in what was nearly a full page of perfect copy at 40 WPM, I was dismissed from class. There was a fellow on Guam who could copy 60. Neither one of us was going to compete with a 100 WPM teletype (which was THEN technology). CW has a few nice things about it - variable length encoding, which helps keep transmission rates higher. Did someone say PSK-31? Ooops! I am, however, contemplating a new use for CW. I am getting aggrivated by the control panels at work. They put fewer and fewer buttons and switches on 'em, instead adding (ready for this?) 'ALTERNATE' buttons, to be used in various combinations with other buttons! We even have a ctrl-alt-del function!   And, we aren't even running windows (this is on PLCs). Just for chuckles and grins (I know I can achieve under a 5 ms scan rate), I think I'm gonna find an old STRAIGHT KEY and use it for everything. I might just wait 13 more months so I will be fully covered for retirement because I don't know how much of a sense of humor some of the guys have at work!

73 from Rochester,
Jim AA2QA

That is not a "perfect example" unless the end result of removing the code
requirement is that you can no longer use CW. If, after removal of the code
requirement, you or anyone else that wishes to learn and use CW is free to

do so there is NO parallel.

Again, unless the end result is that it becomes illegal to use CW the
comparison is invalid.

W6RCecilA <Cecil.A.Moore@IEEE.org> always writes:
> What is wrong with live and let live?

That depends on what you intend to imply by asking the question. If you're
asking: what's wrong with letting anybody and everybody do whatever they
please, there are any number of things wrong with it. If you're asking:
what's wrong with letting people operate any legal mode they want to, then
the answer is nothing. "Live and let live" is not precluded by Part 97.

Sure it is. The outcome of the argument is not the issue. The issue is that
you have a group of people with absolutely no expertise on the subject
forming an opinion based on personal feelings and self interest, that they
are trying to convince others is correct.

How do you explain the host of people with expertise on the
subject who possess those same opinions?

Ahhhh, but live and let live is precluded by the Morse code
requirement. An HF ham is not allowed to use any mode until

he/she has first used Morse code to pass the exam.

"W6DKN" <w6dkn@qsl.net> wrote in message news:yivv6.3230

> Sure it is. The outcome of the argument is not the issue. The issue is that you have a group of people with absolutely no expertise on the subject forming an opinion based on personal feelings and self interest, that they are trying to convince others is correct.

The people who oppose the Morse code exam statute 47 CFR 97.503(a) are not required by law to be proficient in manual Morse code reception in order to petition their government to delete the rule. The Amateur Radio community have ignore the facts and laws for too long. Your delusion that only Morse code experts can decide this matter is pure non-sense.

In its 1999 License Restructuring Decision , the FCC acknowledge the effect technological changes on the need for Morse code proficiency:
"the design of modern communications systems, including personal communication services, satellite, fiber optic, and high definition television systems, are based on digital communication technologies. We also note that no communication system has been designed in many years that depends on hand-keyed telegraphy or the ability to receive messages in Morse code by ear. In contrast, modern communication systems are designed to be automated systems."

In a October 27, 1997 briefing paper prepared for digital television broadcasters, Mr. Erwin G. Krasnow noted the effects of technology on regulation: "The Supreme Court has observed in CBS v. DNC that the FCC must "walk a 'tightrope' to preserve the First Amendment values written into the Radio Act and its successor, the Communications Act." After referring to its Red Lion decision, the Court noted that "[t]he problems of regulation are rendered more difficult because the broadcast industry is dynamic in terms of technological change; solutions adequate a decade ago are not necessarily so now, and those acceptable today may well be outmoded 10 years hence." Columbia Broadcasting Systems, Inc. v. Democratic National Committee, 412 U.S. 94, 117 (1973)."

Because of technological and operational changes, the manual Morse code exam is unnecessary. Its use as a licensure examination element to authorize frequency bands and emission types, other than manual Morse code operation, is arbitrary and capricious. The exam is even arbitrary to authorization Morse code operation, since such operations can be conducted by computer control.

The ITU rule S25.5 forces the FCC to impose a requirement upon its citizens that is unlawful. 5 U.S.C. 706, "Scope of review" provides:

To the extent necessary to decision and when presented, the reviewing court shall decide all relevant questions of law, interpret constitutional and statutory provisions, and determine the meaning or applicability of the terms of an agency action. The reviewing court shall - (1) compel agency action unlawfully withheld or unreasonably delayed; and (2) hold unlawful and set aside agency action, findings, and conclusions found to be - (A) arbitrary, capricious, an abuse of discretion, or otherwise not in accordance with law; (B) contrary to constitutional right, power, privilege, or immunity; (C) in excess of statutory jurisdiction, authority, or limitations, or short of statutory right;
(D) without observance of procedure required by law; (E) unsupported by substantial evidence in a case subject to sections 556 and 557 of this title or otherwise reviewed on the record of an agency hearing provided by statute; or (F) unwarranted by the facts to the extent that the facts are subject to trial de novo by the reviewing court. In making the foregoing determinations, the court shall review the whole record or those parts of it cited by a party, and due account shall be taken of the rule of prejudicial error.

The FCC has dealt with the Morse exam matter more directly. The telegraphic examination was removed as a requirement to qualify for Technician Class operator license in 1990. In its Report and Order (FCC Record 7631), the FCC stated:

(a) "For the amateur service to achieve its purpose it must have the participation of as many qualified persons as possible who desire to pursue that purpose. Modern commercial and military electronic systems require engineers to design them, technicians to install and maintain them, and a technologically literate citizenry that can use them. The amateur service should, as it has in the past, attract technically inclined persons, particularly the youth of our country, and encourage them to learn and to prepare themselves where the United States needs expertise. We do not foresee that telegraphers will be in as great demand by future systems as will electronics and communications experts."

(b) "Telegraphy skill has been required for each person who has ever been issued an amateur operator license in the United States, including the current 493,000 licensees. Mastering the Morse Code was an arduous task for many of these licensees, and by developing their telegraphy skills they expressed their intense desire to become amateur operators. It is understandable, therefore, that there are licensees who are reluctant to share the amateur service frequencies with new licensees who have not made a similar effort to master the Morse code. We conclude, however, that telegraphy skill is not so essential to proper operation of a station that transmits exclusively above 30 MHz such as to justify turning away otherwise qualified persons who do not possess the skill. The Notice, furthermore, did not propose to delete the telegraphy skill requirement for a licensee to be the control operator of a station transmitting below 30 MHz where telegraphy communications take place extensively and worldwide communications are possible. The sharing of frequencies between codeless class licensees and other licensees can take place on frequency bands above 30 MHz where telegraphy operation is minimal and where the transmission of the more modern emission types such as data, image, phone, pulse, RTTY, and spread spectrum, predominate."

(c) "We do not concur with the comments alleging that the passing of a telegraphy examination is an indication of the examinee's good character, high intelligence, cooperative demeanor, or willingness to comply with our rules. These traits are also found in individuals who have not passed a telegraphy examination rather than being exclusive to those who have passed such a test. For regulatory purposes, passing a telegraphy examination is no more and no less than proof of the examinee's ability to send and receive texts in Morse code at some specified rate. With respect to comments that make claims for the superiority of telegraphy over other types of communications, we do not consider these arguments as germane to this proceeding. The Notice did not propose to discontinue the authorization of telegraphy CW emission types on any amateur service frequency. The amateur service in the future, as it has in the past, can provide to those who personally desire to do so the opportunity to communicate by telegraphy."

The 13 and 20 word per minute telegraphy examination was removed as a requirement in 1999. The FCC stated in its Report and Order (FCC 99-142) for WT Docket #98-143 that:

(a) "the public interest will best be served by reducing the telegraphy examination requirement to the minimum requirement that we have found that meets the Radio Regulations" ;

(b) "an individual's ability to demonstrate increased Morse code proficiency is not necessarily indicative of that individual's ability to contribute to the advancement of the radio art" ;

(c) "such a license qualification rule [Morse code exam] is not in furtherance of the purpose of the amateur service and we do not believe that it continues to serve a regulatory purpose" ;

(d) "the amateur service is fundamentally a technical service, the emphasis on Morse code proficiency as a licensing requirement does not comport with the basis and purpose of the service" ;

(e) "reducing the emphasis on telegraphy proficiency as a licensing requirement will allow the amateur service to, as it has in the past, attract technically inclined persons, particularly the youth of our country, and encourage them to learn and to prepare themselves in the areas where the United States needs expertise" ; and

(f) "telegraphy proficiency is not a significant factor in determining an individual's ability to provide or be prepared to provide emergency communications" .

The Morse code requirement is finished. Give it up before you destroy the entire Amateur Radio Service.

Larry, KC8EPO

Cecil likes to ignore reality. He doesn't even admit that radiotelegraphy is the most basic, easily implemented, widespread and universal form of radiocommunication.

Not only that-- I'd far rather give up much of UHF/SHF to commercials
for their use for "intentional radiators" than to see them stuff our HF
bands with part 15 devices which are a far greater threat to the meat of
ham radio over the long haul.

Cecil prefers to ignore the certain fact that knowledge and skill in
the most simple, easily implmented, widespread and truly basic
radiocommunications mode could and easily *should* be mandatory for ham
radio operators, as a basic reqirement. Failure to assure this by the
FCC constitutes the beginnings of abandonment of oversight in a probable
prelude to similar eventual abandonment of the Service as no longer of
value in the "public interest, convenience and necessity". The
enforcement headachescaused by further anarchy caused by the influx of
licensees who, having invested no meaningful personal time, resources
nor effort, have no vested interest in adhering to the rules will only
hasten that conclusion.

 In other words, he's full of crap and he knows it. And is PROUD.

So go ahead and take that to its logical extension- demand nothing from anyone, just let them do whatever they wish with no requirements whatever. I guess that's the Libertarian way.

Quite rational given that radiotelegraphy is the most easily
implemented, universal and truly basic method of radiocommunication.
Surely all hams should be requred to know the basics.

Project the dozen who post here into the general ham population and
you get tens of thousands.

So now you're criticizing hams with amps and antenna farms? (many
of whom run CW) The other night during our CW QSO, someone turned
on his amp so I could hear him.

Agreed, however Morse code skill should not be considered as important
as everything else in ham radio combined. But a 5wpm Morse code
exam is given equal (50/50) weight to a written exam on all other
ham radio topics including rules, regulations, safety, and theory.
Fold the Morse code exam into the written exam and that problem
goes away.

That's your illogical extension, as usual. Test only the things that
are important enough to need testing for an entrance exam.

Dick, the FCC disagrees with you. Bitching, whining, and moaning will
not bring back the past. When are you going to accept the reality
of the 21st century? It is up to individual hams to promote the use
of CW.

Dick Carroll wrote:

> Cecil likes to ignore reality. He doesn't even admit that radiotelegraphy is the most basic, easily implemented, widespread and universal form of radiocommunication.

Neither does the FCC, Dick. And I'll bet you $1000 that Morse code is not universal. Please prove that one other place in the universe (besides earth) uses Morse code. Even on earth, probably less than one tenth of one percent of the population knows Morse code. Universal indeed.

Talking is basic to Homo Sapiens, Morse code is not. I can build an AM transceiver faster than someone can learn Morse code and build a CW transceiver. The spread of CW is getting more narrow all the time. 2/3 of US hams use it rarely or never.

CW is a fun mode for some but it is just another mode and should be optional like any other mode. What is wrong with live and let live?

Kind of a silly example, wouldn't you say? A vast majority has never fired a thermonuclear device either, and yet they would have you believe that based on their feelings and opinions, you should have to give up your personal thermonuclear device, if you had one.

Or taken even further, take the anti-drug crowd - the vast majority of them have never even shot heroin, and yet they would have you believe that based on their feelings and opinions, you should have to give up your needle.

DumbassWoger wrote:

> Just why the heck would anybody in his/her right mind pay the ARRL to be a
> member? For what?

Because it is the only national ham radio association in the US, and as such is the sole protector of every US ham's interests, rights and privileges. Because without it, ham radio would cease to exist after losing every Hz of spectrum to special interest groups who, unlike you and your CB buddy, are well organized and represented.

> Who cares?

Whoever cares about the future of ham radio, not only in the US, but in the entire world.

> The ARRL is losing members day in and day out. They have to ask themselves,
> "Why?"

Provide data to support this claim, please.

> The real reason for this loss of members is simple.
> 1. It costs too much and you get nothing back.

Bullshit. See above. What's the cost nowadays, $34? You mean to tell me that you "can't afford" lousy $34 to be a part of the organization that protects *your* interests? You probably blow more than that daily on beer.

> 2. The magazine is too full of voting and political agendas.

Bullshit. Nobody forces you to read those pages, nor the rest of the magazine for that matter.

> 3. Nobody really cares about the ARRL.

Bullshit. Nobody meaning you.

> 4. The ARRL really doesn't care about you.

What do you want? Flowers for Valentine's? Chocolate on your pillow?

> 5. The ARRL has an agenda that does not help Hams.

Ah, yes. Now we're talking... They shot Kennedy, too, didn't they? And they covered up the Roswell conspiracy.

Sorry, I hit the send button before responding to this. Anyway, unless your name is Bill, I wasn't trying to "sell" you on anything. And, since you want to be so huffy about this, let me add that I was also one of those who cared enough to do it - when I was about thirteen in the Boy Scouts. Since then, I grew out of flashing messages with my Boy Scout flashlight and beeping messages to kids on the playground with my little decoder ring. Since then, I learned the best way to communicate is to talk, and I have used my knowledge about radio to improve my station enough to do that

effectively without having to resort to an 18th century telegraph key.
Perhaps you should learn more about radio so you can do the same. :-)

Certainly not. For example, I don't use HF phone at the present time;
that hardly makes me less of a ham. In order to overcome the challenge
of my apartment-dwelling operating environment, I am required by
circumstances (not "forced" whatsoever) to employ much more skill,
patience, and ingenuity to my operating practices than hams who can
use full power and high-gain antennae. Keep in mind, I operate on three
HF modes: CW, RTTY, and PSK31.

\>Maybe he
\>uses three more modes than you do. You have already lost the war. You

>need to work on your delusions and get on with the rest of your life.

I seriously doubt it. I believe you'll find most amateurs are hard pressed
to employ two modes. I certainly tend, as most hams do, to spend the
majority of my time on the mode I like best: CW. However, this requires
a great deal more operating skill than merely speaking into a microphone;
therefore I, and all other primary CW users, have a legitimate claim to
superiority as hams. The approximate breakdown of my operating time
vs. mode would be CW: 80%, RTTY: 19%, PSK31: 1% (mainly due to lack
of very many new users to work).

>> In an age where people from all walks of life now have access to instant,

>yourself to learn it. Seems the reason you want to keep it is that you
>were forced (required by circumstances) to do it so you want everyone
>else to befall the same fate. You were born too late for that.

Your statement that having all HF amateurs be "required" to learn
and be tested on Morse code is to "befall" my "fate" exposes your
true agenda vis-a-vis the "force" argument. You consider it to be
something onerous, depressing, and unfair. My youthful objections
to learning and being tested on CW were, by my own admission,
a result of an immature and uninformed outlook. Apparently, as I
have grown, you have not.

>> You say you "paid the price" of your ham ticket by taking a 5 WPM code

>
>What's this "us" thing? You got a mouse in your pocket?

Well, it obviously doesn't include you, Cecil, so don't sweat it.

Larry, anyone
>with a valid amateur radio license is a real ham.

Not exactly. Anyone with a valid amateur radio license is a real
amateur radio license holder...just like a "member in good standing"
in a radio club is one who paid his dues! It is a basic qualification,
not the whole enchilada. To be a "Real Ham" requires more than
the basic piece of paper. As I've said many times, this includes
(but certainly is not limited to) a knowledge of the Morse code at a
practical operational skill level.

If you don't believe
>it, ask the experts on the subject, i.e. the FCC.

The FCC are not experts at what makes a "Real Ham." They are

strictly concerned with the basic, minimum qualifications -- which is
a legitimate function of government to ensure that a valuable resource
(the RF spectrum) is being utilized legally and efficiently. They
cannot and should not be concerned with what comes afterward...the
knowledge, skill development, and operating skill that defines a "Real
Ham" in the classic sense. They are not concerned with that, since
it is not a function of government.

>Ahh.....
>Now might be the time to see if the commercial users can hack the
>jamming that such a situation could lead too !!!
>But then that would be anarchy...

Martin:

However, the commercial interests are more financially able to deal
with the "jamming" than *amateur* radio operators are! And, once
they gain primary access to a frequency allocation, they are legally
protected from said "jamming." Mr. Hollingsworth could well find
himself enforcing hams that are using *former* amateur frequencies --

for the benefit of the commercial interests that gained access to them due to our inability to effectively utilize them. How ironic.

73 de Larry, K3LT

Addendum:

I just read Phil Kane's reply to this, and as usual, he said it much better than I could. If you were planning on doing any of this "jamming," you'd be well advised to reconsider.

Cecil:

I don't believe that such an immature, uninformed, and specious assessment of my thoughts reflects much credit on your own point of view. Truly, the "selfishness" exists among hams like yourself who feel justified to tie up potentially billions of dollars of legitimate commerce just so a tiny minority of hobbyists can play with radio toys. We can no longer justify that on the basis of "technical progress." We, as hams, are no longer in a position to be the prime developers of RF technology. Those of you who claim that we are are kidding yourselves. Moreover, your inability to read the handwriting on the wall exposes your own selfish agenda. The one thing that is certain is that there will be change -- and I don't think you're going to like it. For people like me who can see it coming, it will be much easier to adapt. As a ham, I wouldn't want to be you in a few years.

>

Dwight:

These are the usual specious and self-serving arguments of the NCTA. The reason for the code testing requirement is, and always has been, simply to ensure that radio amateurs possessed the skill and ability to effectively employ the Morse code in amateur communication. This purpose has never limited or excluded development of any other mode. There is no connection between the Morse testing requirement and any technical or operational development within the realm of amateur radio -- or any other radio service. The Morse testing requirement is a means to an end -- not a limiting factor. It's purpose does exist today - and is a current and valid as it ever has been. The requirement is being dropped due to the overwhelming laziness, demotivation, and indifference of the general public...and the desire of the ARRL and the equipment manufacturers to "consumerize" the ARS to the greatest extent possible while it still exists. As always, follow the money, and you will learn the truth.

if they aren't there check other 10kc steps up and down the band. that station is heard also on 28085 (channel 19 up 1) and other channels on 10kc steps up to at least 28295.   and while you are at it check out all the U.S. truckers on 28085 and the rest of the band... 28535 (channel 19 up 2) is another frequent hangout, though i have heard them as high as 28755 (channel 40 up 2).

and don't forget my reward fund for catching an intruder, see http://www.k1ttt.net/ for more info.

ronc-no-spam@cotse.com wrote:
>
> Fellow Hams:
>
> There has been lots of discussion about whether or not we should use jamming as a technique to get the intruders off 10 meters. Here is a way to test my theory that it works: Lets pick a common target and jam the hell out of it! Here is my suggested target: A commercial taxi dispatch operation regularly heard on 28.055. The base station uses a two-tone "roger beep", and is often heard calling a station "viente quatro", Spanish for "24". Viente Quatro can be heard with signals of 59 +10 to 20 in California at a bearing of SW, between 2200 and 0300 UTC. It would be interesting to get bearings from other parts of the world to try and locate the station.
>
> Here's why it will work. This is a commercial operation, and if we deny them the ability to dispatch their cabs, they will lose money and go elsewhere. If we hit the frequency with a cacaphony of QRM whenever the stations are heard, they will soon go away and the frequency will return to our use.
>
> So warm up those kilowatts and blast away! Keep hitting the dispatch over and over, every time she calls a mobile! Keep pounding her with CW, RTTY, MFSK-16, PSK-31, Testing, tuning, or if you're in Canada, use phone...it's legal there. The FCC can't stop these yo-yo's, so it's up to us! Let's put Viente Quatro off the air!

>Are you using the colloquial/slang "real ham" there, Dick? "Ham"
>is in my dictionary. It says: "ham - 2. an operator of an amateur
>radio station." So what's your official definition of a "real ham"?

Cecil:

The term "Real Ham" was coined by yours truly in the Fidonet Ham Radio echo almost ten years ago. It means exactly what *I* want it to mean. My definition of "Real Ham" is a person who fully embraced the art and science of AMATEUR radio; who explores ALL operating modes but recognizes the special nature of the Morse/CW mode as the most uniquely practical, effective, efficient and universal electronic communications mode, and embraces the notion of a requirement for testing in Morse code to ensure practical proficiency in this important mode. The Real Ham realizes that amateur radio is now a stand-alone service, unaffected in basic concept by the economic and technological realities of other radio services, and must continue to provide a basic, simple, and robust backup capability based on operator knowledge and skill. The Real Ham knows that amateur radio is more than yakking into a microphone, winning contests, and collecting wallpaper. Most importantly, a Real Ham does not whine, complain, or make specious, self-serving arguments against progressive, multi-level Morse code testing requirements, whether or not he has taken and passed them. A Real Ham does not have to possess anything even remotely close to professional-grade technical skills -- but he must be technically involved at the AMATEUR level and able to hold his own when dealing with the technology common to the Amateur Radio Service.

This is what a Real Ham should be. Do YOU qualify?

No one is getting huffy but I do have a certain difficulty calling a manure pile a 'fertilizer storage facility'. New does not imply good, old does not imply bad. All things in context.

The context here is a lot of breast beating self-justification for not taking the code test. We can talk coulda, shoulda, hafta from now til Independence Day but the cosmic interplay of choice and chance has made it a requirement to do 5wpm in the easiest manner possible for at least the next five years.

What you choose to do about it if anything is purely up to you. You don't have to justify it to me or anyone else. If it is a self-worth issue, it is YOUR self-worth issue. So stop with the justifications already. It is not about the mode, it is not about VHF-UHF vs HF, it is about a code test that is more of an inconvenience than a hurdle for most people. Obfuscation merely irritates.

It is particularly irritating when the audience is composed of people who, for whatever reason and by whatever method, passed a code test. There is a time and place to call golf a stupid game -- the gallery at the Masters is more than likely not that time or place. Preaching the Gospel on the road between Mecca and Medina is not the best context either. So why in hell are you doing it?

Dick N�BK

Except this is not a court scenario...nor is the FCC arena when it asks for or otherwise accepts comments on rules. One need only examine the use and role morse code now plays in any communications service to see it is significantly diminished in need. The value of code to an individual on a personal enjoyment basis is not the rational the FCC uses in determining value or need.

Additionally, as a counter-point to your court "expert-witness" scenario, you must admit that in the end, it is the jury of people that do not possess that expertise that makes the decision.

By the way, it doesn't take that much effort to be deemed an expert witness in most cases. The opposition will use its crossexamination time to discredit any expert witness...but in the end it goes to the jury for the final choice.

Cheers,
Bill K2UNK

No such implication can be made from that statement.
By current regulations, hams are hams with or without
morse knowledge. That has been so for 10 years.

>> Every ham has a choice of his/her >favorite mode(s).
>

Absolutely false...as already stated above.

Cheers,
Bill K2UNK

I agree. I have never suggested that code,, as a mode, not
be included in the overall knowledge base.

That has been Larry's mantra for years now. It is false
today because there is no absolute need to have any ham
possess the skill in the first place. Additionally, it is
absolutly clear that the FCC sees no reason to ensure
such knowledge beforehand for no-code techs who are
free to use code all they want on VHF without ever having
been first tested on that skill.

This
>purpose has never limited or excluded development of any other mode.

Nor has your claimed purpose ("to ensure") limited or excluded use of morse by non-code techs.

>There is no connection between the Morse testing requirement and any
>technical or operational development within the realm of amateur

Yes Larry, the great conspiracy theory. Consider the following analogy....

The requirement (to be able to use a manual shift transmission) was dropped due to the overwhelming laziness, demotivation, and indifference of the general public...and the desire of the AAA and the automobile manufacturers to "consumerize" the driving public to the greatest extent possible while it still exists. As always, follow the money, and you will learn the truth.

Cheers,
Bill K2UNK

Agreed now.  That was not the case prior to last year because
the treaty never had any speed requirement.

>Of
>course, that treaty will likely change in the next few years by dropping the

Agree again.

Cheers,
Bill K2UNK

Will all those that accept Larry's definition of what
a "Real Ham" is please vote now.

That's not the implication at all. This ain't rocket science. Hams who want to use Morse code learn it and use it. Hams who don't want to use Morse code don't learn it or don't use it and forget it. Hams are hams whether they know and/or use Morse code or not. I know quite a few hams who learned Morse code and NEVER used it at all. They simply didn't like it.

There were many thousands of early Technicians who passed a General written exam and a 5wpm code test who never copied a single character of code after that. They were issued 1x3 calls starting with a 'W'. In those days, you couldn't tell a Tech from a General by knowing his call. Everyone with an amateur radio license was a ham.

According to the ARRL survey, a majority of hams use CW "rarely or never". Would you say a majority of hams are not "real hams"? I got news for you. "The Amateur's Code" doesn't mean Morse code. What is wrong with live and let live?

You're showing your age, Larry, actually the lack thereof. Two
of the specific reasons for hams to know Morse code in the past
was interference mitigation between radio services and to provide
a pool of trained CW operators (for the military).

> This
> purpose has never limited or excluded development of any other mode.

Read the purposes of the amateur radio service. No mention of Morse
code or any specific mode. Apparently, those purposes can be met
without knowing Morse code.

> The Morse testing requirement is
> a means to an end -- not a limiting factor. It's purpose does exist today -
> and is a current and valid as it ever has been.

CW is no longer required for interference mitigation as almost all of
the other services have dropped its use. A pool of trained CW operators
is no longer required by the military. The reasons for knowing Morse
are being buried in the sands of time. Personal choice is the only real
reason left besides an old treaty that will probably be changed. What is
wrong with live and let live?

I distinctly remember the term being applied in the early 50s to Generals/Extras VS Conditionals/Techs/Novices. "Real Hams" took their exams at an FCC office, not by mail. Sorry Larry, the term "Real Ham" was coined long before there was a Fidonet.

> This is what a Real Ham should be. Do YOU qualify?

What reward do I get if I qualify?

I enjoyed learning Morse code in Cub Scouts before you were born and long before I ever heard of amateur radio so your statement is simply ridiculous nonsense. You are the one who objected to learning Morse code, not I. I enjoyed the heck out of learning Morse code. I could already do 5wpm before I ever heard about the Novice ham license.

> The FCC are not experts at what makes a "Real Ham." ... They are not

It is also not a function of something pulled out of your posterior.

Oh, I agree that amateur radio has seen better days but I think
the present threat is mostly VHF/UHF. I think HF amateur radio
will outlive me.

The point is that I will be sad to see ham radio go down the
tubes and wish to postpone it as long as possible by increasing
the ham population. You seem to be wishing for its destruction
and indeed, seeking to hasten that destruction by advocating
obsolete requirements which will decrease the ham population.

Specifically, they can only make their determination by weighing the evidence presented during the trial. They are not allowed to consider any personal opinion or facts other than what has been admitted as evidence in determining guilt or innocence.

> By the way, it doesn't take that much effort to be deemed
> an expert witness in most cases.

True, you just have to show the court that you have the experience and expertise of the subject necessary to validate your opinions, and therefore allow them to be admitted as evidence.

> The opposition will use its crossexamination time to discredit any expert
> witness...

They will try... But this is how the game is played. Nevertheless, the court will recognize a person as an expert witness based on their qualifications. If they are qualified to testify as an expert witness, their opinions will be entered into the case as evidence. The jury will never be allowed to hear a layperson's opinions.

>but in the end it goes to the jury for the final choice.

Again, to be based solely upon the evidence presented during the trial, not their personal opinion or feelings on the subject.

How about 'a plague on both your houses??'

Any requirement screens out somebody. So a 25wpm entry level will indeed screen out some worthy 16-20 ops who have no place to practice. That it can be done by people from all walks of life, presumably including wandering bindlestiffs, is interesting and true but hardly a good reason to block entry. OK, it is somewhat reductio ad absurdum but entry-level at least does not need to carry requirements much beyond keeping the Tyro from being a danger to himself and a pain to others. Subsequent tickets should carry requirements and privileges somewhat in keeping with each other or some other national purpose, e.g. development of a pool of competent ops in something.

Increasing a ham population in and of itself a) is pointless, and b) may in fact have the opposite effect. Gresham's Law: Bad Money drives out

Good applies to things other than coinage. When it is all said and done letting anyone with a personal problem and a microphone into the hobby will ultimately create a band of people with personal problems and mikes and precious little else. While the 'after me the deluge' theory can and has been overdone it is wise to remember that Louis XV was right.

I am quite honestly amazed at the reaction to the 5wpm thing now that it has been around for over a year since announcement. One expected and got a few tons of instant upgrades but that died after three months. But cutting the 13wpm to five seems to have aroused a major storm of apathy in codeless circles. The VEs are back to 'you shuffle and I'll deal'.

Just how far should one go to increase the ham population? Do we put licenses in Post Toasties boxes, Cecil?

Dick N�BK

Richard McCollum wrote:

> Just how far should one go to increase the ham population?

Far enough to ensure that there are enough amateur radio
operators to perform the functions that justify the existence
of the ARS and its assigned radio spectrum. Eliminating
unnecessary requirements is a step in that direction. Would
you and your family rather die or accept emergency assistance
from a ham who doesn't know Morse code?

With your alleged intelligence one would think you could understand terms like
"basic, very effective, most simple, easiest to implement under the most austere conditions". All of which describe radiotelegraphy. But you choose to ignore those descriptives in favor of your personal choices in the ongoing effort to rid ham radio of CW.
We know, Cecil, all the other techies would dump you like a prince turned into an ugly frog if you said what you actually know to be true.

I strongly disagree with the subjectline here...
Also, considering that itis someones opinion on the subject, I'll take it with
a grain of salt...

I might also want the original poster of this to realize that all hams
agree (by act of possession if the amateur license) to proper rules of
conduct as set forth in the Rules of the FCC (at least in the US,
its territories and possessions).

Here the ARRL report on the recent CEPT change.

****
The ARRL Letter
Vol. 20, No. 12
March 23, 2001
****

* Europe Adopts 5 WPM as Morse Code Standard: The Conference of Postal

and Telecommunications Administrations--CEPT--has effectively lowered the Amateur Radio Morse code test speed to 5 WPM for all European countries. The CEPT Radio Regulatory Working Group (WGRR), meeting last month in The Hague, adopted a revision of Recommendation 61-02 to include the 5 WPM standard.

The European Radiocommunication Office published the revised version of T/R 61-02 this month. The revision, which establishes requirements for the issuance of a Harmonised Amateur Radio Examination Certificate (HAREC), reduces the Morse requirement from 12 WPM. "In revising what is known as the CEPT Recommendation T/R 61-02, it has in effect recommended to 44 European countries to adopt the 5 WPM standard," said Wireless Institute of Australia-Victoria President Jim Linton, VK3PC, who closely follows global developments in Amateur Radio Morse code trends. Additional information is available on Linton's Morse code watch site, http://www.wiavic.org.au/mcw .

More information on CEPT is on the ERO Web site, http://www.ero.dk .

If an expert witness testified the sky isn't blue, would they
be required to accept that as fact? The reality is that
the jury gets to make their own determination as to the
accuracy of whatever they hear is. They do not automatically
accept everything as fact.

Cheers,
Bill K2UNK

I don't want to rid ham radio of CW, Dick. Each and every one of those digital communications experts understands the usefulness and utility of CW, whether they use the mode or not. I encourage all hams to learn Morse code and try CW. It's fun for me and sometimes useful. What I object to is the Morse code *requirement*, but you know that already. You seem to think eliminating the Morse code requirement is the same thing as ridding ham radio of CW. In that, you are simply delusional.

73 is not plural. 73's is the plural of 73. That's the way we
pluralize numbers in the English language. 73 is a number and
more often than not, has nothing to do with Best Regards.

Best Regards is plural but we can certainly have Lots of Best
Regards. We can even have Lots and Lots of Best Regards.

> nor much of anything else?

Cheap shot, Dick. Actually I think the day of Morse AS A TESTING
REQUIREMENT is over and its end will probably be positive for the mode as
it causes chaos in the wideband areas of the bands. Even having passed
the 20wpm I never saw any sense in anything beyond 12.

BUT

1. Will it in fact increase the number of ops when we finish re-arranging
the deck chairs? I am not certain things not worked for have value.
Might not some civilized people simply let the barbarians have it?
Cheapening the product killed Schlitz, the second-largest brewer in the
USA at one time. The inherent self-policing of which the ARS has taken
pride, without much justification of late, for many years even if it did
exist could not withstand an onslaught of echos and Roger beeps.

2. It is interesting to note the lack of interest in even a 5wpm standard
for hf. We get justifications out the wazoo for why it is not taken but
little actual upgrading. I don't give a big hoot whether he knows CW or
not but I would like to see some evidence OF commitment rather than prima
facie evidence FOR commitment.

Cecil:

That was the reason then, but the reasons for code testing change
and grow with the passing of time -- the same way you don't.

>> This
>> purpose has never limited or excluded development of any other mode.
>
>Read the purposes of the amateur radio service. No mention of Morse

I don't recall ever saying they did. The reason for code testing doesn't
have to be stated in the Basis and Purpose of the ARS in order to be
valid, except to assist you in making another strawman argument.

>> The Morse testing requirement is
>> a means to an end -- not a limiting factor. It's purpose does exist today

>is no longer required by the military.

And the relevance of this to the Amateur Radio Service is...?

>The reasons for knowing Morse
>are being buried in the sands of time.

Again, only if you are grasping at straws in a feeble attempt to justify dropping the requirements.

>Personal choice is the only real
>reason left besides an old treaty that will probably be changed. What is
>wrong with live and let live?

"Live and let live" has never been the issue. Participation in the Amateur Radio Service is strictly voluntary, as is acceptance of the licensing requirements. By saying "Live and let live," you're really saying "Give it away for nothing to anyone who thinks they wannabe a ham." Sorry, but I don't subscribe to that kind of touchy-feely, politically-correct, liberal, Communist, Socialist, Welfare-State thinking. That's your schtick, Comrade Cecil.

>Oh, I agree that amateur radio has seen better days but I think

>the present threat is mostly VHF/UHF. I think HF amateur radio
>will outlive me.

Cecil:

I don't disagree with that -- but I believe that we hams share access to far more spectrum than we could possibly employ with any kind of effectiveness or efficiency in the region above 500 MHz. Therefore, I'm not inclined to fight tooth and nail to preserve our allocations there when they can be used much more productively and profitably by commercial interests.

>The point is that I will be sad to see ham radio go down the
>tubes and wish to postpone it as long as possible by increasing
>the ham population.

And exactly how do you propose to do that? So far, the net effect of Restructuring has been some "paperwork" upgrades to General class of Techs who already had taken a 5 WPM code test sometime since the discovery of electricity. The numbers of new hams is way down. And the new Generals aren't even bothering to go all the way up to Extra.

Do you really think that going from 5 to zero WPM for HF access is going to change this scenario? Again, all we'll get is more free upgrading due to grandfathering of all remaining Techs. How will our numbers increase? What is going to drag all these brilliant young techno-genius whiz-kids away from the Internet and put 'em on HF 'phone with the retirees down in Florida giving their daily Bowel, Bladder, and Surgical Procedure reports? C'mon, Cec... answer the question!

>You seem to be wishing for its destruction
>and indeed, seeking to hasten that destruction by advocating
>obsolete requirements which will decrease the ham population.

I'm not wishing for a damn thing. I'm just telling you what should happen and what's going to happen -- like I have been for over a decade now -- with perfect accuracy!

Dwight:

OK -- I hereby challenge you to "talk" to hams in 100 countries using
less than 5 watts output and simple wire dipoles -- any band, voice modes
only.  I've already done this in CW -- let's see you do it with a microphone.
Or can't you "improve your station" enough to make it as effective and
efficient as mine?

Dwight:

You'd better do something to attenuate those harmful UV rays. An
old friend and Air Force mentor of mine is now battling with skin cancer
as a result of same. A word to the wise is hopefully sufficient.

>use of morse by non-code techs.

Bill:

Don't look now, but CW has never been a primary mode on VHF. Admittedly, CW is important to the more esoteric VHF operations such as satellite and moonbounce, but these more technically-challenging techniques are usually prosecuted by CW-proficient hams, also usually Amateur Extra-class (pre-4/15/00), and not the 2-meter FM repeater jockeys that form the main body of No-code Techs. Nice try, but no cigar.

>>There is no connection between the Morse testing requirement and any
>>technical or operational development within the realm of amateur
>>radio -- or any other radio service.
>
>Agree completely.

If you agree, then why is this the primary argument of the NCTA's? By your own admission, it is a strawman. Therefore, since the prime argument of the NCTA is false, then so is their entire no-code campaign. You have just declared the PCTA's the winner of the code/no-code debate. Thank you very much!

>>The Morse testing requirement is
>>a means to an end -- not a limiting factor.
>
>That end being what?

The raising of a sufficient number of proficient CW operators to ensure that radio AMATEURS retain the important benefits and advantages of this mode.

>> It's purpose does exist today -
>>and is a current and valid as it ever has been.
>
>That purpose being?

The raising of a sufficient number of proficient CW operators to ensure that radio AMATEURS retain the important benefits and advantages of this mode.

Bill, my new 2001 Toyota Corolla LE has a 5-speed manual gearbox.
It gets over 42 MPG highway mileage, >30 MPG in city driving. It has
much better performance, lower emissions, and at least 15% better
fuel economy than the comparable automatic transmission model of
the same automobile. It is also simplicity itself to drive, because I have
accepted the challenge of mastering the technique of driving with a
manual transmission. There you go -- another one of your best
arguments with the heck shot out of it. This is getting too easy.

Cecil:

Wrong again. Dick is simply being logical. For most prospective hams of the past, the code testing requirement at incentivized proficiency levels was the only reason why they made an attempt to learn the Morse code and gain useful proficiency at it. The current reduction of code testing requirements is not attracting any significant numbers of new licensees. It is only generating upgrades based on grandfathering, and total elimination of the requirement will only do more of the same. In the meantime, few, if any of the new or newly-upgraded hams are appearing on the CW segments, seeking to increase their CW proficiency. All they are doing is seeking to increase the efficiency of their PTT buttons. Reducing the code requirements is not only reducing the numbers of CW operators, it is reducing the total number of hams, since there is no longer any meaningful challenge for intelligent and motivated prospective hams to master. Welcome to the future of ham radio. Can you say "reallocation?"

Why? You seem to be suggesting that morse code is a requirement just because it exists, with no further reason for it other than the fact that it does exist. To say that, you would have to ignore the history of ham radio, the history of morse code as a means of communications, and how those relate to the history of radio development as a whole.

> [snip] The requirement is being dropped
> due to the overwhelming laziness,
> demotivation, and indifference of the
> general public... [snip]

Nonsense. The requirement is being dropped because the technology, and capabilities of that technology, have changed. Code no longer offers that much of an edge over the other modes when it comes to reliable communications. It is as simple as that.

Okay, using your own words, why are we treated to this self-serving observations on the obvious? I'm fairly certain all of us know the current state of affairs when it comes to the code test, so all that "coulda, shoulda, hafta," nonsense is just that.

> What you choose to do about it if

Again, and again using your own words, why are we treated to this self-serving observations on the obvious? Of course what I choose to do about it is up to me, and of course I don't have to justify it to you. Why state the obvious?

> It is particularly irritating when the

> why in hell are you doing it?

For the exact same reason that the person who passed the code test made the statements he did. And for the same reasons you made the statements you did. And both of those collection of statements were just as irritating when the audience is composed of people who, for whatever reason, have decided against the code test.

That is an absolutely ridiculous statement, Larry, unless of course, it is tongue-in-cheek humor. First the hams bands were going to be flooded with masses of unwashed CBers and freebanders but now the number of hams are being reduced because the Morse code requirement is being reduced???? All it means is that it appears that reducing the Morse code requirement, by itself, is not enough to save amateur radio.

If ham radio is going to be saved in the long term, something is going to have to be done to make it more attractive. Ham radio has competition that it didn't have 50 years ago. It simply may not be able to compete in the modern world. It may be going the way of the barnstormers.

Local SSB ragchewing is more *effective* for a lot of hams, Larry.

It is also something that you were NOT required to do. What is wrong with
live and let live? Why do you want to force all drivers to learn how to use
a manual transmission? If you don't want to do that, you analogy to Morse
code falls flat.

A better translation:

If the Amateur Radio rules can not allow reasonable and lawful public access
to
the HF bands, why continue the service? The cost of continuing the
Morse code exam may be a lose of spectrum or worst, the entire service.

Read it again. The Court noted that "the problems of regulation are rendered more difficult because the broadcast industry is dynamic in terms of technological change; solutions adequate a decade ago are not necessarily so now, and those acceptable today may well be outmoded 10 years hence."

Dave, thing change, now it time to change the rules.

Then fix the written exam, don't hang on to a superfluous code exam.
It's like the Q&A are published for driver's licenses so examinees
will be tested on cranking an automobile engine. Effort for effort's
sake is not a valid reason for an exam.

The two main reasons for hams knowing Morse code, mitigation of
interference among radio services and a trained pool of CW operators,
are not valid anymore.

In article <3ab8ec74_1@huge.aa.net>, ai7w@NoSpam.com says...

> This post mis-represents the official position of the QCWA.
> In fact, QCWA supported the introduction of the no code tech license
> and supports the elimination of the incentive licensing program.
> Steve

I'm glad to hear that, Steve. I was pretty certain the boob that started this mess was misrepresenting things, but thanks anyway for the clarification.

Of course there is, Dave. I personally have a ham life on HF.
That's about the only ham life possible in Madisonville, TX.

Live and let live is allowing an HF ham to choose his first mode.
Right now, he has no choice. He is forced to make OOK/Morse his
first mode.

> > An HF ham is not allowed to use any mode until
> > he/she has first used Morse code to pass the exam.
>

How can you say "not true". My statement and yours mean exactly
the same thing.

When I was in San Jose around 1973, the Mt. Umunum (sp?) repeater
was jammed by some character who hid a fox hunt transmitter in
a hollow tree in Big Basin National Forest. We had a heck of
a time finding it.

Best place to look for it might be the same place where they gave rationale
for keeping any of the other requirements - wherever that is.

That's not true. I'm an HF ham, and FM was my first mode. Most hams start on FM. You're an anarchist, I think. ;-)

> > > An HF ham is not allowed to use any mode until

Only non-HF hams and unlicensed people need to take a code test in order to operate HF. HF hams are the one group of people who can claim they don't have to take a code test before they operate HF ham bands - by virtue of the fact that they've already taken at least one. Otherwise, we wouldn't call them HF hams. Right? :-)

whats with everyone and code? does it make you a better operator? I doubt it
... you wouldn't believe the s9 signals I get from someone deciding that
29.1MHz is a great place to go for cw (with a bad fist I might add).
Besides that, I can outsend anyone with a straight key or paddle when I use
the computer to send it for me (flawlessly I might add)

Correct, except that you can renew up to 90 days before the license
expiration date.

You can also renew online via FCC's ULS site
(http://www.fcc.gov/wtb/uls/), although some people find it a pain to
use.

Jon

I just knew that some idiot would answer this
question like that!

This poor fellow asks a legitimate question,
and the idiot brigade answers in full force,
simply because he mentioned that he
is/was a technician class licensee.

Let me ask you a few questions Dick.

Will passing a 20 wpm test make him a
better ham?

Did passing a CW test make you a better person?

Is being polite that difficult?

Remember what your mother said: If you can't
say anything nice, don't say anything!

73

Gary WG7X

Yeah, I passed the CW test at 20 wpm, so what?

That singular exception makes HF morse testing the law of the land, Bill
so it must have some bearing. That is certainly more than comes from a
homemade lawyer quoting from a court case between a commercial
television network and a national political party. Larry's chants of
his new age mantra are a bit premature.

But you weren't an HF ham when your first mode was FM. Mastering
the OOK/Morse mode is a prerequisite to becoming an HF ham so
your statement is moot.

That's exactly what I said and you disagreed.

See how silly this is? You could insert any number of things in place
of
the "ham radio" that I deleted - even CW. When people "don't want to",
there's nouse in "forcing" them, is there?

The two matters have very little to do with each other, Bill, no matter how much you might wish they did. Why can't our "I-found-a-law-book-under-a-tree" expert cite a case involving amateur radio? Could it be because there aren't any such cases?

So it needs to be made into something other than what it is. That has been alreready tried, rather unsuccessfully I might add. What we got was a generation loaded with whiners who want more and more for less and less.

Oh, I don't believe it had so much to do with that issue as it did the
direction the political winds were blowing.  We're in a new era of
political correctness--one in which no one's self esteem may be harmed
and in which we are all equally mediocre.

Five FCC commissioners = five political appointees who basically
rubberstamp staff proposals they can't find any political flaws in.

> Amateur Radio License class: none

BFD. Commercial radio licenses : None.
Radio licenses of any kind; None.

> License Restructuring Decision: delete 13 & 20 wpm code exam.

Whiners = gross numbers of dB of noise, hurt the ears of commissioners,
who gotta reduce the noise level.

> Go figure...

Figures lie. Liars figure.

That's one of the biggest pieces of misinterpretive crap I've seen in a long time, Larry. It certainly isn't a better translation for your statement. We already have reasonable and lawful public access and everyone has an equal opportunity for an amateur license.

I assume that you refer to a *loss* of spectrum or--*horrors*, the entire service. I'd hate to think that we are in danger of losing amateur radio because Larry Klose can't pass a 5 wpm code test.

It's supply and demand, Dick. How many hams are necessary and sufficient
to meet the goals of the ARS? Whatever that number is, the ARS needs to
be promoted and the requirements need to be adjusted. It works the same
as for an all volunteer army.

Larry, I read it again (only because you saw fit to post it again).  It
still says, in letters which stand out rather plainly to me, "...the
broadcast industry...".  I thought surely you'd notice those words on
second reading too.

You may have a point, Larry.  The rules of chess have been static for
far too long.  Let's get 'em changed.  Rooks should have two moves
during the period of play, in which they are permitted to move any
direction--sort of a chess "gimme".   In approaching an opponent's queen
(with any piece), the opponent must ask, "Mother may I?" before moving
his piece.

Dave K8MN

I used to have a grade school teacher who would occasionally ask a
student if he planned to learn anything or was going to continue wasting
air and taking up space.

Dick, they say no-one is perfect, but I think you are a perfect asshole.

The guy asked a reasonable question and deserved a reasonable answer, not some rant about how fast he can beep.

Hans

You need to renew it. And since you have a computer, and apparently an internet connection, one can assume you have a web browser and have used it. Therefore, it should be no trouble for you to surf to http://www.fcc.gov/wtb/amateur/amrenw.html and check out what you need to do in order to renew your license.

The FCC itself told you, if you can read. They ended the meical waiver
headache.

Probably for as long as they believe it has applicibiltiy to the amateur radio service and is important enough to require knowledge and skill in its use by US radio amateurs.
You can always hope their viewpoint changes sufficiently to get for you what you would have got for yourself had you been more of a "doer" and less a whiner.

 But effort in order to prepare oneself to use the most basic and easily
implememted radiocommunications mode is certainly justified.

 It's not at all surprising that you would miss it. MINE are legal.
Theirs, well you should know about illegal amps, but since you "talk to
those guys when I can't find a ham to talk to" I guess you prefer to
overlook them.

I just KNEW some idiot would be incensed by that reply...Just coultn't help myself, did it anyway.

You'd think that with a computer on the internet a fella would at least make a stab at looking for the information needed to renew his ham license, wouldn't
you? Makes it look like he has about as much interest in renewing as he did in getting a ham radio license in the first place - little to none. Just enough to ask someone else to do all the "hard" part for him.

Freebanders were not being discussed. In the context of
what was being discussed, what was your point?

Speech is basic to Homo Sapiens. Morse code is not. Morse code
takes weeks or months to implement. I cannot think of another
mode that is more difficult to implement than Morse code.

I once asked my boss at Intel, when did I start working there. He said,
"Are you asking when you showed up or when you started working?"

Yes. I don't know if you knew K9AAH, but he was our local retired FCC guy
and club member.   It was at least some comfort to know that 435 was just as
big a thorn in the side of the FCC as it was to the rest of us. Riley has
had a pretty big influence over there of late. You actually hear callsigns
on that repeater every once in a while!

I knew Jerry Man (a shortening of his legal name) and his family very well. He had a home in San Juan Capistrano and another one in La Jolla...stayed at the La Jolla place during the week and the Capistrano place on weekends. He retired on the same day and under the same conditions as I did. We used to see each other and trade war stories at the FCC Alumni and Survivors get-togethers, but it's sad to report that he passed away a few years ago.

They said it was because element 1a was sufficient to demonstrate code proficiency, and that 1b and 1c were more or less superfluous to that.

> In the absence of any rational to sustain such
> testing, it becomes pretty much a forgone conclusion
> that 13 and 20 wpm had become "arbitrary and capricious"

If those words were in their minds, they evidently kept them there rather than write them down in their comments.

The first mode I used was, and will continue to be FM - no matter what you say about it.

> Mastering
> the OOK/Morse mode is a prerequisite to becoming an HF ham so
> your statement is moot.

But I ran FM and SSB before I ran CW - because I was allowed to by the FCC. I had by no means mastered OOK/Morse when I first got on HF - nor was I required to. You heard me on the CW net a couple weeks back. Had I mastered OOK/Morse even as of that date? :-)

By the way, Hans graciously sent one of his QSL cards my way. I think it's suitable for framing. Quite elegant.

If I were you, I'd just renew your license because If you upgrade you don't
get a real ham license anymore. Though, some people are pretty proud in
obtinaing a nickle-Extra A.I.C.

The subject is HF hams and the Morse code prerequisite requirement.

> But I ran FM and SSB before I ran CW - because I was allowed to by the FCC.

But you were forced to learn the OOK/Morse mode before running FM and SSB on HF.

> By the way, Hans graciously sent one of his QSL cards my way.

Yep, it's a nice one. First QSL I've gotten since I moved from AZ to TX. All I have is my old AZ QSL cards. Guess I oughta make up some new ones.

Dick,

I can agree with your sentiment, I just
disagree with your method.

But you bring up an important point. Why don't
some of the fellows want to read and learn about
this great hobby? I too, get a little tired of the constant
requests for information that is readily available if the
person concerned would only take the time to do the
necessary research.

Well, anyways, that's my two cents worth.

Back to looking for DX...

> What gives? Is LA always like this? This is hugely worse than here in San
> Jose.

Only an "increased" level of jamming and not a constant level? I guess one or more of the misfits were taking a break from radio when you listened. (Or perhaps they were all over on 145.460-, the alternate "animal farm.")

What's funny to us here in L.A. is that the FCC actually bothers to take all kinds of enforcement action in the rest of the country (e.g. getting uncoordinated repeaters causing interference off the air, etc...) - at least according to reports by TWIAR and Newsline, yet some of these same violations occur DAILY here - and have occurred so for over 10 years on a daily basis, yet there is no apparent enforcement. Only in the past year has the FCC even bothered to make inquiries.

What you encountered was probably LESS than the normal level of such activity. Then again, some of the misfits also happen to be in jail right now.

On Mon, 26 Mar 2001, Jerry Oxendine wrote:

> I, for one, am always puzzled and dismayed at all the mess that apparently goes on on the West Coast. Occasionally, we will have a "bootlegger" get on the local repeaters and jam or harass the legit. ops. The local control ops are, apparently, more militant, observant, or obstinate than those out there. Local repeaters get shut down quickly in such circumstances--unless we are quietly Dfing the perp. Then they are left on for the idiot to get his jollies while we close in. Can you imagine the surprise when the fellow finds himself surrounded by 10 or so displeased hams? Why aren't there concerned hams out there that will go after/locate these goofballs?

One reason: By allowing them this repeater (and its alternate), we keep them contained.

Back in 1993, when we had the fires in Malibu, the W6NUT repeater (back then, under the trustee's call of AA6TK) also failed. Most of the users migrated to the CLARA repeater (145.220-), and some time later, some of them were brought into California Superior Court for harassment. This is the original source of our local term "restraining order repeater." When the 147.435 repeater came back up, most migrated back.

Also, the 147.435 repeater is the only repeater that has bullet holes and dents in it. I believe that one can see pictures of such on its users' web site: www.435.org.

Well DICKhead (may I call you DICKhead?),

Have ya ever thought of doing that through computer too?

I very well doubt you will copy me via the ear at 200wpm. And all those who are uncopiable via computer are going to be uncopiable via the ear .. .even at 5wpm.

Once again, there are better digital modes to use, i.e. psk31 for those low low signals.

I personally was brought up with 73 since it means Best regards, which is
plural. So If I say 73's wouldn't that mean best regards's.
I saw in an earlier post by Cecil saying it is said 73's because it is a
number, well if that the case then Mr. Cecil you owe's me's 73's dollars. Or
was that 100's dollars..

So 73's and 88's to all you good buddies out there, pass them around the
household. From the tallest to the smallest. I am officially 10-7's

That's not entirely true. The entire truth is that I was forced to learn all kinds of things - Morse code being just one among them. I was forced to learn the correct answer to each of several hundred questions. That's also what governments do.

Hans got the worst of the deal in our QSL trade as well. I made up my QSLs using a QSL card program I downloaded from the internet. Kind of a fun program to use, actually. I used an old picture of the Silverado Blue Light mine from the turn of the century (the previous one) as the background. My guess is that Hans spent a pretty penny to make up his cards.

I'll sometimes say 73 plural if I'm addressing a group on a net. That's one 73, multiple times. ;-)

But, Dave you missing the whole point, 5 USC 706 only applies to
government agency rules and actions. It does not apply to the
rules of chess. Now if a government agency mandates that chess
had to play by a certain set of rules, and a particular chess club has
different rules that the government bars, then you have a case.

It was a US Supreme Court decision not an FCC commercial radio rule.

In article <3ac01003$0$88182$bbae4d71@news.net-link.net>, "Larry Klose" <lklose@net-link.net> writes:

>Therefore the rule is not in conformity with
>law,
>but it exist and only exist because of a long standing obsolete treaty
>requirement,
>ITU rule S25.5.

Whether or not the treaty requirement is "obsolete" will be decided in 2003.
>
>How long will the US government keep signing a treaty that impose an
>unnecessary requirement upon its citizens?

"Unnecessary" and "obsolete" are in the eye of the opion-holder, Larry. As it looks now, a growing number of signatories to the treaty will vote let S25.5 quietly disappear in 2003.

>10 years? 50 years? 100 years?

I don't know. I do know, however, that for the past 33+ years, whenever the question of code testing for an HF ham license has come up in the USA, the majority of those who bothered to comment to the FCC have supported continued code testing. That's one of the main reasons the requirement has lasted so long. Note that I'm not saying "the majority of hams" but "the majority of those who bothered to comment".

That majority used to be overwhelming, but in the past 15-20 years it has slowly decreased to about 54-46 in favor of code testing. That trend was not lost on the FCC.

>Why no make the Morse code proficiency exam a requirement for all Federal
>licenses?

Because all Federal licenses do no involve the use of Morse in radio communication. HF/MF ham radio uses Morse extensively. But even that extensive use is not reason enough for the FCC, who have said that the treaty is the only reason they have left to continue the Morse test. They have eliminated all but the 5 wpm test because 5 wpm is generally considered to be the minimum that meets the treaty. When the treaty goes, how long do you think 5 wpm will last?

The reasons the FCC doesn't just ignore the treaty are:

1) It would set a very bad precedent.
2) They don't have the authority
3) They don't think 5 wpm is an unreasonable requirement at the present time
4) There is no mandate to do so.

No the FCC said the 13 & 20 wpm test did not serve a regulatory purpose. To wit:

" 25. Decision.   We have considered the comments on this issue and conclude that the public interest will best be served by reducing the telegraphy examination requirement to the minimum requirement that we have found that meets the Radio Regulations and that has been accepted as proving that the control operator of a station can ensure the proper operation of that station. To achieve this result, we will amend Section 97.501 of our Rules to eliminate the requirement that an individual demonstrate 13 wpm and 20 wpm proficiency in telegraphy before qualifying for any amateur radio operator license. In reaching this decision, we note that one of the fundamental purposes underlying our Part 97 rules is to accommodate the amateur radio operator's proven ability to contribute to the advancement of the radio art.   We believe that an individual's ability to demonstrate increased Morse code proficiency is not necessarily indicative of that individual's ability to contribute to the advancement of the radio art. "

"As a result, we find that such a license qualification rule is not in furtherance of the purpose of the amateur service and we do not believe that it continues to serve a regulatory purpose. "

"Consistent with our decision to eliminate 13 wpm and 20 wpm Morse code proficiency as licensing requirements, we also are streamlining Section 97.503(b) of our Rules to reduce the number of telegraphy examination elements from three to one -- specifically, a 5 wpm telegraphy examination. We also conclude that, due to the Radio Regulations, we can not grant the request of the ARRL that we authorize privilege on all amateur service bands below 30 MHz to Technician Class licensees who have not passed a telegraphy examination. While we do not disagree with the ARRL's belief that the best way to learn telegraphy is to use it on-the-air, and that actual use of telegraphy to communicate is proof of the ability to send and receive telegraphic texts, the Radio Regulations provide that the telegraphy requirement may be waived only for an operator of a station transmitting exclusively on frequencies above 30 MHz. In this regard, we also note, as the ARRL states, that the Radio Regulations remain an obligation of the Commission that can not be waived. "

I don't know, Larry. I've never tried it. I do run the transceiver without the amplifier most of the time, but I hardly ever turn the transceiver down except when talking through the local repeaters (or talking to someone locally, with is relatively rare). Therefore, I don't really know what the bottom end for SSB is with lower watts (how efficient SSB is with lower watts). And I've certainly don't know how efficient it is when compared to CW, so I'm more than willing to accept your word for that.

SSB is a lot more efficient than CW if one doesn't know Morse code. :-)

Yep, I do seem to remember a conversation with you about this some time in the not so distant past. And, yep, code was pretty much gone in the Army when I went to signal school in 1970. In my job (MOS 31M), we used SSB voice for most communications, with printed data transfered with RTTY or encryption. However, some MOS's (Military Occupational Speciality) were still using it because I did occasionally hear it in the halls of the school. But, as I understand from talking to other vets, even those MOS's dropped code not long after that (and the training officer at the Army's Signal Training Command has verified that no MOS requires it today).

BadaBing wrote:
> Cecil, 73 means Best Regards ..

Not usually. It usually represents a cardinal or ordinal number.
If we label people according to their age, there might be a
number of 73's among a large group of elderly people.

> So if I say 73's wouldn't that mean Best's Regards's..

Nope. Best and Regards are not numbers or letters which is where
one uses an apostrophe for pluralizing. What's wrong with
"Lots of Best Regards"?

Nope, you don't pluralize 73 because "dollars" is plural. Picture a group of elderly people with their ages printed on their nametag. "How many 73's do we have?" would be a perfectly acceptable question.

I'm sorry, but you're not getting my thermonuclear device until you pry it from my cold deap fingers (not to mention a few hundred thousand other cold dead fingers).

Anyway, lets not be silly - the two examples just don't fit together. Private ownership of firearms is a tradition that goes all the way back to the very start of this country (every person who signed that Constitution, and the Bill of Rights, owned a gun), but I'm not aware of anybody who is honestly suggesting a right to privately own a thermonuclear device, nor is there any tradition of such ownership. In other words, these two are not even in the same ballbark - in either capabilities or political debate.

Horrors! That worthy surely is long gone from the scene, today they'd
have him up on charges! And he'd be labeled a perfect a$$hole to boot!

The guy has been a nocode tech for ten years now and has no clue how to
renew
his license, and more to the point, no interest in learning. Seems to me
like
another example of letting someone else do it all for you. No wonder he
was codeless and a tech.

Sounds like you'd love that to be the case. Too bad
you have not one bit of evidence or commentary
to sustain that belief.

Cheers,
Bill K2UNK

Yes indeed...and changing still as we go forward. If the ARRL
did a poll now, my money would be on "end all code
testing now."

>>Why not make the Morse code proficiency exam a requirement for all Federal
>>licenses?
>
>Because all Federal licenses do no involve the use of Morse in radio

It ONLY does so for those people that personally want
to use code. There are thousands of hams that do
not use code at all for HF/MF operations.

>But even that extensive
>use is not reason enough for the FCC, who have said that the treaty is the only

A few months. Whatever it takes to go through the
NPRM process.

>The reasons the FCC doesn't just ignore the treaty are:
>1) It would set a very bad precedent.
>2) They don't have the authority
>3) They don't think 5 wpm is an unreasonable requirement at the present time

Where'd you get the idea that no evidence or commentary exists? Do you
read news magazines or subscribe to a paper? Do you watch TV news? How
about general interest magazines?

Dave K8MN

I'm not sure I follow you... What might those "ARRL's singular interests" be and
what
do you propose as an alternative to the *only* national amateur radio
organization?
Cutting off one's own nose to spite the face is usually not a smart choice.

Look, clearly it is in every US ham's interest to retain as much spectrum as
possible
for as long as possible. Fiber optics in every house will alleviate the pressure,
but
it will not eliminate it. Everything else is petty stuff which is not critical for
the survival of amateur radio. Once we absolve this fact, the choice is simple: we
either support our one and only ham radio representation in the world or not - we
keep our hobby alive or not.

Maybe he needs motivation. As for what may motivate him, I leave that to your
imagination. ;-)

As long as he isn't a lifelong loser/jammer such as those who frequent the
W6NUT repeater, who really cares?

>
> Anyway, lets not be silly - the two examples just don't fit together. Private ownership of firearms is a tradition that goes all the way back to the very start of this country (every person who signed that Constitution, and the Bill of Rights, owned a gun)

Well, geez, every person who signed that Constitution was also a slave owner, but you could hardly condone that nowadays, especially with all these nutcases running around demanding their $1 million retribution in gold bars.

> , but I'm not aware of anybody who is honestly suggesting a right to privately own a thermonuclear device, nor is there any tradition of such ownership. In other words, these two are not even in the same ballbark - in either capabilities or political debate.

Why not? I am simply asking for consistency: a thermonuclear device falls into the same category of "firearms" as a six-gun. They are both devices used for one purpose only: to kill people. Everything else is a smokescreen. Now, it would seem to me that the very same amendment you guys are pulling in the case of handguns, rifles and automatic weaponry must cover *all* firearms. One person's definition of danger is another person's definition of safety. What this boils down to is this: that amendment is somewhat anachronistic.
Btw, neither you nor Dick commented on the second part of my example - the narcotics use. But I admit, here we are dealing with one of those things that make people feel good and politicians re-elected. War on drugs. Any day now.

73 ...... Zoran WA7AA

And in case anyone's wondering: I own neither a handgun nor a TND, but I do support a right to bear a handgun or two; I also support legalization of all drugs except to minors, followed by revamping of the legal system with the emphasis on expanding a death penalty. Too radical? Hell yeah, but with 1% of the US population in prison, something better be done before it gets worse.

I wouldn't call the ARRL the "sole" protector of amateur radio in the U.S. Many amateurs, whether as individuals or as groups (clubs, repeater coordinators, or others) comment on pending FCC rulemakings and write Congress-critters (as they are called in another newsgroup). Only if the ARRL were the only entity talking to the government would the title of "sole protector" be appropriate. Nothing says that each individual licensee can't comment directly and must go through the ARRL.....

Nothing says that - you're right. However, how much clout do you think US hams
would have
with FCC and congressmen if they kept showing up in groups of 5 to 10, without
unified
representation, on a strictly individual basis? We could all comment ourselves
right out
of all the spectrum.

Nothing says each individual US citizen can't fight an invading army on his own
and in
groups, but doing that would be the biggest mass suicide since Jim Jones. That's
why we
have the US Army. And that is also why we have the ARRL - to have a strong,
unified and

committed representation so we don't look like a bunch of jokers. Frankly, I don't
understand what's all this dislike of the ARRL - what's the big grudge? Would
someone
care to explain?

That's why I gave him a straight-up answer. Fiddly-farting on fcc.gov to get the 20 pages of the Form 605 plus instructions and getting it set up to print only what you want would motivate anyone to something, most likely suicide but certainly lifetime licenses.

RG:

If you can't find that information out for yourself, then, by all means, do let your Tech ticket expire.

Hint: You obviously have the technology to post a message to a Usenet newsgroup. You can find the information you need using the same technology, only in a somewhat different way. Don't you have a web browser? Can't you do a search?

Another hint: Which government agency is in charge of amateur radio licensing? Think they might have a web site?

Yet another hint: What is the national organization for amateur radio? Think they may also have a web site?

Did these hints help -- or are you really as helpless as you seem?
Remember -- amateur radio is not a hobby which is intended to
attract technically inept people...

In article <99mdnr$hep$0@208.206.142.84>, Dick Carroll <dixie@townsqr.com> writes:

>
> Cecil prefers to ignore the certain fact that knowledge and skill in the most simple, easily implmented, widespread and truly basic radiocommunications mode could and easily *should* be mandatory for ham radio operators, as a basic reqirement. Failure to assure this by the FCC constitutes the beginnings of abandonment of oversight in a probable prelude to similar eventual abandonment of the Service as no longer of value in the "public interest, convenience and necessity". The enforcement headachescaused by further anarchy caused by the influx of licensees who, having invested no meaningful personal time, resources nor effort, have no vested interest in adhering to the rules will only hasten that conclusion.

Dick:

Thank you, thank you very much! I've only been saying this to Cecil (and everyone else) for the better part of ten years. All the while, the only rebuttal has been the usual strawman argument that code testing was somehow going to prevent AMATEUR radio operators from developing the latest high-speed, mega-throughput digital modes, as if hams hunkered down in their workshops did that sort of thing... you know -- homebrewing their own multi-million transistor chips, etc. The connection between code testing and technical development has always been the crux of the No Code Testing Agenda - NCTA. Too Bill Sohl has just put an end to that argument by admitting that the

NCTA's were wrong!

writes:

>Talking is basic to Homo Sapiens, Morse code is not. I can build an
>AM transceiver faster than someone can learn Morse code and build
>a CW transceiver.

Cecil:

How much you wanna bet I can come up with a simpler, easier,
cheaper, and faster to produce CW transceiver design than your
AM transceiver? And don't look now -- but I "learned" the Morse
code at greater than 5 WPM capability in about two days. Can
you teach someone how to speak fluent English in that amount
of time?

>The spread of CW is getting more narrow all the
>time. 2/3 of US hams use it rarely or never.

Knock, knock -- Earth to Cecil -- Why do you think this is so?
Could it be because we've reduced the code testing requirement to
the point of insignificance, that nobody is bothering to learn it
anymore?

>CW is a fun mode for some but it is just another mode and should be
>optional like any other mode.

I have absolutely no objection to the USE of Morse code by individual amateurs being an "option." However, this "option" won't exist unless there is a basic REQUIREMENT that ALL hams learn this mode and demonstrate useful proficiency at it prior to being granted HF privileges. It has already been proven that people from the age of 5 to the 90's, from all walks of life, and even people with severe, disabling handicaps (including total deafness) can learn and effectively employ the Morse code not only in amateur radio, but their daily lives. The problem here is the uncanny ability of liberals like yourself to sell short the abilities of their fellow human beings. This is a very common sign of emotional and intellectual immaturity -- the Self As Center Of The Universe syndrome. You project your own weakness and insecurity on others, even though others don't have your problems. Get help.

>What is wrong with live and let live?

Nothing. If you truly beleve in it, why don't you want the Morse/CW mode to "live" in the ARS -- knowing that deleting the code testing requirement will surely kill it?

Come on now, even Clinton couldn't make that one fly.... A gun can only kill a single person within the shooters' direct line of sight per discharge. This weapon targets a specific person, and has the option to only wound, as well as kill. It does not destroy the surrounding buildings, all life forms in the surrounding area, and pollute the land with radiation for the next several centuries.

If what you say were true, then the ATF would be enforcing the laws regarding Nukes... :>)

it's just my example of how an operator could use cw without having the foggiest idea of what the code is ...

> > I very well doubt you will copy me via the ear at 200wpm.
> You're typing 200wpm? yeah, right! Wow, Whatta guy...

Did I say I type 200wpm ...nope ... I didn't ... 99.9999% of the readily available programs out there will allow you to buffer your tx data and then send in one big clump

> And all those who
> > are uncopiable via computer are going to be uncopiable via the ear ..
.even
> > at 5wpm.
> So much for your "expertise" on the subject of Morse code.

With this cheesy software I have (cwget), It pulls out frequency data through an fft. All you do is tell the software which freq to use (by clicking on the spectrogram) and it will then output at the bottom, a amplitude vs time graph. You set the noise level and it will then decode the morse.

All that could be done automatically. You will notice that in real life when you are listening to the radio, lower signals will be difficult to copy because of the noise (high frequency stuff) will mask that 900Hz signal you are tryin to listen to.

> > Once again, there are better digital modes to use, i.e. psk31 for those
low
> > low signals.

> Sure there are. All you need is a minimum few hundred thousand active
> devices and the software to go with....

digipan software, a computer keyer (can be built for around $5) and an audio cable to have the outputted audio from the radio sent to the computer ...

What is it with everyone?

I have been a class b (no code Amateur) here in the uk for 15 years, the great thing about amateur radio is the wide range of activities we can participate in from hf cw to microwave, my own interest has been vhf/ slow scan, packet, and fast scan and also having good old chats with fellow hams, we are all supposed to be in the same hobby and we serve the hobby no good by arguing who is better than who.
since i passed my nocode class b i have continued learning about the hobby and also the technical aspects of it at my own speed and enjoyment and everyone else should be alloyed to do the same.

Now if the powers that be feel that morse code testing does not serve
the interest of the hobby then fine, it does not lesson the technical
qualifications of amateurs.

And on a final point, over here i have noticed that in the 15 years
i have been licensed the bands have got less and less used, 70 cm very
unused, 2m very quiet these days, even repeaters 6m quiet unless
there is a lift on. If we don't start to all get on and enjoy the hobby
we still have we may not have a hobby left in 10 years time, then we
can all argue the nocode issue until we are blue in the face.

Regards
Mark

Red Lion decision was a warning to the FCC that technological change requires a review and change in the rules. Congress now requires that the FCC review its rules every two years. 47 USC 161.

47 CFR 97.503(a) in non-conforming with 5 USC 706 because the code test is unnecessary and not in the public interest, not because of the Red Lion decision.

Hopefully, such a poll would be better designed than the 1996 one. But I'm NOT
talking about polls, surveys or newsgroup posts. I'm only talking about
comments and other communication to the FCC. That's what really matters.

The same can be said for any mode or regulation. How many hams use EME? SSTV?
Satellites? Far fewer than use Morse - but those subjects all have a place in
the written testing. Not as a single element, of course. The fact remains,
though, that in order to get the license, I and many others had to learn all
sorts of stuff that we never use on the air.

Radio is not basic to Homo Sapiens. Morse code is basic to radio
communications.
Morse code is quickly and easily implemented by persons not too lazy and
useless to have learned it. Ir naturally follows that Morse code
qualifications should be a integral part of any amateur radio licensing
scheme since radiotelegraph operations are widespread within amateur
radio, and potentially useful on moments notice.

X-FLARE: A powerful X-class solar flare erupted near sunspot group 9393 on March 29th at 1015 UT. The blast sent a coronal mass ejection (pictured right side in a SOHO coronagraph animation on SOHO web) toward Earth -- the second in as many days. The first of the two incoming CMEs will likely hit Earth's magnetosphere on Friday; today's expanding cloud will arrive approximately a day later, on Saturday.

Forecasters say there is a good chance (15-25%) of severe geomagnetic storming when the CMEs strike.

Larry R, K3LT

Here the WT Docket #98-143 Comment of Cary Mangum, who has some standing regard to the subject of emergency communications. Apparently, the California emergency system has not enlighten by radio communications wisdom.

Larry K,   KC8EPO

~~~~~~

In The Matter Of 1998 Biennial Regulatory Review � Amendment of Part 97 Of the Commission�s Amateur Service Rules, FCC WT Docket 98-143

FCC Secretary Magalie Roman Salas
Office of the Secretary, Federal Communications Commission
1919 M Street N.W. Room 222
Washington, D.C. 20554

Public Service is the basis on which the amateur Service license has been authorized since its inception. This is the aspect on which the commission is urged to focus, and which we here address, as follows: (1) license privileges and classes, (2) testing requirement (code), (3) RACES Station licensing, (4) Amateur operation.

Background And Basis

Since 1985 California has had an aggressive program utilizing Amateur licenses. That year the state legislature mandated a paid staff coordinator with directions to enhance and expand that public service function involving amateur licensees. In April 1985 we began a series of education bulletins
~~~~~~

statewide at a time when there but three RACES units in the state. Today almost all of the 58 counties have an emergency communications unit based on the Amateur licensees; and our weekly EMCOMM Bulletins have would-wide distribution in addition to every state in the country.

In so far as we know, our program � the leader in the nation � is the only one with a paid staff position created by the state legislature to support the use of Amateur licensees in service to their communities.

In 1987 the American Radio Relay League requested that the statewide Bulletins be placed in the Amateur packet radio networks around the U.S. In time they became the standard in the US, replacing s defunct FEMA education program. Today these Bulletins are the source of education information for emergency communications units based on Amateur Radio. They are literally on hundreds of bulletin boards and Internet sites around the world.

Because we are involved daily with quintessential public service � their use in and for local government, we have a broader experience of Amateur license activities that than most petitioners. Our program is the recognized model in the U.S., Canada, Australia, New Zealand, England and other countries worldwide. The weekly EMCOMM Bulletins are on the worldwide Web at www.acs.oes.ca/ . Our Manual, titled the �establishing and maintaining an Emergency Communications unit for government�, is the only one of its kind in the country.

(2) Testing Requirement   (4) Amateur Operations

In the 1990�s very significant changes have occurred affecting the usefulness of Amateur radio licensee to government. Today we face information systems that did not exist in the past. As we look to the year 2000 we need Amateur licensees capable of providing a variety of services in communications, typically computer based.

Thus, the use of code has declined to where it is no longer viable for government.

a. California eliminated the use of CW some years ago. Although we have a large and extensive communications center staffed for and with Amateur licensees, we had not used CW in decades. We retained a CW net until 1995, but it served no essential purpose, just once-a-week training for 3-5 participates. No county governments participated for years.

b. The US Coast Guard also eliminated the use of morse code several years ago, which is further evidence of its lack of applicability to today�s communications needs.

Today, our information systems are based computer based and operate by both wire and wireless. If the Amateur of today is not familiar with computers he/she is of little use. A background in computer experience and knowledge is far and away more important than that of CW.

When I became licensed in 1941 Amateur radio was the means of alternative communication. Today, the computer provides that, hence thousands of those who would otherwise be FCC Amateur service licensees never apply because the service does not attract them. Until we recognize that factor the service will not grow significantly, nor do we get the new blood of technically oriented people to spark the new innovations so badly needed.

To make matters worse, to a large degree an �old-boy network� exists in Amateur radio; one that grew up with �you must pass the code� concept. Like people everywhere �what�s good enough for me is good enough for you� is the mindset of many of today�s Amateurs. Without the ability to look to the future, or grasp the many changes occurring around them, they would keep practices long since useless. In government today we pass data digitally, not by CW or voice radio. In fact, there are government agencies who seek to do away with radio entirely.

One of my constant battles is to keep some radio capability functioning in government. There is a new breed of administrators who focus on the bottom dollar, not redundancy. Often they have no experience in communications failures, and their digital computer networks have not failed. They see no need for radio. So, they no longer fund or support radio programs. The federal Highway Authority (FHWA) is one instance of an agency that no longer supports High frequency radio. It�s a very real every-day battle. Our fiscal year has just begun and yesterday I was informed that there are no funds for communications equipment as it all went for computer systems.

So, I urge the reduction of code requirement to 5 wpm at general license level as it is not essential skill qualifier in today�s world. When it is possible to do so under international radio regulations, I further urge the Commission to drop the CW requirement entirely. It is not relevant to the year 2001 and subsequent real-world needs in communications.

(1) License Privileges and Classes

The proposed classes (no-code Tech, General, Advance, Extra) are appropriate. There is a shortage of people above the tech license interested in emergency Communications. It has been the Tech licensee�s that have made our programs possible. Without them the programs would flounder. There are exceptions, but in general it is the Technician licensees we rely on today. Due to the shortage to those qualified to operate HF we have to put a higher qualified licensee with them just to staff HF circuits.

I urge the Commission to adopt a requirement of computer ability, at least at the general level. Knowledge of technical digital information is not important. There may be those who will assert that test should include questions on Amtor, Pactor, Clover or such. The problem there, however, is that such modes are already out-of-date. To lock the testing into them is already a decade behind the times. What we need is young minds open to new possibilities, not old minds locked in decades old minsets. There are enough computer specialist around that its� easy to find them and they don�t need Amateur licensees to fix technical problems. In fact, it is their interest in the technical aspect of computers that have draws them away from

Amateur radio.

I recommend that the licensee demonstrate the ability to use a computer; that is, demonstrate operating ability in word processing program, in a text-editor, how to use eMail and how to use communications programs. These are skills that need demonstrating in person, in lieu of the code test. It will be difficult to have multiple choice or yes/no questions to uncover these skills. Have the applicant demonstrate ability on his/her computer or one by owned by the examiner. It�s not too difficult to set such a standards as it is required of countless job applicants these days. An alternative is some of certification by a computer user group as to demonstrated skills.

(3) RACES Station Licensing

I urge that the provision for RACES station license be dropped. Few exist. Those that do should not be renewed. With today�s easy availability of callsigns, the purpose of calls for government EOC�s is simple. Here we formed a club to support the state activities and got licenses for each of the state�s regional EOC�s. It�s not quite the same, but it works.

The disadvantage of the RACES station license is a provision in the current regulation that has been misapplied. (see.......) This provision should be dropped. Specifically, that section states that a Races Station (defined in ....) cannot talk to another RACES station. Legally that means two RACES stations LICENSEE. However it has been interpreted to mean that any Amateur licensee operating in the RACES (mode or activity) cannot talk to any Amateur licensee operating in a non-RACES activity. For instance, during the 1970�s a FEMA employee critized one of our California amateurs for allowing a Amateur operating in a RACES activity to call and talk to an amateur for a club (non RACES) who had telephone capable of solving a need. The FEMA person did not understand that it only to a RACES station licensee.

Cary Mangum, Advanced Class Licensee W6WWW
State RACES Officer, California
State ACS Officer, California

"73" comes from the old landline telegraph days. It was one of a number of "stock" messages, used to save time and effort in sending a message.

Now, knowing that, would anyone REALLY expect them to add to the length of the comment?

How about if the flash cards are dahs and dits rather than dots and
dashes? Same problem? I'm looking for some method to help because I would
like to take the code test prior to July. Recommendations are
appreciated including websites.

Again, the only point that we can concede to is that your book
says it CAN be done. In point of fact, in true professional work,
it's NOT done, simply because it doesn't meet accepted style. And
on that same point, going back to our original discussion,
various users guides may also say, for example, that "A is
comprised of B and C" is in use. The better guides will also say,
however, that that form isn't acceptable in the formal sense.
It's reading the fine print in users' guides that count, Jon.

Further, this gets totally away from the argument we started
with. Whether to use an apostrophe to indicate 73's (vs. 73s)
isn't the question! The question was whether "73" should indicate
both the single and plural form. Several articles over the years
in QST concluded that it would. For to say "73's," they
concluded, would indicate "best regardses."

Of Course. Presidents Herbert Hoover and Jimmy Carter were just stoned
anal textbook-memorizing no-intuition engineers as are the CEOs of
most of the major auto manufacturers today. Get back to me when the
first undergrad pisics major gets anywhere close. Have a nice nite
with your quark.

Yes, 73's and 73s both say that in the literal sense.

I usually say seven three instead of seventy three. That's too long in
CW. :-)

Books, Vince. Plural.

> says it CAN be done. In point of fact, in true professional work,
> it's NOT done, simply because it doesn't meet accepted style.

And yet, I provided several examples from leading newspapers where that
form is used repeatedly. Could you name some publications that conform
to "true professional work" in your view?

> And
> on that same point, going back to our original discussion,
> various users guides may also say, for example, that "A is
> comprised of B and C" is in use.

Red herring. We're discussing the use of the apostrophe to form plurals of letters, numbers and symbols, not the use of the word "comprise." All the comprised's you care to cite are beside the point.

> The better guides will also say,
> however, that that form isn't acceptable in the formal sense.

Please name the "better guides" to which you refer.

> It's reading the fine print in users' guides that count, Jon.

Please cite the fine print, Vince.

Jon

If you are saying that the flashcards will have either the words 'dah dit' or 'dit dash' or if it is in the form of   ' _ .' etc.. then the problem is still there.

Forget the flash cards. Use the ear method, unless you are handicapped, which you have not mentioned.

Of course if you are only interested in doing 5 wpm (why bother) then the flashcards will work. Probably....but you wont get much faster.

OK, but in the professional world it would be written "73s." The developmental style has to do with words not looking awkward or confusing the reader as to possessive form versus plural. That's why one writes "the CPUs work at 800 MHz," not "the CPU's work at 800 MHz." Or, "the LEDs operate at 5 mA," not "the LED's operate...." If one ever sees the latter form, it's an oversight on the part of the writer, or the writer needs an overhaul.

As if you see an undergrad engineer get anywhere close either ... they are all masters or doctors ... undergrads count screws for 'em.

CEO's are businessman ... not developpers

From what i have seen of your history ... none of your presidents have been much more than something for every nut bag in the country to rally behind when they call for war.

>And yet, I provided several examples from leading newspapers
>where that form is used repeatedly.

Then it's a writer/copydesk oversight, or the writer/copydesk
needs an overhaul. As I mentioned, one writes "the CPUs work at
800 MHz," NOT the "CPU's work at 800 MHz." There's good reason
for that style: one is, you don't want to confuse the possessive
case with the plural form. That's how good professionals deal
with the issue.

Ahem, Richard, like when *I* have the General? HaHa! Already passed
that years ago! Uh, when it was 13 WPM, and there was no "debate" about
the requirements for accessing HF. LOL!

In the same timframe the NYC repeater wars were in full bloom. Those
suckers put 4-5 qrp jammers per target input freq on the air up on the
utility poles around the rptr sites. Batteries were not an issue, they

tapped the pole pig output lines. Some of 'em included white noise generators. The DFing exercises to end 'em all.

Presuming that you have no handicaps, like all have said, forget about any "aids" that depend on reading. Think about it: CW is mostly about hearing sounds that you quickly (and, later, automatically) interpret as letters or words. Use AUDIO aids instead of anything that you read or memorize. The fellows are telling you exactly right: the use of "reading" aids will only add to the learning process and hinder your learning of CW. There are a variety of tapes available to progressively move you along to 5, 10, or faster speeds. Also, DO NOT touch a sending key at all. The objective is to learn the sounds thru practice. One day, you will reach the point where you automatically hear the letters/words without having to "think" about it. It becomes like a second language.

So the writers/copydesks at the New York Times, Washington Post and
Chicago Tribune all need overhauls? You should let them know.

> As I mentioned, one writes "the CPUs work at
> 800 MHz," NOT the "CPU's work at 800 MHz." There's good reason

You're ducking the question. Again. You've asserted that it's incorrect
to use the apostrophe to form plurals of letters or numbers. While
that's your opinion, it's demonstrably not the opinion of the leading
professionals, nor of any reference work cited. Your opinion is
unsupported by any documentary evidence. When asked to cite references,
you are unable to provide any.

Good professionals apply style in context rather than relying on
hard-and-fast rules that do not, in fact, exist.

Yet even in the NPRM comment phase, the FCC didn't
ask for such an absolute stand to be put forth. For most
commentors the issue before them was 5 wpm test vs
5, 13 and 20. There was nothing in the NPRM that suggested
the FCC would even entertain ending all testing. NCI
did make that position and we encouraged supporters to
clearly state that. That was at least two months after many
people already filed comments supporting ARRL's
position.

>>>>Why not make the Morse code proficiency exam a requirement for all Federal

>The same can be said for any mode or regulation. How many hams use EME? SSTV?
>Satellites? Far fewer than use Morse - but those subjects all have a place in
>the written testing. Not as a single element, of course.

EXACTLY!!
End the separate test element and add some theory questions
about code and then the morse (as a knowledge aspect)
is truly on a par with the other modes.

>The fact remains,
>though, that in order to get the license, I and many others had to learn all
>sorts of stuff that we never use on the air.

But nothing as a single subject area gets the attention

and focus that code has. Less today because of the
end of 13 and 20 wpm, but still an unjustifiable weigting
in the overall perspective.

Cheers,
Bill K2UNK

Darn, we lost two states. I wonder which ones. I wouldn't mind losing California and Florida. Of course, New York wouldn't be a bad choice either. Any other candidates? Ha, ha! :-)

What is I told you to recite your ABC's? Obviously, I haven't told you how many times to recite the alphabet, just to recite it at least once. Therefore, "'s" doesn't always suggest plural.

>>with the issue.

>You're ducking the question. Again. You've asserted that it's
>incorrect
>to use the apostrophe to form plurals of letters or numbers.

I indicated it's not good form. It's tolerated, that's about all.

>While that's your opinion, it's demonstrably not the opinion of
>the leading professionals, nor of any reference work cited. Your
>opinion is unsupported by any documentary evidence. When asked
>to cite references, you are unable to provide any.

The one I just provided above re: CPUs is typical of any that can
be found in any good engineering journal. I don't see you, or
your professionals, arguing with it.

>Good professionals apply style in context rather than relying on
>hard-and-fast rules that do not, in fact, exist.

Then we agree in the sense that applying style in context means
that you write "the CPUs work at 800 MHz," NOT "the CPU's work at
800 MHz." For you haven't disagreed with that.

Okay, in that case you can use thermonuclear device. However, you'll have to limit it's yield, say perhaps to a small tactical device capable of taking out a smaller town instead of the whole city. :-)

> Although, some would say this becomes
> borderline genocide. Like shooting fish
> in the barrell. Like working DX in nets.

Well, that might be true. Of course, it depends on what you're shooting at. My brother-in-law uses an assualt rifle to keep the bears and coyote (wolves, or whatever they are) away from his farm animals in Wyoming. Of course, it is also effective for smaller animals also - he can't hit them, but the sound, and dirt flying up from nearby hits, is enough to scare the holy heck out of them.

> Holy crap, which part of the country do
> you live in? East LA?

Not at the moment (my mother-in-law lives there, though). No, its fairly peaceful where I'm at now, so I mainly use my guns for target practice at the moment. However, when I move (yes, I've been saying that for a year), I intend to move a little further in the woods, and would appreciate having a good weapon around (just for my own peace of mind).

Sorry, I didn't mean to insult you by suggesting you were an anti-gun advocate. That was just the impression I had from reading your message. Besides, that last part was really meant to provoke others into commenting, not necessarily just to get a response from you.

Sorry, again, Zoran. But, your message did seem to challenge the ownership of private firearms, even if that wasn't your intent.

Bullet? The heck with that. Just remember that you were the one who brought up the use of a nuclear weapon. :-)

Please prove that is not just poor English by a dumb engineer, Vince.

Absolutely well written, W6DKN. The problem is not guns, or the cars used for joy riding, or the street corners used to sell drugs, or anything else beyond the people involved. Until attitudes change, and we end this seemingly endless tolerance to everything subversive to civilized society, the problems are simply not going to stop.

Morse code is a living zombie in regulatory matters concerning
amateur radio licensing. Feel free to walk with the living dead.

If you want to pretend to be, or have papers, signifying you
are a Master of English, meet the test of SELLING your
word works to an editor, sight unseen except for the works
themselves. If you want to pretend that apostrophes are
"correct" in plural forms (when it is not common practice
among those who edit printed words), you can rationalize
that you are "evolving" English. That won't be true but...

...good luck on this one now.

It would seem that Extra class licensees are automatically
the highest-grade at English language authority?  I don't
think so.

From these sources - "Webster's New World Compact School
and Office Dictionary," Prentice-Hall, 1989;  "The Chicago
Manual of Style," University of Chicago Press, 1985;  "Style
Manual" from the U.S. Government Printing Office, 1980, et
al, the apostrophy indicates (primarily) a POSSESSIVE but
(secondarily) can indicate missing letters in a contraction
[e.g., "can't" for 'cannot'] but only rarely can it be used for
showing certain coined plurals such as "Did you mind your
p's and q's?"

By common convention among editors (those who do the
final test of acceptance of purchased word works), the
plural of the telegraphic equivalent of 'Best Regards' is just
73s, no apostrophe.

This is about the only time I will agree with Vince
Biancomano and that only on style of American English.

Now why all this endless prattle on non-amateur-radio-
policy subjects when it is obvious that it has nothing to
do with radio, amateur radio, or government matters
regarding any licensing?

Take all this down the hall to the door marked "All who
consider themselves Masters of English and are right."
It's far, far down the hall.  Good day.

Vince, I have to agree with you on that...but the example isn't
quite good for this group.  "Real Hams" only work CW on HF
and HF is below 30 MHz.  "Real Hams" despise modern
things like computers.  "Real Hams" will hardly ever go above
the 70 cm band (and then only with a borrowed HT), certainly
not up to 800 MHz.   :-)

SSB is *zero* efficiency when conditions are too poor to copy, but CW
will still get through.

 But of course a MESSAGE, perhaps needed to be sent on CW in very poor
conditions which OFTEN accompany disasters, could bring food and water
to the needy survivors. Of course no such scenario could ever penetrate
your granite skull.

 The word is REALISTIC.

Not too surprising, since you're not a very accomplished CW operator,
one who can copy down into the noise. You may have a better than average
program but that isn't saying much. My personal experience with seversal
versions of DSP has been a disappointment. I expected it to work well,
and it plainly does not.

 Well Zoran, apologies are in order if you really are a valid supporter,
but you surely understand that the anti gunners, like hte anti coders,
talk out of both sides of their mouths.

Univarsal was the fact that the perps telegraphed their intentions and
no one turned them in. The kids gotta take it to the school officials
when they talk that way.

This subject has been pretty well chewed over here before and you just
landed on the wrong side of it, from what was *most* evident in your
post.

The trade would be by/with the FCC, not other users. The Amateur Radio
Spectrum Protection bill that has been kicking around in congress for a
few years says something to that effect, not that it will ever actually
become law.

The both of you missed the point entirely. Dick McCullom was aiming at
Leland who is still whining about the 5wpm code test, which will not go
away for a few years yet, and nothing anyone can do will change that.
Leland whines on anyway, citing reams of homemade "case law".

No one's taking your guns away, Dick. If we lived in a perfect world where everybody's happy and friendly and lovey-dovey, there would be no need for firearms, but sadly this will never be. Until then, it will take a majority of Americans to amend the Second Amendment, and it's not happening in our lifetime.

Anyway, 73 to you and Dwight and everyone else taking part in this gun-free exchange. I'm QRT.

> become law.

The FCC does not own any spectrum, but they are more or less a combination of the
Wall Street and
Judge Judy when it comes to spectrum assignment. The Wall Street part of them
would like to
auction off every Hz to the highest bidder, and the Judge Judy in them would like
to make
everybody happy while collecting a large salary. Since this is irreconcilable, we
have a problem,
and that problem is an increased pressure on our bands. Now, the real owner of the
bands is
actually everyone and no one, which means that regular Joe Sixpacks eventually may
get to
determine the fate of amateur radio (indirectly, of course - whoever heard of Joe
Sixpacks
running the country; that's what we have politicians for). As a matter of fact,
"our" bands are
not at all ours, since we have already stated that everyone owns the spectrum, and
the ham-radio
population happens to be a very small percentage of the US (and world) population,
which means
that Joe Sixpacks don't give a rat's behind about us and our perceived needs.
Therefore, if there
is no strong, organized and unified effort of the entire ham-radio population, the
spectrum will
start to disappear no matter how many no-code licenses are given out and no matter
how many VHF
radios are sold. By far the best vehicle for such an effort is always a national
ham-radio
organization, which in the US happens to be the ARRL. That is why it is my belief
that every US
radio-amateur should support the ARRL in one way or another, even if he/she

differs
philosophically with it in some or most other issues.
I haven't even begun to address the problem of the international scope: the HF spectrum demands
of the developing countries. The WARC and ITU will not so much as glance at petitions coming from
any sources other than recognized national ham-radio organizations. The FCC can only go so far
within the limits of the international agreements, so the real battleground is actually outside
of the US soil.

And now I rest my case.

73 .... Zoran

It is one of those language things; who the hell is 'you'? It was not
intended personally in any case.

Not quite a brainfart but I sure as hell could have said it better. Saw
it coming, as usual, about two miliseconds after hitting 'send'.

> to kill people.

Oh, come on. Surely even you can see the difference. A gun can be used by an individual for self-defense, recreational shooting, hunting, and so forth, in addition to it's use as a weapon in warfare situations. A thermonuclear device, on the other hand, is strictly a weapon of war - it cannot be used by an individual for self-defense, hunting, or anything else not related to warfare. In other words, these are not at all in the same catagory (hince are not treated the same when it comes to the law).

> Now, it would seem to me that the very same
> amendment you guys are pulling in the case of
> handguns, rifles and automatic weaponry must
> cover *all* firearms.

Again, handguns, rifles, and automatic rifles or handguns, can all be used for self-defense, hunting, and recreational shooting. And, yes, contrary to the opinions of most anti-gun advocates, an automatic can be used for hunting. In fact, the primary appeal of the automatic is that it can fire a single round in hunting situations, but can also be used an automatic when needed for self-defense. And both modes offer value for the recreational shooter (target practice, competitions, etc). Therefore, it is perfectly reasonable to say that all of these should be covered by that amendment.

Now, perhaps you can answer a question I have about anti-gun advocates. The clear goal of these people is the total elimination of private gun ownership in this country. At the same time, most of very these same people also tend to be anti-police - they often advocate a reduction in the number of police and advocate restrictions on police authority and activities. It these two agendas are accomplished, exactly who is going to defend my family? Are you, an anti-gun advocate (and most likely an anti-police advocate), going to do it?

Except when he doesn't have enough power, antenna performance,
or operating conditions to effectively employ SSB -- and CW would
still get a message through! Of course, that's a "Morse myth" or
something like that, isn't it?

It always amazes me that the people who whine loudest about being
prepared for emergency communications are least willing to support
the learning and mastery of one of the most practical, effective,
efficient, and universal modes of emergency communication. That
is one strawman who is very well stuffed; unfortunately, the straw is
extremely dry, and the strawman is constantly being chased by
someone with a very large box of matches!

Cecil:

I am not prejudiced against SSB for emergencies either, Cecil -- but if I need to employ 5w CW, I can do so because the code testing requirements in "force" during the time I was upgrading provided me with functional proficiency in that mode. This is now something we have lost in the ARS. If we can no longer effectively employ one of our most durable modes in the ARS, how does that equate with "live and let live" if someone's life could be at stake?

Hansl:

Translaton: Almost a year into Restructuring, it has shown to be a dismal failure! After all, the intention was to greatly increase the TOTAL number of licensed amateurs, for the sake of increasing on-air activity and justifying our retention of vital spectrum. Predictably, all we've seen is a lot of upgrading of existing hams taking advantage of "grandfathering" if they ever passed a code test sometime during the last century. Obviously, giving away HF privileges for next to nothing doesn't seem to be working well enough to save us. Can you say "reallocation?"

Cecil:

How does my stated willingness to permit the reallocation of little-used secondary amateur allocations above 500 MHz constitute a "death wish" for the ARS? I believe we're not in any danger of losing much, if any HF spectrum -- in fact, it is likely we'll actually *gain* allocations below 30 MHz in the future. The ARS, in one form or another, will probably go on way beyond the point where it has any true significance in the context of 21st Century technological advancement. My only "wish" is that we hams stop being the perennial spectrum hogs we've always been, and permit the spectrum we can't or won't use to be utilized in a more productive, socially responsible, and profitable manner by commercial interests. My point of view is not merely intended to reflect my being a good ham, but also a good, responsible citizen. For a relatively small handful of hobbyists to tie up RF spectrum that is potentially worth billions of dollars is hardly a responsible attitude.

What if he has no power, no antenna, and no transceiver? Will CW still get a message through? Get real, Larry. It is personal choice whether to use FM, SSB, CW, cellphone, smoke signals, or drums. The slight chance that CW may someday be useful for an emergency is not enough of a reason to require all HF hams to pass a Morse code exam. I have known Morse code for 53 years and have never used it for an emergency. Besides personal fun, my Morse code effort and CW skill have been wasted.

Wow, ask a simple question, get a quick response, and have insults hurled at me for asking. Larry, and Dick, you two guys are idiots. Take your heads out of your ass, you'll like the view better. My innocent question was answered by a couple of nice guys in a courteous manner but you guys are off the wall. You know absolutely nothing about me but condemn me and make broad accusations.

No need to respond to this post I won't see it. You've both gone in my kill file and this is not a newsgroup I wish to continue reading. To the others on the list without the attitude. 73. RG

Your sky-is-falling "could be" scenarios are legend, Larry. Far less than 1% of the population know Morse code. What about all those people? If Morse code is such a good idea, why not make it part of every driver's exam.

If citizens don't have food and water stored, they may perish during an emergency. Do you want to make storing food and water mandatory?

Every citizen decides how to prepare for emergencies or not to prepare at all. That is live and let live and is as it should be in a free country. Hams are no different. Some hams choose not to even own a transceiver. How is Morse code skill going to save them?

What would you do with those call signs, Larry? That was years ago
and I only remember about seven of their call signs off the top of
my head. A couple of my students zoomed right past me all the way
to Extra.

You just haven't tried the right computer program, Dick. My SCS PTC2e
with a DSP processor copies CW signals that I can hardly hear.

Sorry Phil, From Webster's: "apostrophe - a mark ' used to indicate the
omission of letters or figures, the possessive case, OR THE PLURAL OF
LETTERS OR FIGURES" ("Figures" of the numeric kind)

My Encyclopedia says, "The plural of numerals is formed by adding an
apostrophe and s: 7's, 9's, the 1900's ..."

In English, the apostrophe is used for pluralizing numbers.

Hey Rob;

You seem like a reasonable fellow, why don't you take my advice and "unsubscribe" from this newsgroup, and get on with life. These folks have been arguing about the same old Morse Code crap since the PBBS days in the early 90's.

After having fun flaming these a-holes for a few months around 3/15/2000 when I got my Extra(and will never again screw with CW or HF), I've gotten on with my life.

Of course you are right, but save your breath, these guys are hopeless. They just will never get it. BTW, I liked your assessment of Linux on your site. Oh, and don't bother replying here - I won't ever see it. Good luck.

Stewart - N0MHS

Do you guys read the damn thing to the end before you hit the Reply button, or
what?
Both you and Dwight called me an "anti-gun" advocate even though I clearly stated
in
my previous message that "I do support a right to bear a handgun or two".

> I have absolutely no intention of killing anyone with
> a gun, but I also have no intention of allowing you to confiscate them.

Fine, I have absolutely no intention of killing anyone with a TND, but I also have
no
intention of allowing you to confiscate it. Let's assume I have one, for the sake
of
the argument.

> I DO have an intent to use them - the mere existance and presence - to
> deflect those who would cause bodily harm to me and my family. Almost
> always, the mere sight a weapomn of defense is more than enough to put
> the coward to flight. Should the assailant be in an unusual state of

The problem arises when a monkey wrench is thrown into the "natural progression of
things", like all those high schools shootings in the last few years.

> Soit was when columnist Mr. Carl Rowan, a rabid anti-gunner, shot an
> intruder. He sure changed his tune in a hurry. Curious thing, that he
> even OWNED a gun, what with all his anti-gun rhetoric, isn't it? Do YOU
> own gun, by the way?

:-)))))))) Please refer back to my previous message where it clearly says: "I own
neither a handgun nor a TND".

> I'm not real eager to take seriously the opinion of anyone who can't
> differentiate between a personal firearm and a nuclear weapon. Looks
> like a screw may be loose somewhere.

It is mind boggling how quickly a reasonably normal discussion turns into name
calling. This means either that you and your militia are already polishing a
silver

bullet with my name on it, or you are out of arguments.

We are dealing with legislation in both cases, and legislation is never written in stone. Just as slavery was legal one day and illegal the next one, the same thing can happen to the "right to bear arms". Surely there is such a thing as a constitutional procedure to repeal amendments.

Well, as long as we're swapping life stories, I'll admit that I've always been sorry that I did not have a shotgun when a burglar broke into my apartment some years ago (while I was in it). Not because he broke in and tried to rob me in order to feed his habit, but because the son of a bitch came back that night and set the balcony on fire and we almost got burned alive.

Oh, OK, you got me. I'm just trying to piss you guys off. But, wait, what if you
are attacked by a fairly large mob armed to the teeth and there's no way in hell
you stand a chance with a six-gun. Can you at least use a flame-thrower on the
punks? What about Mustard Gas?

Although, some would say this becomes borderline genocide. Like shooting fish in
the barrell. Like working DX in nets.

> In fact, the primary appeal of the automatic is that it can fire a

Holy crap, which part of the country do you live in? East LA?

I wouldn't know. I am only a devil's advocate.

Dwight, please read the last part of my previous post and then see how much of an anti-gun, anti-police and anti-whatever advocate I am.

Maybe so, but I still consider these issues non-crucial in the rapidly changing rules of
the technology game today.

How the hell you gonna trade it if and when you lose it? Your statement is paradoxical: on
one hand you're saying that it is not in our interest to retain as much spectrum as
possible, and on the other that we need to trade it. Even so, I got your point and I happen
to agree with it - I would gladly give up MHz's of UHF/SHF allocations for expanded HF
bands, but the only problem is that people who are willing to pay gold for UHF have nothing
to offer in return - they don't own any HF and they don't care for it, unless one day 80
meters becomes the best bet for cellphone use.

In article <99tf4d$jmv$1@news.netmar.com>, K0HB@qwest.net writes:

>We have about 10 months worth of figures behind us, and it appears that
>restructuring has had little effect on the total number of licensees, but it
>does seem to have put more people on HF.

Yup. And lots of folks have upgraded to Extra.
>
>Looking at the no-HF/minimal-HF classes (Tech, Tech+, Novice) they have lost
>about 23,000 people since last April, and the full-HF classes (General,
>Advanced, Extra) have gained about 28,000.

Confusing the issue is the fact that since last April the FCC has been renewing Tech Pluses as Techs. Whether a Tech can operate HF is determined by his/her possession of proof of having passed the code test. End result is that the increase in Tech numbers comes from two sources: New Techs and Tech Plus renewals.

Back in mid February the first of the Technician licenses issued after the code test for it was removed began to expire. (Ten years after Feb 14, 1991). The good news is that, right on schedule, the number of Tech renewals surged upwards, indicating that lots of them are renewing.

http://www.ah0a.org

for lots of interesting numbers.

To equate the value of CW as being a skill that should be learned to save lives--and lift its importance to that level--opens up the argument that no one is worthy of walking the streets of humanity unless they have been trained in and have skill at each and *every* mode of ham radio, because each and *every* one of them has the same potential: to save lives! You are never in the majority of opinions, Larry, so I doubt you are in the majority of anything. There is not a majority of hams who know and can use each and *every* mode of ham radio. You don't have the skills or capability required to "save lives" in each, any, and all situations that you may encounter and *could* have used because you are a ham radio operator. Hell, most of us don't even have equipment with us at every moment of our potential to save a life! So, please turn in your license and join the ranks of those you despise--you are one of them.

Says who? According to the FCC's NPRM, restructuring was a:

"...proceeding to examine our rules for the Amateur Radio Service in an effort to eliminate unnecessary and duplicative rules, as well as to streamline our licensing processes."

Nowhere did they say it was their intention to increase the number of licensed amateurs.

Not quite, Cecil. Dictionaries and the like are basically useless
when it comes to issues of usage and application. They may
indicate what's become ACCEPTED, but not necessarily correct. One
example is a dictionary's explanation of the word "comprise."
It's correct to say, for example, "The U.S. comprises 48 states."
It is not correct to say "The U.S. is comprised of 48 states."
Yet the latter is used. It's incorrect.

That means nothing, Jon. The FCC's motives, one way or the other,
pro and con, were known 20 years ago. To paraphrase a recent
poster, no regulatory commission in its right mind purposely
makes statements that are going to raise any red flags or reflect
negatively on that commission.

>We have about 10 months worth of figures behind us, and it appears that restructuring has had little effect on the total number of licensees, but it does seem to have put more people on HF.

I don't see where it has made too much difference on HF, Hans. I heard a lot of new activity right after, but it seems to me to have subsided again, save for more activity on 10 meters.

>Looking at the no-HF/minimal-HF classes (Tech, Tech+, Novice) they have lost about 23,000 people since last April, and the full-HF classes (General, Advanced, Extra) have gained about 28,000.

Perhaps as a result of all the "old" Techs taking advantage of the grandfater clause? The Tech Plus's upgrading to General?

Hardly a dismal failure as has been suggested by others, but as I surmised before, a brief surge followed by "business as usual". The only one's who really benefited by this were the 5WPM folks who took advantage of the Tax-day Trade-up, and the FCC who now has fewer documents to process.

Your effort is appreciated. However....learning Morse by eyeball will NOT
help to learn it. In fact it will hinder you. Stick with the tried and true
proven methods.

More kids are killed in high school sports than in high school shootings.
Magnitudes more are killed in automobile accidents. We seem to have lost
all perspective when it comes to guns. Punish the criminals, not the guns.

Yep, the repeal of slavery took a constitutional amendment and the repeal of the right to bear arms will take a constitutional amendment. If guns are outlawed, unarmed citizens will be absolutely helpless against armed criminals who don't care about gun laws. England is doctoring her stats to try to hide the fact that their armed criminals are out of control. If an armed perp gets off on a technicality, that crime is erased from the stats.

In this country, guns have always been used for more good than evil. The liberal press simply doesn't report the good done by guns. Gun laws will disarm the good guys and leave the bad guys armed - bad idea.

> --

How true. When I went to school in Los Angels areas of California in the 60's and 70's almost every kid I knew had access to a firearm at home. Back then you could buy a gun over the counter at Sears, Montgomery Wards, JC Penny, Pep Boys, True Value Hardware, etc. cash and carry. You had to be 16 to buy a long gun, and 21 to buy a pistol but there were no laws against your parents buying you a pistol if they wanted to.

Many of the kids I went to school with were regular hunters and outdoorsmen along with their fathers, uncles, etc. I had three younger siblings and we all had our own rifles which our parents gave us as Christmas presents around the ages of 10 or 12.

There was never a firearms related incident in any of my schools, or even in my neighborhood (unless you count the time one of my neighbors shot some low-life who was trying to rob the local shoe store during the original Watts Riots).

There were also no drug dealers and gang bangers on every corner when I was in school. The record companies would never dream of putting out any of the "Cop Killer" Rap music which is present today - and the kids' parents would kick their butts if they ever tried to bring that kind of crap home.

The police were allowed to actively suppress crime rather than just reacting to it after the fact, but now days every hoodlum is taught at a young age "I know my rights, I'll sue you for ..." And parents are regularly prosecuted for "Child Abuse" if they try to make any attempts to prevent an out-of-control juvenile from running wild on the streets.

Yes, we have a big problem these days in the schools - and in society in general - but it is not, and has never been, a gun problem. It's a people problem, and as long as nobody in power has the "brass" to address it for what it is, it will only get worse...

Nope...doing it by that method will add another wall in the learning process. If one is deaf it would be better to use the hand to feel the code. If one must use the eyes then use a flashing LED.

You ask what is the difference? Think about it.....if one uses flash cards with the 'dot and dash' then the brain must then translate the 'dot and dash' into a form the brain can interpret.

If one uses the eyes and/or the fingers that step is no longer needed.

Your brain will tend to memorize the dot and dash and add that delay. It won't show up until you try to get over 10 wpm. And by then its too late and you will need to relearn CW. Not fun.

Why do I know this? I did it that way. I also ended up memorizing the
record(thats right the record). And had to re-learn it. I now do quite
well at CW. But it WAS a tough row to hoe.

>you may have missed.

>73, Hans

As I mentioned, Hans, it was a dictionary example, and

taken from many years ago. The problem with 'comprise'
didn't start after Hawaii and Alaska. And dumbing
down of the English language also started long before
it hit Amateur Radio.

Again, this matter has nothing to do with definitions, or
'disproving'--the encyclopedia and dictionary simply aren't sound
references when it comes to proper word usage and application.
Try any English usage book for starters. Or any English major
sitting on the copy desk of any prominent newspaper or magazine
to explain the ways of usage to you.

I thought you said that dictionarys are useless when it comes to issues
of usage and application.

> And dumbing
> down of the English language also started long before
> it hit Amateur Radio.

Actually, it has nothing at all to do with amateur radio.

If the English language has been "dumbing down", then it has been doing
so for several hundred years. Others claim it has been evolving.

But Richard,

What you are denying is that everybody is not like you and don't have the same interests or goals in the hobby. The requirements that *we* must meet are basic at this point, and each person should be allowed to make up his own mind to what license class he/she wishes to attain, and at what pace to go after their personal goals. No one is "preventing" anyone from attaining 20, or higher, WPM. The truth is, by setting oneself "above" anyone else because that person didn't enter the hobby under the same regimen, that person is doing harm to the hobby by discouraging new people from exploring our wonderful hobby. Instead, we "old heads" should be excitedly shaking hands of the newly testing people, congratulating them on their achievement, and once having assured them that they are WANTED within the ranks, ENCOURAGING them to explore the facets of the hobby, helping them with the privileges they now enjoy, and on to HF and our beloved CW. This is the way to ensure the future of the hobby and the use of Morse. Time marches on, Richard, things change, and you and I will be pushing up daisies some day, and the ones left behind will do what they want anyway. For every would-be amateur that we disdainfully regard thru our bifocals because their ticket says "Technician", I believe there is another person who received that treatment and told us to go to hell with his feet. Oh, he didn't say anything, but he walked away, got back in his car, and perhaps got on a CB and called, "Break, skipland, ya gotta copy?". Or drove out to the golf course for nine holes. All to the detriment, not only to the hobby itself, but to the rest of us who hope and presume we will have our spectrum into the future.

Ranting at the newbies is NOT the answer. They cannot help what regulations exist--they only fulfill the requirements for the license as they are. ENCOURAGEMENT to ever more achievement, welcoming new folks within our fraternity as equals, and readily answering their questions without hint of superiority will earn their friendship, respect and will assure the survival of CW and the hobby itself. Driving people away with self-righteous pontification about 30 WPM CW will send us the way of the dinosaurs. And that's my opinion.

My opinion is that your opinion is right on. My three year old
grandson is certainly not responsible for whatever amateur radio
requirement is going to exist when he takes his first ham exam.

So your point in quoting the dictionary was to show that there are 50
states rather than 48?

Yeah, right.

I for one will not look thru my bifocals at a Technician licensee disdainfully or any other way nor did I in this case. Give me a lot of self-serving crap about Morse and I will resemble Vesuvius on a bad day. It is not necessary to attack a mode nor anyone who achieved the license requirements current at the time to justify one's reluctance to take a code test.

It is the rule and it will be the rule for five years anyway. To bleat around about it is sheer denial in motion which I will not enable nor be politically correct in response to what is not so much a provocation as an attempt to scratch on my furniture. I have no problem strangling cats to cure them of the habit and have even less reluctance to point it out to Lifer Techs.

What Amateurs support personally and severally will not have any ultimate effect on the debate. If you want to 'debate', call me up when you are not engaging in some activity trap designed to help you procrastinate. Like when you have the General.

Dick N�BK

But by eliminating [entry into] some of the license classes, it saves the FCC the overhead cost of adminstering them. (Renewals cost the same regardless of class.)

The only difference I have noted is as a volunteer examiner, we've (as in the other VE's and I) had some increased traffic from Jan. 2000 until about Dec. 2000, mainly for upgrades. As for the unlicensed, I'd say that the traffic flow due to them is relatively unchanged (and that makes some sense, since the rules for the NC-Tech. entry level license were relatively unchanged - just a shorter written test).

The only real difference I note for the unlicensed is for children age 10 and under. Most of them got their first license as a novice, not a no-code-tech. That's because the old element 2 was simple enough for them, but 3A was a bit more difficult. However, they could pass 1A and enter that way. No longer.

Culley,
    I think your correct, most people learning CW for use

on the radio have no use for flash cards. That's a very
bad idea for 'audible' code. For 'visual' methods of using
CW (blinkers, etc.), it should be very useful.

I tried two: "The Little, Brown Handbook" (published, unsurprisingly, by
Little, Brown) and "The Scott, Foresman Handbook for Writers" (published
by--guess who?) Both say you're wrong; apostrophes can legitimately be
used to form plurals of letters, numbers and symbols. So far that's
three references versus the none that you've provided. So how about
letting us know which "any English usage book" you're referring to?

> Or any English major

As long as the English major didn't graduate from, for example, Purdue

University:
http://owl.english.purdue.edu/handouts/grammar/g_apost.html

> sitting on the copy desk of any prominent newspaper or magazine
> to explain the ways of usage to you.

Such as The New York Times?
http://www.google.com/search?as_q=50%27s&num=10&as_sitesearch=nytimes.com
The Washington Post?
http://www.google.com/search?as_q=50%27s&as_sitesearch=washingtonpost.com
Those too left-wing for you? How about the Chicago Tribune?
http://www.google.com/search?as_q=50%27s&as_sitesearch=chicagotribune.com

In short, you're just wrong.

Jon

There are a number of new "no code tech" licensees in my part of call area 9. They are enthusiastic to the *EXTREME*, well behaved, good ops. A couple are still in elementary school and (1) are learning every second they are on the air and (2) giving the experienced ops a big mental boost becuase they have someone on the air that they can "show the ropes".

Thank God they are not surrounded by a bunch of old-fart, cynical, name-calling, holier-than-thou or vulgar-as-hell "examples" of hamdom like many that frequent these newsgroups. Let's hope they never learn they are not "real hams" because they would probably joins the ranks of former and inactive hams, of which we have far too many already (and in my opinion, there are a whole bunch of you who should be in the category but aren't -

```
you and the rest of us would both be much happier I think if you were to

You are just as wrong as you can possibly be, as most anti gun people consistantly are. I have absolutely no intention of killing anyone with a gun, but I also have no intention of allowing you to confiscate them. I DO have an intent to use them - the mere existance and presence - to deflect those who would cause bodily harm to me and my family. Almost always, the mere sight a weapomn of defense is more than enough to put the coward to flight. Should the assailant be in an unusual state of mind, such as drugged or insane, and insist on forcing me to use a firearm to stop him, of course that would be the natural progression of things.
Soit was when columnist Mr. Carl Rowan, a rabid anti-gunner, shot an intruder. He sure changed his tune in a hurry. Curious thing, that he even OWNED a gun, what with all his anti-gun rhetoric, isn't it? Do YOU own gun, by the way?

 Now, it would
> seem to me that the very same amendment you guys are pulling in the case of

I'm not real eager to take seriously the opinion of anyone who can't
differentiate between a personal firearm and a nuclear weapon. Looks
like a screw may be loose somewhere.

Larry, I guess we should all acknowledge your legal prowess and your
vast experience in radio. I guess I would if I thought you knew what
the hell you are talking about. Like it or not, if you'd like to put a
signal on the HF bands, you'll have to pass the minimal 5 wpm test for
the foreseeable future. You'll not get your "gimme" any time soon.
I, for one, would not sit and wait until 2003 if I wanted to access the
HF bands, I'd be busting chops to learn that code and get my upgrade.
You, on the other hand, can sit here bemoaning the inequity of life
until then.

Dave K8MN

First and formost, selfpreserveation, on a the BOD level. Consider the January vote on whether or not to support code testing at the next ITU meeting.
The vote to drop code testing was by a voice vote, with no identity of who voted how. There was a lone effort by a BOD Member to poll the BOD for each member's vote, which was quickly voted down. None of those voting against keeping code testing wanted his vote made public, and without a individual poll of the vote it will not be, officially at least. Since the BOD members are elected as individuals, the entire BOD can't be held accountable for such a vote since they can't be elected

nor unseated en masse.
  Just a bit of defense against the will of a large bloc of ARRL
members' wishes. Selfpreservation at it's finest.

and what
> do you propose as an alternative to the *only* national amateur radio
organization?

Oh, no, alternatives haven't proved viable to date. Just understand that
the enemy is not always outside looking in.

>
> Look, clearly it is in every US ham's interest to retain as much spectrum as
possible
> for as long as possible.

 Not at all. We use little of our UHF/SHF allocations, and it might very
well be in our best interests to "trade" some of that unused real estate
for some we could make better use of, maybe on HF or VHF. I think that
most of the Part 15 intentional radiator devices would be much better
off above UHF instead of on HF where they do far more damage, but that
battle was lost long ago.

 Fiber optics in every house will alleviate the pressure, but

for
> the survival of amateur radio. Once we absolve this fact, the choice is simple:
we
> either support our one and only ham radio representation in the world or not -
we
> keep our hobby alive or not.

 And while we're at it, keep the heat and pressure on them...

 Of course you're right. Governmental "simplification" strikes again.

 Yes indeed, only in terms that are more basic and harder to refute.

 How can anyone say that radiotelegraphy is "useless" when it can be
accomplished
at minimum by a single vacuum tube device acting as both the transmitter
and receiver, a device which any competent ham can put together,  while
it takes hundreds of thousands of active devices plus extensive
extremely complex software which very few hams can produce to use any of
the more advanced digital modes?

And since when is in the public interest for ham radio operators to be allowed to avoid causing themselves to be functional in the most basic radiocommunications mode?

Answer: Never.

Your opinon is your opinion. Nothing more, and certainly not the law of the land nor a court decision. The fact that technology ALLOWS other more efficient means of radio communicaitions does not mandate that they will always be available nor the mode of choice. No one gets to choose the mode all the time.

Because slave ownership is illegal nowadays while gun ownership is still protected by the 2nd Amendment.

> ... a thermonuclear device falls into
> the same category of "firearms" as a six-gun. They are both devices used for one
> purpose only: to kill people.

Actually, pistols are most often used as a deterrent to avoid killing people. All I had to do one night was to display my 9mm and the mugger with the knife broke an Olympic record running away.

Did you hear about the eight year old who got suspended for pointing a chicken strip at a teacher and saying "pow"? One wonders what would have happened if he had pointed the chicken strip at a teacher and said, "yum".

Would you kill the person trying to confiscate your guns?

I had diphtheria when I was three years old. I would have died without
antitoxin shots. The doctor didn't want me to hate him in later life
so he had my mother hide my eyes so I wouldn't see who was hurting me
for my own good. That's what the ARRL BOD did for you, Dick.

Since S25.5 will probably be repealed and since a ham doesn't need
to know Morse code to participate in emergency communications.

You live your life your way, Larry, and allow me to live my life my way. I believe in being prepared. Therefore, I am equipped with spare rigs, amps, solar power, generators, and battery backup. For emergencies, I will choose 500w SSB over 5w CW any day of the week.

Therefore, Morse code is not basic to Homo Sapiens. Glad you finally admit it.

I'll bet 2/3 of HF hams cannot effectively use CW for emergency communications right now, Dick. What are you going to do about them?

You misunderstood the argument, Larry. I said that Morse code testing should be eliminated in order to attract more engineers into the hobby. That actually happened. I Elmered about 50 no code tech engineers into the hobby while I was at Intel.

Any ham who wants to give up amateur frequencies to the commercial
interests has a death wish for the ARS. That's you, Larry.

You don't read very well, do you, Larry. Read it again.

> And don't look now -- but I "learned" the Morse
> code at greater than 5 WPM capability in about two days.

So, given my stated boundary conditions, you don't get to start on
your CW transceiver design for two days. I can whip out an AM
transceiver in less than one day. You lose. And any old transistor
amplifier can be used to modulate an AM transistor transmitter.
I have three of them in my garage.

>
> Knock, knock -- Earth to Cecil -- Why do you think this is so?

It doesn't matter why it is so. All that matters is that it is so
and is becoming more so all the time. Earth to Larry - this is the
21st century. Things have changed. You cannot live in the past.

> I have absolutely no objection to the USE of Morse code by individual

If it's required, it's not optional, now is it?

> The problem here

Nope, you're the one who sells your fellow hams short. You think they won't learn Morse code without a governmental affirmative action program. Sounds to me like you're the socialist. I'm just a Libertarian who believes the least government possible to accomplish the function is the best way to go. The Morse code affirmative action program is bad for the future health of the ARS.

Who said that radiotelegraphy is "useless"? The discussion is
not about radiotelegraphy. It is about the governmental Morse
code affirmative action program. Why should hams be barred
from shopping in a free market of modes? How would you like
to be forced to use my favorite brand of tooth paste?

Seems understandable to me since this is the first time he has ever
renewed his license and the FCC recently changed the renewal procedure.

Ah, very good. trying to get a machine to think like a human. It still
can't come close to copying under conditions that a skilled human can. I
suppose if that's what you've got, you gotta use it. I'd just forget it
and use PACTOR or something else.

Your computer could never begin to copy CW under the conditions I
learned to copy under. The receiver of the day was a WW2 bomber set
which covered the entire novice band in � inch of dial. I don't know
what the bandpass was, but you could hear a substantial of the entire
band at any one dial setting. One quickly developed the "filter between
the ears" which zeroed in on a single signal and just tuned out all
others. Try that with your computer. I've used a number of software
packages since computers came into use and so far nothing has come
close.

Rob you got here a little late..we all know about all the glitzy new
modes, how well they work and what it takes to make them go. Many of us
have used them, some extensively. I was an early PSK31 user and found it
to be a neat mode, though not as good as billed by the raving techies.
But there is still no other mode than radiotelegraphy which does so much
with so little.

We have about 10 months worth of figures behind us, and it appears that restructuring has had little effect on the total number of licensees, but it does seem to have put more people on HF.

Looking at the no-HF/minimal-HF classes (Tech, Tech+, Novice) they have lost about 23,000 people since last April, and the full-HF classes (General, Advanced, Extra) have gained about 28,000.

It's not everyone here in the USA, just a select few who have a bug about
non-CW code tested Hams. Hang out on this news group for a short while, and
you will get to meet some of those select few. You can do that by suggesting
to get rid of the CW code testing requirement, and they will announce
themselves by getting on your case like white on rice. Never fails.

Heck, consider it just slang.  Personal preference if need be.  Question is,
if you are going to make it plural, what is the apostrophy for?  A
contraction for 73 is or is that the possesive form?

73ssss (as in best of 73s - or multiple thereof) from Rochester, NY

Leland, you and I know what sort of flames can start with that old saw code vs no code. Seriously however, perhaps someone might enjoy a CW qso at perhaps 30 WPM with an extra. Are you sure that guy is really doing 30 - or is he using a computer?   Hmmm .... come to think of it, if I get back on HF CW, I might be accused of using a computer; however it would be simply a case of being fussy about my fist and having the keyer dot-dash ratio set properly. However, if it is not possible to know if it is a human or a machine sending and receiving the code, it would seem the whole argument is moot. It is fun to handle those arguments on one of the repeaters, however. One guy was going into the rants about the necessity of CW and we simply switched to about 40 WPM F2 emission (yes, the repeater owner was in the gang and he said 'go for it' - he has no problem with 40. It did quiet the discussion down. A lot.).

73 from Rochester, NY
Jim

ps - what's the new nomenclature for F2 anyways (not that it is of earthshaking importance)?

Well, 'round these 'hyar parts, we ain't gonna have no "sich" carryingson! Them fellers don't git NO repeaters left on to git their jollies wit'! LOL!

It still escapes me how seemingly grown people can exhibit such infantile behavior. Like I said, most of the control ops around here are very militant and particular as to what they allow to transpire on their machines, and they will drop one out from under an idiot in a New Yawk minute. The vast majority of local hams are in lockstep with the controllers. As we sometimes say in our Southern drawls, "We ain't a-gonna have it!" I wouldn't have patience with such immature clowns either on a repeater or OFF.

It is obvious that the outlook on life is vastly different here in the Southeast than on the Left Coast. Without putting down those mature, reasonable, and responsible hams, I must say I cannot understand whatever it is that makes people revert to infancy, or whatever condition it is that causes this behavior. I wonder what these jerks would do if they migrated to NC, and found that no control op would tolerate their antics? Maybe that is why you don't hear much about NC repeaters and Riley H?

What difference does that make ... the whole idea to radio communications is the communications ... whatever mode you use to get the information accross is irrelevant.

Simply because you had a bias towards the nestalgia of cw. And, I didn't tell you how to get it working because I thought I was the first to do it ... I did it because you said that it takes a lot of equipment (showing your ignorance)

Not quite.

"How many 73s [no apostrophe] do we have?" is the "perfectly acceptable" version. "73's" is acceptable only when referring to something belonging to a 73.

I love a good pedantic argument, so... Using "'s" to form plurals of
letters and numbers is common, accepted practice. See the "Handbook of
Style" chapter of the Merriam-Webster "Webster's Ninth New Collegiate
Dictionary" for one reference.

The FCC did not use the word superfluous to justify deleting
the 13 & 20 wpm code test. They said the tests served no
regulatory purpose. They did not justify the 5wpm test, except
to say it met the international requirement. Unfortunately,
the FCC did not give any insight on how they would view
the 5 wpm test when S25.5 is deleted. The FCC made
no superfluous findings.

This should RRAP group arguing about the code test
until 2004. :-)

Larry KC8EPO

 I've tried all that. You won'd get close to manual CW copy in noisy
conditions with any computer program.
```

>

Of course I didn't say whan that was, but it was a hell of a long time
ago.
And that makes no difference whatever to you because you have no
intention
of learning it at all. And of course you know all about it. If you gave
out ham tickets with Cracker Jacks you wouldn't do any better. Might
draw few dinks like you.

> Simply because you had a bias towards the nestalgia of cw.

Until you learn how to copy CW in poor conditions you won't have a
clue. And that means you'll remain clueless.

And, I didn't
> tell you how to get it working because I thought I was the first to do it
> ... I did it because you said that it takes a lot of equipment (showing your
> ignorance)

A computer and a compatable SSB capable radio-- several hundred
thousand active devices. Not really that much,huh, I guess you carry a
computer around with you at all times. Right.

They did exactly what I expected them to do. I've watched the ARRL HQ closely for so long they aren't a bit difficult to anticipate.

No way, Leland. When we see someone who cannot or will not face the reality of a code requirement, we have to come down like Monty Python's big foot or we would simply be enabling denial mode. It is the bleating, not the opinion, that gets the reaction.

Hey, RG -- what about those of us who didn't -- you lazy, dumbed-down
little weasel? What about those of us who didn't fall all over ourselves
to hand-carry another helpless, technically uninvolved so-called Technician
through another ten years of amateur radio? Please, feel free to not
bother to renew your license -- the same way you felt free to not bother
learning anything about ham radio on your own initiative. OH, sorry I
used another word you probably don't understand. Why don't you
have someone look it up in a dictionary for you? Oh, and if you don't
like what I just said about you, have whoever is posting your messages
on Usenet whine about it some more! I'm sure it will bring out a lot of
support.

An apostrophe is often used when making letters or numbers plural - for example 45's (more than one 45 music record). Of course, it is just as common to not use an apostrophe, but many English fanatics would insist the apostrophe is virtually required (the number "5" replaces the written "five," so to add a written "s" to a number would require the apostrophe because of it's combined form). In other words, it does not refer to the possessive form of the number unless used in that context in a sentence.

Han:

That wasn't a perfectly reasonable question. It was a troll, one which
sought to invoke responses like mine and others which splattered this
idiot for making such a wimpish, mentally impoverished request for
"help" when he obviously possesses what he needed to find the
answer on his own, with a little effort. That posting deserved the
negative replies it got, and any such posts in the future will be handled
in exactly the same manner, I assure you.

I dunno about that ... I think 80 gets pretty awful sometimes, and even using my wr1500i which has a pretty bad receiver I can pull em out easy enough. Its not that hard ... as i said ... when you can see amplitude vs frequency data for the audio spectrum its just a matter of clicking where the appropriate signal lies ... and you will see it on the graph even when its barely audible ... once you have picked the appropriate frequency it will be easy enough to take the morse out of it since you have essentially masked the other frequencies out. And, anyone who has dealt with audio will tell you that higer frequency stuff (8kHz+) will mask the lower frequencies quite nicely to the point that they may be unrecognizable.

Well when you consider the whole point to the licencing in the first place was to make sure that operators had the skills required to be able to operate properly. I don't see how cw is required to operate properly. However, I'd say teaching people manners and testing them on it would be nice.

> Until you learn how to copy CW in poor conditions you won't have a

> thousand active devices. Not really that much,huh, I guess you carry a
> computer around with you at all times. Right.

Well I carry one around about as many places as I have a radio. My home
station and in the car. It's pretty much standard equipment to any ham
station now anyways

> ten ham bands?

ya of course a cw transmitter is easy to build. But I am not about to toss
my 706 so I can build my own rig. Heck, I don't have the time for that.
I'm there to chit chat, not build cw transmitters that fit in kodak film
boxes and crap.

And I am sure nowadays the first thing we are going to do when we get in
trouble is plug that key in and tap away. Not that everybody and their
brother doesn't have a ssb rig to yell HELPPPPP on.

Engineering, from what I saw of engineers when I was doing my physics degree, they were a bunch of drunken text book memorizing anal types. They generally had to read it in a text book before they were able to understand the most basic concept. No intuition at all.

Restructuring probably just reduced costs and effort on the part of the FCC than anything else. Got rid of the medical wavier for high speed CW issue too.

Active languages also go into decline, Hans. It is not a mutually exclusive proposition. That's why we still have people saying "A is comprised of B and C," instead of "A comprises B and C." That's why we still have people saying "The amplifier has an input capacitance of 5 pF and it's gain is 20 dB." (Instead of "its" gain). You'll find that sort of stuff all over newspapers nationwide, every day of the year. With each 'evolution' in language, there's another contingent trying to make it sloppy.

Regards,
Vince, WB2EZG

> Amendment, and it's not happening in our lifetime.

Don't look now, but the Second Amendment has already been essentially
repealed. Am I free to bear arms inside a US Post Office? A lot of
the federal gun laws are unconstitutional.

It's more than tolerated, it's *used*, and by leading publications.

> The one I just provided above re: CPUs is typical of any that can
> be found in any good engineering journal. I don't see you, or
> your professionals, arguing with it.

That's because neither they nor I are trying to apply a "rule" to all
cases, as you are. You argue that since "CPUs" is used rather than
"CPU's" that "50s" must be used rather than "50's." That mindless
insistence on a rule is what's wrong with your position.

```

Some of you argue that CW proficiency examinations are necessary for emergency communications, and that CW knowledge will save lives. I have maintained proficiency in medical first aid, CPR and AED for 27 years. I used those skills many times to assist injured people, some with life threatening conditions. While I often use VHF radio communications, I have never seen a situation that needed or warranted CW communications.

In your life experiences, which proficiency will save more lives, CW or CPR?

Larry KC8EPO

Nope, that's not the point. Emergency preparation is left up to the individual ham. The government doesn't even require an RF transceiver. Why, then, should it require Morse code skill? If Morse code skill is seriously required for emergency communications, one would think an RF transceiver would also be a required necessity.

That's the point, Dick, you finally got it.

The point is, Dick, if they stored food and water, they wouldn't need CW.
If Morse code is required, why isn't food and water storage required?
Why isn't an RF transceiver even required? It makes absolutely no sense
to require Morse code skill and not require any RF equipment to go along
with it.

Don't you think that should be a matter of free will choice in a hobby in
a free country rather than making it a governmental affirmative action
requirement?

It's hard to be an accomplished CW operator when one is going deaf.
I can't even hear the noise much less the CW buried in the noise.

Xref: supernews.google.com rec.radio.amateur.policy:18168

An interval of about every 6 months seems to be best for posting new editions of this list. At that time, Vince's posts, and rebuttals to his posts, have been voluminous enough to put together a nice collection of new quotes. The first two editions can be viewed at:

http://www.novia.net/~pschleck/vince/

The following quotes were taken from rec.radio.amateur.policy from late 2000 to early 2001. All are presented without internal modification (including correction of spelling errors), but have been trimmed from the original posts for brevity.

"> No, May 1965 QST has the Docket.

Oh. Thanks for the clarification of your citation. I must have been thinking of the other citation you use.

So now I'm off to the flea markets to hunt for a May 1965 QST to find out if the opinions of people who haven't run the FCC for 35 years bear any resemblance to the Commission's present view of the Amateur Service."

- Jim Kelley, AC6XG

"Again you want to relive a 35+ year old docket to justify your claim while ignoring the current and most recent R&O which appears to in no way sustain your argument."

- Bill Sohl, K2UNK

"No doubt the FCC is just doing as they were ordered to by the Bilderberg Group. Or was it the Trilateral Commission?"

- Jon Bloom, KE3Z

"> That's why there
 > was a petition for reconsideration that basically picked the
 > Commission apart, like a John Unitas two-minute drill.

Yep, and that petition was just as effective as a present day John Unitas two-minute drill."

- Cecil A. Moore, W6RCA

"Whatever makes you happy, Vince. But when I turned on the radio this morning, there it was - still there on 40 meters; amateur radio. You must be thinking of something else."

- Jim Kelley, AC6XG

"So they will do what they want, but 20 years after deciding to eliminate the amateur service they have yet to get it eliminated? That makes no sense at all."

- Jon Bloom, KE3Z

"Seems to me, Vince's false hope is that the ARS has already gone away."

- Cecil A. Moore, W6RCA

"The world according to Vince: The FCC has no allegiance to anyone, is on a 20-year mission to destroy ham radio, and is unable to figure out how to write a response that says: 'Nothing new here. Dismissed.'"

- Jon Bloom, KE3Z

"So the organization that feels it can do what it wants, owes allegiance to no one and feels that those reasons make it necessary to protect its public image double speaks in its Report and Orders so that you can see the Big Lie?"

- Ed Hare, W1RFI

"So the organization that says and feels whatever it wants and owes allegiance to no one is senstive to the policital nature of Amateur Radio and wants to protect its public image by... Man, this has gotten so convoluted I can't even type it.

Let's just say I think you are dead wrong and let it go at that."

- Ed Hare, W1RFI

"Oh now I get it. They 'know enough to keep quiet' so as to keep from getting 'nailed' because Congress has a 'history' of wanting to 'dumb down' amateur radio operators until they can no longer fix or even use their radios. And by then they'll be so stupid that the radio fairies can come right down and take away all the radios. And the FCC can finally sell the spectrum to Kenwood. And Vince can finish smoking the rope the FCC supplied.

The End.

So let it be written, so let it be done, thus spoke Biancomano."

- Jim Kelley, AC6XG

"I predicted they'll say: 'Nothing new here. Dismissed.' I also predict that when they say that, you'll claim they're REALLY saying something else that only you truly understand."

- Jon Bloom, KE3Z

"Are you criticizing the FCC for not being dictatorial and for working with the infrastructure it is regulating?"

- Ed Hare, W1RFI

"> a Commission-to-Amateur Radio relationship doesn't exist in a vacuum.

Should it?"

- Jon Bloom KE3Z

"If Vic Clark said it was impossible to arrest the evolution and development of the ARS, he was a smart man and you should listen to him, Vince. If he said that it was possible to arrest the evolution and development of the ARS, then he wasn't so smart."

- Cecil A. Moore, W6RCA

"Do you believe that is less effort to study the 200+ page Now You're Talking and a 400-question pool to enter ham today than it was for me to enter ham radio by studying a 4-page study guide?"

- Ed Hare, W1RFI

">I've known 12-18 Extras who never learned Ohm's Law,
 >by their free admission

Vince, I find it hard to believe that 12-18 Extras would freely admit that to you. Your attitude towards these new hams has not been one that I believe would engender such confidence.

I am curious, though; is it 12, or 18? Why the uncertainty?"

- Ed Hare, W1RFI

"Oh, wait... it is either one or a trillion of them. Glad we didn't bring any extremes into this discussion. :-)"

- Ed Hare, W1RFI

"Why can't they be like WE were... perfect in every way. Musta' been that long walk to school..."

- Ed Hare, W1RFI

"Humorous post, Vince. Irrelevant, but humorous. The mind works in mysterious ways.

Here's what actually transpired:

Jon said:
> >Please give an example of a simple Ohm's law problem.

You said:
> One example:
> For Technician, a bona fide (non-trivial) series-parallel
> resistive network would do, where it's going to be an advantage
> to at least once have to determine an equivalent resistance in
> order to solve the voltage or current across/through some element
> within the network. For the higher classes of license, you'd want
> to have at least one resistor in a diagonal configuration.

Jon said:
>Okay, so it's a DC network analysis problem. How about we call
>it that from now on so people won't think we're talking about
>Ohm's Law when we're really talking network analysis?

You said:
>That would depend on whom you want to scare. 'Network analysis'
>to many implies engineering-grade knowledge and the parlance that
>goes with it.

Jon said:
>Well, if you want hams to be technically astute, having them
>learn what terms actually mean is certainly worthwhile.

You said:
>Whatever your wish. To me, it's an Ohm's Law problem.

Then I said:
>I don't know if it's entirely accurate to call an equivalent resistance
>problem, an Ohms law problem.

Then you said:
>I haven't.

And ever since then, you've been going around in circles. Well, not
circles really. More like lissajous figures or a Mobius loop."

- Jim Kelley, AC6XG

"Actually, I find that conversations with Vince bear a remarkable
resemblance to a Klein bottle:
http://www.sff.net/people/asaro/klein.html#bottle"

- Jon Bloom, KE3Z

"This is the sort of thing that gives mindless pedantry a bad name."

- Gore Vidal

"> No, I didn't tear into you, Jim.

'You'll have to troll alone tonight.'

'Keep praying for that break, Jim. Have another drink.'

'If you had a case, you'd have made it. Indeed, if you had a case, you'd also be able to spell the word 'blatent' correctly with a straight pen.'

Then please explain how these statements relate to ohms law, and support your assertion."

- Jim Kelley, AC6XG

"Apparently, (Biancomano) believes that it is sufficient merely to assert."

- Gore Vidal

"Would you mind telling us what planet you are from, Vince?"

- Cecil A. Moore, W6RCA

"So you say. If it isn't something that has been published by the ARRL or posted here, just how does anyone have a clue as to what your 'details' really are?"

- Bill Sohl, K2UNK

"Another non-answer. Humor me, Vince, please answer the question even if you are repeating yourself. I don't remember you offering any 'real-world consequences' before. Seems all I remember are imaginary deluded consequences."

- Cecil A. Moore, W6RCA

"That's a mouth full of unspecified jargon. You offer not one practical example of what/how you'd accomplish your goal...and you again avoid answering the fundamental question..."

- Bill Sohl, K2UNK

"Vince is asked for copies of all of this documentation, even offered 25 cents a page for reproduction. Vince refuses, stating (paradoxically) that his revealing such evidence would made it LESS CREDIBLE (as if it's more credible unrevealed?) because he could be accused of doctoring it. This is reminiscent of Vince's refusing to prove Fred Maia's 'women and children' quote unless Fred denies it in writing (Fred says that he doesn't recall)."

- Paul W. Schleck, K3FU

"Mr. Sumner probably didn't want to come right out and say that they have a specially shaped file for Vince's documents."

- Jim Kelley, AC6XG

"I found that the kill file worked wonders in 'understanding' Vince. ;)"

- Jim Rosenthal, WA4STJ

"No explanations are necessary for statements one extracts from the nether regions of their anatomy.

'I believe it, ergo it is fact' is the operative phrase here."

- Fred Hambrecht, W4JLE

"Oh, and by the way, which of your opponents for Hudson Division Director made that quote which you paraphrased as:

'you know, there's no reason for Amateur Radio to be a technical hobby today, simply because there's no jobs for engineers. You know, my father was a plumber, and advised me to do the same. Looking back on it, you know, he was right.'

?

The individual who defeated you four times says that his father was not a plumber, and nothing resembling such a statement was made by him."

- Paul W. Schleck, K3FU

"Vince, you remind me of a friend of mine. When I asked him what
He would do if his wife caught him in bed with another woman,
he answered, 'I'd just deny it.'"

- Cecil A. Moore, W6RCA

"If anyone out there thinks Vince answered ANY question in full I'd like to hear from you."

- Bill Sohl, K2UNK

"Oh, God, Vince. Are you *still* around whining? Sheesh, you love being miserable don't you?"

- Kim Walker, W5TIT

Thank God! You had better hope and pray that those in power are never able to convene a Constitutional Convention again. With the current beliefs and attitudes of many in Congress these days the Second Amendment is not the only thing that would be at risk. The First Amendment would be right behind it, and then the Fourth, etc.

A Constitutional Convention is the single most dangerous thing that the current crop of politicians could do. The aftermath would be the end of the United States as we know it...

Heck, mandatory crash helmets for all vehicles would save lots more
lives than mandatory Morse code.

You've made no distinction between 'used,' 'tolerated,' or being
'plain sloppy.' The fact that it's 'used' thus means nothing.

>> The one I just provided above re: CPUs is typical of any that
>>can be found in any good engineering journal. I don't see you,
>>or your professionals, arguing with it.

>That's because neither they nor I are trying to apply a "rule"
>to all cases, as you are.

I believe it fair to say in many cases, they've forgotten the
'rules.'

>You argue that since "CPUs" is used rather than "CPU's" that
>"50s" must be used rather than "50's." That mindless insistence
>on a rule is what's wrong with your position.

I think Len's overview on what the user/style guides say on the
matter pretty much sums it up.

Of course, CPR has saved many lives, but how many lives has the use of CW saved over the years? Many, many more I would think. A minimal proficiency in CW would certainly be a benefit and not a detriment to the hobby. I don't believe it has to be all or nothing. I maintain a proficiency in HF voice communication and procedure for the same reason.

With my work with Red Cross (Canadian) as well as when I'm on the road, never once have I ever felt the need to tap away at the keey when an emergency arose. The people I would be looking for help from would in fact be close enough that voice communications on hf would be quite satisfactory. Never once have I asked for help from a distant station in timbuktu. What would be the point?

Furthermore, at home or in town; why wouldn't I simply call for help on the phone or cell? Would be far more efficient!

No Vic Clark this time. The closest I can get to a suitable quote
on the previous subject under discussion is this:

"Biacomo (Biancomano), I jumped out of an airplane yesterday
without a parachute! Does it matter? Boyzzzz, you just can't get
a decent job done today!
---George Olsen, 1960

I think lids, kids and space cadets are fine if they want to use ham radio. They, like all the rest of us, should have at least a smidgen of civility and behave accordingly on the air (and in the newsgroups). "Do unto others, etc. etc."

Somewhere along the line, the quest for "free speech" seems (at times) to have devoured the responsibility for common decency.

When you are not face to face, it seems that anything goes. When the fear of a punch in the nose is removed, the tongue loosens, inhibitions disappear, and insults start flying. Not unlike the effect of a half-dozen beers.

I'm a Cowboy, not an Indian. :-) And Robin Hood would probably have traded
his bow and arrow for my SKS with a 30 round magazine full of armor-piercing
ammo. Can you imagine the king's armored knights charging Robin Hood equipped
with an SKS?

I don't think so. That's what Kelly WANTS to be the "bottom line."

The biennial restructuring of ALL FCC rules and regulations is
simply one more step in the evolution of ALL radio regulations,
amateur radio included. FCC 99-312 (the R&O) brought US
amateur radio a bit closer to the reality of today's US amateur
radio.

There is a constant among those with the long-timer/old-fart/Lifer
mentality: All the major regulations should remain the same as
when They became licensed...and they will continue to advocate
that as long as they continue to view the avocation in their own
personal terms. There is absolutely nothing but personal

preference in such a viewpoint and that "p-p" is totally against
the wishes of the amateur community at large or the desires of
those who might want to get into that hobby.

>saved over the years? Many, many more I would think.

Unproven except that such is your opinion. Please provide as many
examples as you think necessary to enforce the FCC regulations
requiring a morse code test for an amateur radio license...for the
FCC's purpose of regulation.

Please note that modern emergency communications involving life-
saving services use VHF and UHF Public Service bands, not HF
bands. [the Titanic sank in 1912, some time ago...]

>A minimal proficiency

>in CW would certainly be a benefit and not a detriment to the hobby.

Then let it be optional in USE, not part of the license test. Amateur
radio is NOT primarily a public safety radio service.

>I don't believe it has to be all or nothing.

This is a definite change in Macy's stance of the past.

>I maintain a proficiency in HF
>voice communication and procedure for the same reason.

Why not include a "proficiency test" at amateur radio bands above
HF?

It's remarkable that, on reaching middle age, the "wisdom" of
life experience of some individuals suddenly decides that the
world is going to hell and "things were so much better when
I was young/younger." :-)

Until the attitudes of Real Hams change, and we end this
seeming intolerance of non-morse-coders, the problems of
amateur radio policy arguments against amateur regulation
changes is not going to stop.

The written word is a form of communications. There are rules for style/syntax of English. Those rules are used by those who accept or reject written words that are communicated on paper or on screen to hundreds and thousands of others. Such is the "test" that is met every day by writers of all kinds, amateur or professional. The "test givers" are the editors.

The argument on style under this thread has bogged down into some rather selfish insistence of "being right originally" in regards to the apostrophe indicating a special plural form. While some publications accept that special case of "73's," the vast majority of editors and publishers will go for a more mundane plural "73s" with no apostrophe. Rationalization of use of an unacceptible style form in a newsgroup as "being correct" by personal insult of another does not make such rationalization "correct."

What is interesting is the VERY RIGID stance on form and style in amateur radio must be preserved at all costs, yet someone's personal style of the written word is now "correct" simply because they used it. What is wrong with "live and let live?"

>to "true professional work" in your view?

I can provide several examples in the March 30, 2001, editions of
the Los Angeles Times, the New York Times, the Wall Street
Journal, all of which contain at least one typographical error.
I would consider those three to be "true professional work" insofar
as journalism is concerned.

I can start listing a few hundred titles of professional work which
are in front of me as I type this (in 39 lineal feet of book space),
but that would not settle the argument. The argument has settled
into the "I'm right and you're wrong" sort of heckling.

>Red herring. We're discussing the use of the apostrophe to form plurals
>of letters, numbers and symbols, not the use of the word "comprise." All
>the comprised's you care to cite are beside the point.

Your last sentence should have been written "All the compromises you
care to cite are beside the point."   :-)

>> It's reading the fine print in users' guides that count, Jon.
>
>Please cite the fine print, Vince.

The "fine print" (metaphorically speaking) is in the TEST of
whether or not an editor with red-mark your copy, thus
pointing out mistakes. Real Writers pass such TESTs every
time they submit something to editors.

If you wish to align yourself with K0HB's "evolving language"
(which does not, apparently, have to follow "rules"), then here
is an example of a word found in this morning's Los Angeles
Times: "Amped" rather than "amplified."

Amusing in regard to the rigid, set-in-everlasting-concrete
"rules" of amateur radio jargon, style, and even opinion.
Anyone differing from such rigid rulemaking is obviously not
a "Real Ham" nor can they ever be one. :-)

>A comprises B and C.

No, not to purists. Under such conditions, they could say:

B and C COMPOSE A; or alternatively,
A IS COMPOSED OF B and C. Or, turning it around,

A COMPRISES B and C.

The general rule is that the whole comprises the parts,
and the parts compose the whole.

> It's 'bout 10dB more effective than ssb. You'll be dead & gone before
> the last ham cw qso.

Actually, you mean you can hear a signal that is 10dB weaker. Efficiency has nothing to do with it. Fact is the average cw'er is around 12wpm. You speak and type far quicker than that. Not to mention more information is carried per watt in a ssb transmission.

> Don't know history either, huh?

Who developped calculus? Who developped theories on EM and optics? Who practically wrote the book on QM? Who is developping theories on elementary particles?

They were all physicists. Engineers take our texts and copy our info to design products.

> That's astute. Go back to 10m Son.

I operate on the lot of the HF bands, not simply 10. 10 is dead.

US Amatuer radio is becoming more like US amateur radio. Well that's
certainly hard to deny.

He sure showed you, Brian.

I seriously doubt that. In the last decade there has not been
any lifesaving CW episodes. How many people did CPR save during
that same time?   Probably hundreds or maybe thousands.

There may have been a day when CW saved many lives
simply because CW was the ONLY mode in use for such
situations. That is simply no longer the case.

>A minimal proficiency
>in CW would certainly be a benefit and not a detriment to the hobby.

If you stated that as being on a voluntary basis I'd have no
argument. The facts, however, to support your statement as
a mandatory test requirement don't add up.

> I

>don't believe it has to be all or nothing. I maintain a proficiency in HF
>voice communication and procedure for the same reason.

Those that want to can and should be free to maintain CW
proficiency. I support you on that...BUT not on mandatory
requirement for same.

Cheers,
Bill K2UNK

But, today, it is not the fancy of an old man reminiscing about the "good old days." Things were better years ago, and all of the available statistics prove it.

"This seeming intolerance?" Boy, I must have missed something in what I wrote.

You obviously have a computer, so training software is the way to go. One good
resource is:

http://www.ah0a.org.

Also take a look at N0HFF's excellent online book at:

http://www.raes.ab.ca/book/index.html

Covers all aspects of learning and using Morse in detail - and it's free!

In article <3AC3F70A.27AA@bellsouth.net>, Jerry Oxendine <joxendi@bellsouth.net> writes:

>Presuming that you have no handicaps, like all have said, forget about any "aids" that depend on reading. Think about it: CW is mostly about hearing sounds that you quickly (and, later, automatically) interpret as letters or words. Use AUDIO aids instead of anything that you read or memorize. The fellows are telling you exactly right: the use of "reading" aids will only add to the learning process and hinder your learning of CW. There are a variety of tapes available to progressively move you along to 5, 10, or faster speeds.

I agree 100 % with all of the above. Charts, flashcards and other visual devices cause all sorts of problems in learning aural Morse.

All sorts of Morse training freeware is available, too. Surf over to

http://www.ah0a.org

and download Morse Academy, for an example.

Also, don;t make the mistake of thinking you have to learn 5 wpm forst, then slowly progress to higher speeds. Set the character speed to 15-18 wpm and the word speed to about 7-8 wpm to start. Avoids bad habits like "counting dits".

> Also, DO NOT touch a sending key at all.

I DISAGREE!!! Learning to send HELPS you learn to receive! Get a decent straight key and oscillator and spend about 10-20% of each practice session learning to send.

>The objective is to learn the sounds thru practice. One day, you will reach the point where you automatically hear the letters/words without having to "think" about it. It becomes like a second language.

Precisely. Although it's not a "language" in the sense that French or English is, once you get the skills developed you find yourself understanding Morse directly.

OK, and so what? It's certainly not important enough to be criticizing a fellow
amateur radio operator over such a technicality. And by the way - I still use
"handle" for "name" sometimes. I learned that on the amateur radio bands,
BEFORE 11-meters was converted from an amateur radio band into a CB band. What
amateur radio does NOT need are stuffed-shirts and know-it-alls who go around
correcting new hams and old timers over matters that they don't know the
history on, and matters that don't really matter. 73, AK

"Pay-to-Pay" (e-file) is not the smart way.
If only IRS were really a "service" ! AK

Don't you mean "feasible" instead of "possible"? Can you run SS? All modes
are possible including some that are used by three hams worldwide. :-)

Wrong again, Lenny. Tsk tsk, you'll never get it right. They're
required to *review* the rules every two years, not "restructure" the
rules every two years. You think maybe they're gonna put themselves
thru dealing with a "restructuring" NPRM every two years? They
streamlined the ham regs in a number of respects well beyond just the
code test thing simply to reduce their administrative expenses,
period. And the current set of rules will remain in place for some
number of years per their usual practice. Some bureaucrat will flip
thru the ham regs every two years and say "Ayup, reviewed, next?"
>
Now go find another vent for your drivel Lenny, the code test thing is
worn out, dead and buried. Better luck with your next jihad.

I disagree on this one narrow point- the whole point of amateur radio communications, or most of it, is to discuss the mode and means of communicating!

You've done everyone a favor. You asked a question and gave those who were interested in a pleasant, useful interchange the opportunity to have one. You also opened the door for those who were interested in something else to have just what they were looking for.

oh? more than one you say?
care to cite the source?
c'mon Roger, this is an old game you're playing and all the tricks are well known.

So far as I know, I received 1 letter on account of a single complaint and it
turned out that
I was not in violation at all (receiver equipment had a defective filter). so, the
complaint
was dismissed... this was in 1993.

Other than that, no other complaints OF ANY SORT were filed against me
(that I know of). I was involved in a case where a bootlegger used my
call on numerous occasions on the VHF and HF bands in an attempt to harass
me or otherwise generate harassment by inciting others to write the FCC.
He was eventually caught (the FCC V. Timothy Harold Hoffman <or also
known as "The phoenix jammers case">).

so, I have 1 complaint of record that was dismissed and listed as
satisfied... can you say that, roger?

Forgive me, revered licensed person. I was unaware that amateur
radio physics was different than the physics of radio in every other
radio service. [perhaps that difference is taught at UCI? if so, it is
worthy to take such courses to see this major breakthrough in
physics?]

Forgive me again, most esteemed qualified licensee, but the FCC still does not require staff or commissioners to be licensed in amateur radio service in order to regulate it. Further, I see nothing in the entire body of Title 47 that prohibits citizens from commenting to the FCC in regard to radio regulations of any radio service.

Feel free to correct me (I no longer read the Federal Register cover to cover) on radio regulation changes that prohibit US citizens from open, public comment. On anything.

>If it is only a seeming intolerance and not a real one, there really
>isn't any issue.

Sorry, your Lofty Highness, it is very much an issue.

Witness your own intolerant remarks as a bona fide PCTA.

>Why should the policy arguments against amateur regulation changes
>stop? The policy arguments for amateur regulation change haven't
>stopped.

...nor should they.

Heil has a perfect right as a citizen to voice his grievances, a

guarantee of our First Amendment. Heil's only problem is that
he cannot confine his arguments to the subject but must
personalize his comments to others based on Heil's opinions
of those who do not "measure up" to his lofty standards.

All of radio has evolved over the decades...with a considerable
amount of mental foot-dragging by certain amateurs who wish
to have everything remain the same as when they were
qualified. If Heil had to qualify his amateur standing by taking
a code test, then all newcomers must take such a code test.
He has Spoken.

In article <3AC55E93.55470803@ovis.net>, Dave Heil <k8mn@ovis.net> writes:

>Gee Len, you're an old fart but not a radio amateur.

True...I've been a radio professional too long.

>Please don't lump
>those of us who have been licensed hams for decades in with the old
>farts of the general population.

Flatulence is easily detectable in opinions.

>The major failure in fact of your
>latest musing would be that the amateur community at large is mostly
>amateurs who have been around for decades.

There is no "musing" about Heil being a PCTA, a mental old fart,
an amateur conservative who opposes change.

>Your *desire* as a non-radio amateur has little to do with anything.

It is not just my desire, but rather a large group of others who have been held back by the flatulent, conservative long-timers' insistence on keeping the status quo.

Unless there has been some major revolutionary changes in the US Constitution, ordinary citizens can and have commented to their government in regards to ALL laws, regulations, and rules.

Heil's "desires" seems to be that of trying to act as a sort of spokesperson for all of amateur radio. In reality, Heil is merely one voice of a US citizen, but one who wishes to appear as a "leader" of the amateur community's lodge hall.

>I *desire* many things that
>I'll never achieve unless I apply myself toward obtaining them.

How does that moral-ethical viewpoint of acceptance of status quo make Heil "superior" to all others? A fact of jumping through hoops established by chronologic very-long timers is only evidence of having jumped through hoops.

>Those
>who might want to get into amateur radio might have to meet the
>requirements rather than bleating about the inequity of it all.

Those who have jumped through old hoops are fully expected to demand that all newcomers do the very same thing...to "measure up" to their exhaulted, "superior" accomplishmentss. The problem is that the FCC regulates US amateur radio, not some wanna-be ex-officio "leaders" in the group of already-licensed amateurs. Up until the FCC relinquishes their regulation of amateur radio ordinary citizens of the US can freely comment to the FCC whether or not the ex-officio "leaders" think they are "qualified" or not.

The FCC has stated publicly that it does not consider a morse code license test relevant to their task of regulating amateur radio in 1990 and in 1999. [they are required retain that test by ITU-R S25.5] Does Heil think the FCC is "not qualified" to regulate US amateur radio?

>that the Army is teaching that anymore, either.

The sinking of the Titanic happened 89 years ago. Radio as a
communications tool was only 16 in 1912. In 1912 radios on
board ships consisted mainly of spark transmitters with crystal
set receivers. With such "radio equipment" the only feasible,
practical mode of communications was on-off keying.

Field communications in the US Army prior to 1912 consisted
of manual semaphore flags during the day and torches at night.
The torch and flags remain as the collar insignia of the Signal
Corps today...in memoriam since those modes were long since
dropped as doctrine in the field.

The US Army still teaches morse code at Fort Huachuca, AZ,
but as part of military intelligence operations training, NOT as
a communications method. MI techniques are taught to all
US military branch and government personnel at Fort
Huachuca.

The worldwide standard for maritime emergency communications
is now GMDSS...approved by the same international body that
still maintains international morse code testing for radio amateurs,
the ITU.

Every generation has its share of middle-aged critics who insist that "things were better in 'my' day...and can 'prove' it."   :-)

Their 'proof' is predicated only on personal achievement and the irritation against those who will not worship their accomplishments as Strong and Mighty. It is seen in here on a regular basis.   :-)

> "This seeming intolerance?" Boy, I must have missed something in
>what I wrote.

All of these public postings are not necessarily to the individual quoted. Do not get upset or "personalize" someone else's replies.

It is demonstrateable fact that PCTAs in here are intolerant to those who are against morse code testing for an amateur radio license. Some are downright aggressively hostile and (nearly always) attempt misdirection of the subject through personal insults against NCTAs any which way they can.   QED.

>rules every two years.

Pepper pot word useage correction noted.

>You think maybe they're gonna put themselves
>thru dealing with a "restructuring" NPRM every two years?

Such is a continual, evolving process in all radio services at the FCC. Some radio services have already been restructured while others have been simply modified. At least three other radio services are presently awaiting comment on current NPRMs.

>They
>streamlined the ham regs in a number of respects well beyond just the
>code test thing simply to reduce their administrative expenses,
>period.

No, not just for "administrative expenses." The US amateur radio license class system had grown into the most complex class-

distinction system in the international amateur world. Six classes
were brought down to three.

The "reduction of administrative expenses" had already been
accomplished by the privatization of ALL operator license testing
well before the mandate of biennial reviews.

>And the current set of rules will remain in place for some
>number of years per their usual practice. Some bureaucrat will flip
>thru the ham regs every two years and say "Ayup, reviewed, next?"

Kelly has missed a rather thorough set of reasons for change given
in 99-412, the R&O doing a large change in Part 97. The stage was
set for much of that in the 90-55 R&O that created the no-code-test
Technician class.

Since there have been over 2500 Comments on the 98-143 NPRM
(visible to the public), the FCC did not do some cavalier, flip
dismissal of reasons for change and noting all the pros and cons
expressed by citizens.

You may not like the changes or comments, but that is not any
valid reason for such a simple dismissal of the FCC's actions.

>Now go find another vent for your drivel Lenny, the code test thing is
>worn out, dead and buried. Better luck with your next jihad.

There has been no burial, no services for the dead in regards to
the "code test thing." It exists, it will be brought up by some
adminstration at WRC-2003 and, hopefully, placed into the ITU-R
WRC agenda in 2002 by a Working Group.

Kelly seems to think I speak ill of the dead. I do not. I do not
see it, "the code test thing," as something that should be
worshipped ad infinitum and forced upon all newcomers to
amateur radio.

I am all or nothing person, Dick. Like or not, doesn't change the way I am. My point is this: CW is *not* the only life-saving method available to "we" hams. If "we" are going to use the argument that "we" need CW to save lives--and use it also as an excuse to sit on a high horse as "we" delude ourselves by thinking "we" are degrading and humiliating those who choose not to like the mode and choose not learn it to whatever extent "we" think they should, then "we" should also set the example and be proficient at every single mode there is to ham radio--each of which has the same lifesaving potential.

If "we" just simply want to sit on a high horse and think "we" are better because we know something that others don't, or that "we" learned something others did/have not--then quit raising CW to some level of sainthood because of its capabilities while "we" ignore the potential for other modes.

To answer your question: Yes, if being prepared to you means that I must be proficient at every possible option to save someone's life. If it does not mean that to you, then you are rather weak in your argument that CW should be revered and respected because of its potential to save lives--because you don't have the same regard that every mode that can save lives should be learned and tested in order to be licensed.

In other words, Dick, your attempt to laud the worthwhileness of CW so that your arrogance of knowing it can be waved over all our heads is pretty damned weak.

Hey Dick,

Please show us on a year-by-year (or decade by decade)
basis the number of lives saved by CW. Me thinks it is a
slippery slope in your wishful thinking.

But who, what and where have they been over the last 40 years.
Please refer to request for quantitative data above.

Cheers,

My recollection of the data discussed on one of the history
programs was that less than a dozen of those in the water
were saved.  They froze to death very quickly...minutes.

That's true, but the reality of historical data doesn't support
the idea that there is even an occasional such situation.
The reality for US hams would be that we'd be more likly
to save another life if we had VHF and/or cell phone
available.

>communications is it's PRIMARY validating factor in Part 97.

Even if that's true (it isn't by the way, it is but one of several
reasons for the ARS as stated in Part 97.1), the use of CW
in ALL emergency comms has ended. I have yet to see one
example of where CW use is still being integrated into any
emergency preparedness effort by any recognized public
or amateur group.

>>Why not include a "proficiency test" at amateur radio bands above
>>HF?
>
>   Why not get a license?

Why not answer the question? It goes to the hypocracy
of having code testing for HF but not VHF when most all
safety/emergency comms are actually done via VHF as opposed to HF.

And since then, what?  Indeed, other than that example,
what have you to show?

> Yes, I know that isn't "ham radio".  You are reminded that in a
>lifesaving situation that distinction is moot.

More to the point is that by it NOT being amateur radio it
has ZERO impact on the need or requirement for amateurs
to know code.  After 500Khz ended, did you or any other
ham continue monitoring 500Khz knowing that the
shore stations had ceased to do so?

Cheers,
Bill K2UNK

Know what, Zoran; I give up.

There are people who are thoughtless drones, no matter how hard you hit
them with a hammer. Charles is one of them. He doesn't care about usenet
and he doesn't care about other people's interest in this fabulous
medium. He sees it as the perfect place to run his adv^H^H^HSPAM and

think that it's just great.

He behaves like the simplex idiot who is too stupid to grasp the concept of split operating. In that vein he is unable to grasp the concept of a text based, ad-free and multicultural environment that has been designed to discuss ideas, not to promote ridiculously bad designed and contentless webpages. He laughs at people who think that his fullquotes, referenceless drivels are a waste of conceptual bandwidth.

Let him have it his way. Let him be happy in his dysfunctional way of not understanding what 2-way communication at its best can be. Let's leave him alone and pray for www.usenet2.org where mindless people like him will never have a place.

You are a thick skulled little shit aren't you? Because you are so thick skulled,
there is
no room for your frontal lobes and you are most definitely lissencephalic. I will
excuse this, as it
can be blamed on the accident of your birth. However, I can not excuse you
from the idiocy of posting to alt.2600.

You need to expand your vocabulary to include words like "Mister" when you refer
to Steve Gielda, and "fuckwit" when you refer to yourself.

> Please refer to request for quantitative data above.

It's obvious that CW has saved many lives in the past and will save countless more in the future. While not precisely quantitave, an example calculation will show this important property of the mode.

Assume that 1,000 immigrant women were rescued from the Titanic's sinking in 1912. They arrive in America, marry and give birth to ten children each. That's an additional 10,000 lives saved by that one emergency CW contact over the next 7.5 years. Assume that each of the 10,000 children grows to maturity over the next 30 years and sires or births 10 children of their own. By the beginning of WWII, that one CW QSO will have saved 111,000 lives. By 1970 that number will have increased to 1,111,000 lives. And by 2001 (now), it stands at 11,111,000. By the close of the 21st century, it will be 11,111,111,000. That is to say that every third person on the face of the Earth will have been saved by the CQD sent from RMS Titanic in 1912!

Ain't that wonderful? Mr. Turd "knows a word". He must be taking a
class or something on so-called "smooth brain disorder."

I wonder if they taught him the difference between magnetic resonance
imaging and proton magnetic resonance? Longitudinal and transverse
relaxation times? Electron spin resonance and nuclear magnetic
resonance? Nawwwww.

Technicians are never really taught physics. They just think they know something.

With the same filtering I use (well I use the ssb filter instead of the cw filter) I can work ANY station I can catch on phone. AS simply as that. I know you old timers are having problems with your ears that late in the game, but us "newbies" (does a decade and a half count as new, well it does next to the half century most you have been operating but get real) have a decent set, and far better equipment than what you were at my age.

> Not you.

Naah my work is in vlbasqmtri ... but that's probably above your head.

> I see. All of the old philosophers and mathmaticians wouldn't have
> been able to do what they did if they hadn't had undergrad degrees in

Ottawa U is not podunk hollow. Where is your sheep skin from?

> Yeah, because you people don't know how to make any money with
> technology. Which is why the engineering disciplines came into
> existence. Which in turn is why it's gonna be a helluva long time
> before you'll find a physicist running General Motors.

John F. "Jack" Smith, Jr., became chairman of the General Motors board of directors in January 1996.

As chairman, Smith is responsible for building strong relationships with GM' s various business partners, unions, dealers and governments around the world. He also works with external business groups and is a liaison between the board and GM management.

Smith also served as chief executive officer from November 1992 to June 2000.

He was president from April 1992 to October 1998, and president and chief operating officer from April 1992 to November 1992.

From Aug. 1, 1990, to April 6, 1992, Smith served as vice chairman with responsibility for international operations. He previously had been executive vice president in charge of GM's international operations since June 1988.

Smith was born April 6, 1938, in Worcester, Mass. He received his bachelor's degree in business administration from the University of Massachusetts in 1960, and a master's degree in business administration from Boston University in 1965.

Smith joined General Motors in 1961 at the Fisher Body plant in Framingham, Mass. He transferred to the New York financial staff in 1966 and was named an assistant treasurer in September 1974. In February 1976, he was named an assistant comptroller on the financial staff in Detroit.

On Aug. 1, 1980, he was named comptroller. He became director of worldwide product planning in Detroit on Feb. 1, 1982. He was appointed president and general manager of General Motors of Canada Ltd. and a GM vice president on Jan. 9, 1984. On Feb. 1, 1986, Smith was named executive vice president of GM Europe-Passenger Cars, in charge of operations and engineering, and was appointed president of GM Europe on April 1, 1987.

Smith is a member of the Procter & Gamble Co. board of directors, chairman of the Economic Club of Detroit and chairman of Catalyst. He is a director of Detroit Renaissance and the U.S.-Japan Business Council. He also serves on the board of trustees of the United Way of Southeastern Michigan.

Smith is a member of the American Society of Corporate Executives and The Nature Conservancy board of directors. He is president of the Beta Gamma Sigma's Director's Table, a member of the Chancellor's Executive Committee of the University of Massachusetts, and a member of the board of trustees at Boston University. He has been awarded honorary doctoral degrees from those universities as well as Providence College, Michigan State University, Kettering University and Holy Cross College.

he is such an engineer

> I worked a VK at 1am local on 28.017 this morning. The band was wide

Well of course the technology plays a role in the interest, but quite
frankly if I tap it out a message, say it on am, fm or ssb it makes no
difference at all. Besides I enjoy the personal touch of a voice that you
dont get with cw

By your logic requiring anything of anyone makes no sense.

Certain requirements are necessary but lots of things can be left
to the discretion of the individual citizen. Choice of ice cream
and choice of modes in amateur radio are a couple of those things.

I thought the whole point of amateur radio was to experiment with
antennas.

Why indeed? I certainly would use the best method of communicatioins available in an emergency, as anyone would. The operative word here is "available".

You know, you don't always have the luxury of choosing the mode that will be used. What if you're on a SSB emergency net following a disaster and someone calls in on the net using CW with emergency traffic? Should he just go soak his head because he doesn't have some better mode available?

By the way- you may have passed a CW test somewhere at some time, but clearly you're not a CW operator. No CW operator would speak of "tapping away at a key". No one but a rank novice would think of sending code that way.

Robert:

Boycotting Kenwood because they're making a desperate attempt to preserve their sliver of a dying amateur radio equipment market is stupid and a waste of time. If I worked for them, I'd probably say the same things they did about the Morse code. Even as an avid pro-code testing advocate, I'm not going to condemn Kenwood for this. I am, however, going to condemn the FCC for taking their arguments seriously, not seeing through their business agenda, and not making the decision based on what is best for the ARS.

If you want to start a movement to do something about the code testing issue, I suggest you urge concerned radio amateurs to write to their Congressional representatives, making a strong argument in favor of retaining the pre-2000 standard in code testing, and insisting that they do anything in their power to restore our licensing standards. After all, the United States is a free, sovereign nation -- and even if the ITU Treaty code testing requirement is removed, we can still do exactly what we want from a standpoint of code testing. All we need is a government with a backbone.

Kenwood's piddling piece of the action in HF ham gear sales is not the issue. Anyway, they're offering the incentive of a free Heil Goldline microphone with every HF rig sold, so the no-coders will be flocking to the local candy stores to buy 'em. Don't worry about Kenwood. They're small potatoes. BTW -- you'll notice that their HF rigs usually have great CW features. If they're so anti-code, you'd think they would delete the CW mode from their rigs.

Actually, I was referring to the fact that you have a brain like a rat: smooth and with no frontal lobes. I was not referring to it as a disease, but that it was an evolutionary difference between you and myself. Your branch of the tree went off in a somewhat different direction to mine so to speak. Mine went the way of superior brain capacity, and yours the direction of the honey badger.

That is the first thing you have EVER written that has a modicum of accuracy, the answer is no. However, you don't need that kind of specialized knowledge to determine lissencephally and basic brain morphology. You need only discriminate between Pavlovian behavior and higher order cognition.
>
> Technicians are never really taught physics. They just think they know
> something.

So are you implying that you actually KNOW these things, or did you just look them up on "whatis.com"? If the latter is the case just take the magnet

and shove it up your ass, if the former is the case I applaud your insight into
the differences in depth of knowledge between technician vs. physicist,
but what is your point? Ahh, you might as well just shove the magnet and
the coil up your ass anyway.

No, Cecil, there were not enough lifeboats on the Titanic for the
others.

> Why do you think the people in the
> lifeboats would not have been saved without CW?

????Where you been? Without CW on radio there could have been no communications with other ships, so none could have been summoned to pick up the shivering survivors. One DID come when called, and effected a rescue before -most- of the surivors on the lifeboats froze to death. The others, in the water, were not so furtunate.
(This was way up north where it is cold even in July. When I sailed that route I came out on deck on July 4th to find an inch of ice covering everything).

Yes- if better procedures had been in place, the radio op on the ship that was within sight would not have turned off his radio and gone to bed not long before the SOS was sent, and probably all would have been saved. That isn't the fault of CW.

>   Why indeed? I certainly would use the best method of communicatioins

> available in an emergency, as anyone would. The operative word here is "available".

I would imagine calling on a cell where ya don';t have to deal with elmers or yutz who key a steady tone to disrupt comms to be far better than tapping a key

> You know, you don't always have the luxury of choosing the mode that will be used. What if you're on a SSB emergency net following a disaster and someone calls in on the net using CW with emergency traffic? Should he just go soak his head because he doesn't have some better mode available?

If thats all he has i see no problem... but get real ... name a rig that was built in the last 20 years that would still be in use today that didnt have ssb.

>
> By the way- you may have passed a CW test somewhere at some time, but clearly you're not a CW operator. No CW operator would speak of "tapping away at a key". No one but a rank novice would think of sending code that way.

I use a straight key ... what else would i call it?

So CW is responsible for food shortages, homelessness and overpopulation?
Someone quick! send a CW message to those damn immigrant women telling them
to close their legs and quit having 10 children each!

The entire time you've posted to RRAP you have been consistant in insisting
that technology can do anything, anywhere, anytime. And just as
consistant in doing nothing whatever to prove it.

Oh no.  When a tornado rips through here and starts fires, I want Zimbabwe
to know about it and send a fire truck.  Perhaps Mozambique could send a
paramedic or two, Argentina can make sandwiches and Algeria can provide
traffic control...and we have to tell them all in CW...

Our 'local' multi-county Skywarn, OEM, NWS and ESDA have 2M, 440 and 220
rigs set up. Not a single HF rig...Not one key....No antenna for HF...
This includes 13 counties that I know of and work with. Wow. Since I'm only
a nocode tech I guess I shouldn't be helping save any lives because I don't
know CW...Guess I should just 'resign' my "position" (voluntary positions
that they are) as assistant Skywarn coordinator. I'll also let our nocode
coordinator know and we can go back to where we were when NOT ONE CW tested
"ham" would take the responsibility. Like back in 1990 when a F5 tornado
took 120 lives over a period of an hour and NONE of the 4000 trained
spotters (many of which were "lifesaving, CW" tested hams) bothered to make
a report to the NWS and when those same "lifesaving, CW tested hams"
couldn't be bothered to operate a Skywarn net. I guess they were all busy
using CW to save someone in Eastern Kookamunga and didn't notice the F5.

My, My. Kim, I take no satisfaction, and in fact it saddens me, but I
must say that you are a prime example of what it is that ham radio has
degenerated into. You clearly can't understand even what it is that we
are discussing here.
But don't feel lonesome and blue- you have LOTS of good company, one of
which is named Cecil.

Hey rob! Get real, will ya? If you have a working cellphone by all
means use it and leave the key "untapped".

Ah, I see the problem. You just don't have enough knowledge and
experience to understand that conditions on HF can make SSB (and other
modes) useless when CW can still be used effectively. Sorta like what
has happened last couple days following the solar flares. Guess that
comes from your knowledge all being from books and experience all being
a "telecommunications technician" which would pretty well be shorthand
for circuitboard changer and software installer in a plug-n-play world.

Well, if you "tap out code" it can't be very well formed code. You
might want to check into the recommended way of handling a straight key.
It would also tire you out very quickly. You don't "tap" the key.

>Please do not include personal experience data from the purchasing >department at Antec.

First of all, I don't work at Antec. Don't let the domain name of the work "address" fool you. It's a large complex.

Ooops...guess you didn't find that out while doing your snooping, did you?

And the facts are from the American Medical Association...unless you'd care to dispute them, too...???

>Amateur radio is NOT a Public Safety radio service.

Please cite the paragraph where I said it was. Failure to do so is to validate the fact that you are again LYING.

>>No, it's not, but it's ability to provide a level of emergency >>communications is it's PRIMARY validating factor in Part 97. I know >>you know this, and ignore it, but it's there. It's law. It's in writing. It's >>the hole in your sinking rants.

>The only "hole" is there, not here. Amateur radio is NOT a
>Public Safety radio service.

Please (civily) disprove the statments made.

It is a FACT of federal law that Amateur Radio exists IN PART due to it's emergency communications capabilites. Please refer (again) to the VERY FIRST PARAGRAPH of 47CFR Part 97, Basis and Purpose of the Amatuer Radio Service.

No one, least of all me, has stated that Amateur Radio is a "public safety" service. This is a misdirection that you are again trying to perpetuate.

>Why should anyone want to emulate Robeson?

Or the 600,000+ other American citizens that have obtained a license? Including pre-K children, the deaf, the blind, the aged and...Oh, what's the use...???

They did it...you CAN'T.

>Of course, as usual, Robeson ends these messages with the
>Robeson-required personal insult:

>>Several days of absence have not wisened you up. Same Creep.

And same lack of ability on your part to deny it. Same creep.

Yep, that's pretty well standard for local EC groups. Works out pretty well, too
as long as you have no need for longer distance comms.

Wow. Since I'm only
> a nocode tech I guess I shouldn't be helping save any lives because I don't
> know CW...Guess I should just 'resign' my "position" (voluntary positions

And who suggested anything like that? The idea is to inform you that
there is a whold world of communications out there that you clearly know
nothing of.

And when that same body repeals the legally binding treaty that the US is signatory to, you can revisit your stale and threadbare rants, Lennie.

Of course, it will be too late....Amateur Radio will somehow have mangaged to move on without you.....Again.

Monster Sunspot Hurls Solar Flares Toward Earth

News/Current Events News
Source: Reuters via DailyNews.Yahoo.com

Published: 04/01/2001 Author: Reuters, Deborah Zabarenko
Posted on 04/01/2001 07:58:02 PDT by GeekDejure

WASHINGTON (Reuters) - Four solar flares and a pair of powerful magnetic gas clouds spawned in a monster sunspot were headed for Earth and could affect power systems, satellites and some radio transmissions, a top space weather forecaster said.

They might also provide a dazzling display of the northern lights if they arrived at night, said Gary Heckman, senior forecaster for the U.S. Space Environment Center in Boulder, Colorado.

``They're headed our way,'' Heckman said in a telephone interview. ``But these still aren't the barnburner events. ... It will tickle some power systems. Satellite operators will notice.''

The solar flares -- explosions in the sun's atmosphere -- and the fast-moving magnetic gas clouds, known as coronal mass ejections, were hurled at Earth from the biggest sunspot scientists have seen in the past decade. The sunspot was about 86,800 miles in diameter and had about 13 times the surface area of the Earth, according to the National Science Foundation (NSF) and the U.S. Geological Survey (USGS). The spot is so big it can be seen unaided as long as filters are used to protect the eyes from damage, the NSF said in a statement.

Sunspots are dark patches on the sun's surface caused by a concentration of distorted magnetic fields. Violent solar activity is believed to be caused by the release of magnetic energy. The first bit of stormy solar weather left the sun on Wednesday, and the first effects of it were expected to reach Earth late on Friday and continue through the weekend, Heckman said.

The USGS, which monitors solar weather at a network of magnetic observatories around the world, said Earth's geomagnetic field ``is expected to become quite disturbed'' by this solar activity. ``While geomagnetic storms give rise to the beautiful northern lights, they can also pose a serious threat for commercial and military satellite operators, power companies, astronauts, and they can even shorten the life of oil pipelines in Alaska by increasing pipeline corrosion,'' a USGS statement said.

Heckman said it takes about two days from the time the sun fires off flares or throws out a coronal mass ejection until its effects can be felt on Earth, when a hot ionized gas of charged solar particles hits the Earth's magnetic field, causing fluctuations in it. The big sunspot has another week to go before it rotates away from Earth, but that could be plenty of time to cause mischief, Heckman said.

``The monster sunspot's still there,'' he said on Friday afternoon. ``That region (of the sun) has been storing energy for more than 24 hours. It's just building it up, so when it's released, there is the potential for a really large event there. ... It's rather ominous just sitting there for the last 24 hours.''

An image of Thursday's coronal mass ejections can be seen online at http://www.spaceweather.com

>Subject: Re: Restructuring -- did it make a difference

>From: lenover21@aol.com (Len Over 21)
>Date: 3/31/01 1:52 PM Central Daylight Time

>>Gee Len, you're an old fart but not a radio amateur.

>True...I've been a radio professional too long.

Maybe you should try a career you are GOOD at next time...???

>>Your *desire* as a non-radio amateur has little to do with anything.

>It is not just my desire, but rather a large group of others who
>have been held back by the flatulent, conservative long-timers'
>insistence on keeping the status quo.

Obviously a too-ignorant "group" since it's been possible to be a licensed Amateur Radio operator for over a decade now.

>>I *desire* many things that
>>I'll never achieve unless I apply myself toward obtaining them.

>How does that moral-ethical viewpoint of acceptance of status
>quo make Heil "superior" to all others?

He didn't say he was (superior). You did. And I agree.

>A fact of jumping
>through hoops established by chronologic very-long timers is
>only evidence of having jumped through hoops.

You mean those unlicensed, non-code tested Commissioners that you often refer to, Lennie? Seems to me none of the current Commisioners, by law the guardians of radio law, are past mid-40-something, although I admittedly haven't done a "bio" on any of them.

If you mean Licensed Amateur Radio Operators, it further occurs to me that YOU have stated that it is the COMMISSIONERS who promulgate and enforce radio regulations, NOT Amaterus.

So which spin is it THIS time, Lennie?

>Those who have jumped through old hoops are fully expected to
>demand that all newcomers do the very same thing...to "measure
>up" to their exhaulted, "superior" accomplishmentss.

Is "accomplishmentss" MORE superior than just "accomplished"..???

And which "old hoops" do you refer to?

The tests of the 40's? The "new" Novice and/or Technician of the 50's? How about the "Incentive" licenses of the 60's? Maybe you mean the "old" hoops of "Novice Enhancement" of the 80's? Or perhaps you meant the "old hoops" of the codeless Technician of the 90's?

Which one of the myriad of license changes, testing formats, or other regulatory upheavals of the last 30 years that I have been witness to do you refer to as "old hoops", Oh Licenseless One...???

>The problem is that the FCC regulates US amateur radio, not some
>wanna-be ex-officio "leaders" in the group of already-licensed
>amateurs.

Then you agree that it is NOT Amateur Radio operators who perpetuate that which YOU refer to as a "hazing ritual"..???

Or are you trying your own "cake and have it to" experiment, Lennie?

>Up until the FCC relinquishes their regulation of
>amateur radio ordinary citizens of the US can freely comment
>to the FCC whether or not the ex-officio "leaders" think they
>are "qualified" or not.

Then comment to THEM about it, Lennie. Anything in here is just ranting and bullying on your part...Pure and simple.

>The FCC has stated publicly that it does not consider a morse
>code license test relevant to their task of regulating amateur
>radio in 1990 and in 1999. [they are required retain that test by
>ITU-R S25.5]

And in THIS paragraph you contradict other assertions you have made relative to the FCC's stance on Morse code testing and the binding treaty of which THEY cite as reason for retention of the code exam at this time.

Furthermore, it completely sinks your OWN rants about how members of the Amateur Radio community are somehow holding the FCC's feet to the fire vis-a-vis code testing. Now you state it's ITU. But only two weeks ago you went toe-to-toe with Phil Kane over international radio law...guess you MIGHT still be stinging from that little slap-happy session...?!?!

>Does Heil think the FCC is "not qualified" to regulate US amateur >radio?

Regardless of what the FCC mayor may not be "qualified" to do or say, it's pretty evident that YOU are not qualified to address the topic with an INFORMED opinion.

DAMN you make this easy, Lennie! Thanks!

Lennie the Liceneless, aka Lennie the Liar, aka Lennie the Limp once again dips
his poison pen into the well to come up with this:

>Heil has a perfect right as a citizen to voice his grievances, a
>guarantee of our First Amendment.  Heil's only problem is that
>he cannot confine his arguments to the subject but must
>personalize his comments to others based on Heil's opinions
>of those who do not "measure up" to his lofty standards

    Like YOUR numerous analogies to Nazism?  That's a hoot, Lennie.  A real
belly buster.

Jim have you read Richard P. Feynman's *minority* report on the Space
Shuttle "Challenger" Disaster? Riveting reading, chilling, to say the
least, and an excellent example of what bureacracy teaming up with
defective technical work can cause. It is really astounding, much more
is involved than only the rubber
O rings. One HOPES at least some of the awful problems permeating NASA
have been resolved. It's difficult to imagine anyone willingly boarding
a shuttle otherwise.

As you may already know, Feynman was the lone scientist on the panel of
heavyweights which investigated the disaster, and he wrote his report
detailing exactly how it happened, with a very clear discription of all
the events and problems that lead to it. The rest of the panel wanted to
suppress it, and after a bitter fight it was finally included - in the
appendix! If you read the report but not the appendix you would miss it
entirely! Clearly the truth would NOT have been made known.
If not for Feynman we probably would have never known what caused
Challenger to explode. We owe him a debt of graditude.
If you want I could scan my copy and send it to you as a ten page .pdf
file.

Dick

WEll I am sure if you wanted toi use 160-80m that would be the case ... but
I have never had the problem with 40-10 (heck even 6 is fairly nice)

Yep. The other ship that was *in sight* of Titanic had personnel who saw Titanic's flares go up but they didn't know what they meant, and they made the wrong assumptions, then sailed away...

Dwight Stewart wrote:

> I was referring to the world outside of ham radio, not the silly no-code debate.

I certainly agree, this is and always has been a silly debate. The very idea that people why profess to want to be ham radio operators would be so upset by a simple code test is pretty assinine. *ESPECIALLY* a very basic, 5wpm test.

news:3ac6e5f4$1_1@spamkiller.newsfeeds.com...

> April 1, 2001 -(AP)
> FCC Chairman wants to eliminate Morse Code and wasted spectrum by Hams.
>

> In a speech Saturday night to the telecommunications industry FCC Chairman Michael Powell spoke out against the use of Morse Code and the waste of valuable spectrum by ham radio operators, ham radio operators are licensed CB operators that pass a Morse Code test. The Chairman is concerned about the waste of spectrum worth billions of dollars to the telecommunications industry that is currently being used by Ham Radio operators.
>
> The Chairman also wants a big change in the spectrum wasted in the Ultra High Frequency area of spectrum in which Ham Radio Operators hold a staggering sixty megahertz of spectrum, more then any other radio service.
>
> "Amateur Radio operators in this frequency band only need about two megahertz to chat with each other about the weather. Cellular and portable communications are in great demand and the FCC should not allow a few thousand people to hog spectrum needed by millions of consumers."
>
> In a detailed presentation he outlined his plan to ask the International Telecommunications Union for the reassignment of a four megahertz chunk of spectrum to the airline industry that is presently held by amateurs near the overcrowded civilian aircraft band. He also outlined the conversion of thirty megahertz of frequency for use by telecommunications providers for data systems that could be used to supply high-speed access to the internet via radio frequencies.
>
> To demonstrate why the FCC Chairman believes the Amateur Radio Service is wasting spectrum he played several tapes of licensed ham operators using vulgar language and jamming stations in the band he wishes to convert to the airline industry.
>
> When asked by reporters about the possible opposition to his plan by ham radio operators the Chairman smiled and exclaimed, "We are going to cut it off and kill it!"

> Ah, I see the problem. You just don't have enough knowledge and experience to understand that conditions on HF can make SSB (and other modes) useless when CW can still be used effectively. Sorta like what has happened last couple days following the solar flares. Guess that comes from your knowledge all being from books and experience all being a "telecommunications technician" which would pretty well be shorthand for circuitboard changer and software installer in a plug-n-play world.

Again ... I must add that Within the 50-60km's you may expect someone to help you out those solar flares won't bother any ssb comms... but of course ... if you want fred from timbuktu you better get that 1kw linear amp and tap right away

My knowledge in the field comes from years of experience. Both as a technician with RCMP as well as an indeendant contractor. My electronics knowledge however factors nil into this subject anyways.

> Well, if you "tap out code" it can't be very well formed code. You might want to check into the recommended way of handling a straight key. It would also tire you out very quickly. You don't "tap" the key.

The key certainly makes a tapping noise ...

Or much more likely, what if rolling (or continuous) blackouts took the
repeater off the air and there was no surviving charge in the backup
battery?

The very reason why it's important to maintain a CXW test even if no
one is required to maintain knowledge and skill. Experience has shown
that enough of those who are required to passa test keep an interest in
the mode and maintain their capability such that there remains a pool of
available operators. When testing is dropped that factor goes, too. The
complete availability of radiotelegraphy as an available mode is at
stake.

 It's noivel that you CW denyers all "tap" your key, thus illustrating
for all to see how little you actually know about how to operate CW.

First there has to be interested and Cw Qualified operators around who understand the realities of life in the ARS and in exactly how it can easily go in emergency comms. That leaves out 99.9% of the code bashers.

Then I'd go simplex on the output freq. of the repeater.  I can talk 15+
miles on the 7watt ht.  I have a 50watt mobile in the car.  I doubt it would
be a problem.  If it was, I would switch to one of the other 13 or so
repeaters in the area.  Blackouts and outages of that magnitude would
probably have ARES  and RACES activated anyway and our club, and/or one of
the others,  would have one of our generators set up at the repeater site as
well as members at the fire stations and hospitals.  In any case, I'd still
have direct comms via VHF.

Then you're not pahying attention, still. Arnie and his Emergency Comms
group used CW to pass message traffic re the hurricane from the area of
the storm to the State Capitol when conditions were too bad for SSB to
be heard and no other alternate means was at hand. You can continue to
refuse to believe in the need for this capability as long as you want
but facts are facts.

You are not paying attention, Dick. That's not what I was responding to.
I just did not believe that CW is saving more lives than CPR and asked
for clarification.

I believe there's a need for CW capability and I have that capability.
I believe there's a need for food storage and water filtration units. I
have some. I believe there's a need for solar-power/battery-backup and
I have them. I believe there's a need for wood stoves and I have two.
I believe there's a need for guns for self protection and I have some.
I believe there's a need for a GMC pickup and a Harley and I have them.
I believe there's a need to be able to buy Cinnamon Life cereal at the
grocery store.

I do not believe any of the above needs should be forced on citizens
through governmental requirements or affirmative action programs.

Another straw man ad hominem attack, Dick. CW can certainly be useful
and I am fully equipped for the mode. But it doesn't make any sense
at all to require Morse code skill and not require a CW transceiver
to go with it.

>>well before the mandate of biennial reviews.
>>

>Baloney. When was it that the FCC handed off dealing with applications
>for code test waivers under the ADA to the VE/VECs?

Don't slice your sausage before it is packed.

The FCC privatized ALL radio operator licensing, amateur and commercial, some time ago. Before the 98-143 NPRM. You are trying to misdirect the argument by going to a special case only for radio amateurs.

>>Kelly has missed a rather thorough set of reasons for change given

>>set for much of that in the 90-55 R&O that created the no-code-test
>>Technician class.
>>
>Yeah, sure. I been there as a GS-11/12 snivel servant Lenny, seen the
>real reality from the inside, you obviously have no clue again because
>like not being a ham you ain't ever been inside the gummint loop
>either.

Something new. Kelly has been a "snivel servant." :-)

Amateur radio was the "credential" for being a "snivel servant?"

On "not being inside the gummint loop" [sic: government loop]. Kelly seems to dismiss anyone else working on Department of Defense, Department of Transportation contracts. Apparently all those "snivel servants" had the "proper credentials" as licensed radio amateurs to be in their position? I don't think so.

>>You may not like the changes or comments, but that is not any
>>valid reason for such a simple dismissal of the FCC's actions.
>>
>See above about how gummint actually works. "Will the last ham radio
>"regulator" around here please turn the lights off on his way out the
>door"

Then there will be a lot of self-proclaimed "ham radio regulators" all fighting over the light switch. :-)

The FCC regulates a great number of radio services in the USA. So many that amateur radio is a small part of all those services. It's not that amateur radio is not important, it is just that all those other radio services have more to do with US citizens. Of course, by the "credibility" and "qualification" rules of Kelly and others in here, only hams can regulate hams, right? :-)

>>Kelly seems to think I speak ill of the dead. I do not. I do not
>>see it, "the code test thing," as something that should be
>>worshipped ad infinitum and forced upon all newcomers to

>>amateur radio.
>>
>Hang in with your anti-cw rants Lenny, you certainly have right to do
>that, no problem, rants in this NG seem to be your whole life which is
>fine, no skin off my teeth, your sad limitation.

You seem to take anything against CW in amateur radio very,
very personally.  So much so that you wish to deprive all
newcomers any access to HF via a no-code license?  Are you
really afraid and are trying to hide it behind bluster and
apparent indifference?  Who is the "sad" one now?

>You'll just have to
>excuse my lack interest in the code test thingey for now Lenny, take
>it somewhere else, it's dead in my book, I'm too busy beeping the
>planet to give a bleep about what you "think".

A rather nice demonstration of eliteness, of self-proclaimed
"ownership" of an avocation.  If you were so "busy" you need not
have replied at all.  :-)
```

Poor Robeson. He cannot argue a subject, he can only argue personalities.

Robeson keeps claiming he "knows what is best for US amateur radio" because he is licensed in it. Null reasoning.

The FCC regulates US amateur radio. Neither staff nor commissioners are required to possess amateur radio licenses in order to regulate US amateur radio.

By Robeson's logic, the FCC cannot possibly do its chartered task since only a few staffers have amateur radio licenses.

>>All of these public postings are not necessarily to the individual
>>quoted. Do not get upset or "personalize" someone else's replies.
>
>   And remember to do what Lennie says, NOT what Lannie does. They are
>usually NOT synonymous.

That is Robeson's poisoning of the well. My arguments in here, when there are individuals who care to argue subjects rather than personalities, are simply to eliminate the code TEST for any US amateur radio license examination.

Unfortunately, some poor souls such as Robeson, need some sort of outlet for their frustrations so they attack, fight, become aggressive, mean-spirited, loutish, and generally act the asshole by going after personalities.

>>It is demonstrateable fact that PCTAs in here are intolerant to those
>>who are against morse code testing for an amateur radio license
>
>   It is demonstrateable fact that post career electronics technicians who
>are not licensed in the radio service of which they are so critical often
>liken those who do not share THIER opinions to Nazis, "old farts" or other
equally
>distasteful adjectives.

Robeson wishes to attack credibility by challenging someone's pre-retirement working career. Let it be known that my working career was, and still is part-time, as an electronics engineer. That is verifiable by anyone wishing to contact KD6JG or W6MJN or any of the corporations who were my employers (all given in prior postings). Engineering requires responsibility and knowledge in order to continue receiving a salary. I continued to receive a salary. Yes, in the past I was working as an electronics technician...prior to 1965.

Now let's look at Robeson's working career based on his own statements in here. He insists on a personality fight, so let it become one.

At some time in the past Robeson claims USMC rank of E-7 but received a medical discharge, terminating that career. He made some vague claims of being involved in aviation electronics while in the USMC but nothing specific stated. He then became a licensed practical nurse, no doubt inspired by some love of healing the sick (we have all seen that represented in here). That second career was suddenly terminated, claiming "burn-out." A third career was begun as a purchasing agent (Antec Corporation, in Georgia) which involves living away from home during working days. All of those career choices have emphasized rank and status, according to Robeson's past postings...especially the "authorized" licensing for military and nursing.

Robeson's "authority" on amateur radio matters consists of being licensed as an Extra class radio amateur for some time, no other "authority" or "qualifications" in that regard other than some tenure in that class.

>   Then when subjected to thier own medicine, become defensive, profane and
>generally disjointed that the REST of the world can't see things with THIER
>clarity.

More well-poisoning. My arguments have tried to remain on the subject. Those "qualified" licensees such as Robeson do nothing but argue personalities, attempting to demean and defame anyone who does not see things their way. Strong arguments for one side of a subject ON the subject are not personal attacks against those who do not agree with that viewpoint. The immature will take them personally and the result is the usual flame-fest and insults.

>>Some are downright aggressively hostile and (nearly always)
>>attempt misdirection of the subject through personal insults against
>>NCTAs any which way they can.
>
>   See what I mean? And as for "misdirection", you are invited to research
>archives of "NoCWTest". It's a true "pot/kettle/black" circumstance.

AOL (one of my ISPs) allows up to seven screen names (handles). I used "NoCWTest" as a handle well over two years ago while arguing against the morse code test necessity in here. Apparently Robeson thinks that all non-amateur screen names are not suitable for the tender eyes of ex-military, ex-nurse purchasing agents who are licensed in the US amateur radio service.

>   Lennie knows his electronics to be sure. Above and beyond that, he's

>worthless.

Tsk, tsk. Robeson attempting to do more well-poisoning. :-)

>If he can't find it on a website, he has absolutely no Amateur
>Radio experience base upon which to make the frequent attacks against Amateur
>Radio that he makes in this forum.

More well-poisoning. Robeson assumes the imperial mantle of Representative of All US Amateur Radio! [the ARRL claims that, Robeson is invited to argue representation with them]

Robeson is licensed in US amateur radio. Unfortunately, he takes that as the "authority" to claim that all who are not so licensed have "NO" knowledge, experience, love, or anything else of or about amateur radio. Specious argument, used for one purpose only: The Big Lie technique of Internet PsyWar. Say it often enough and some will actually believe it as truth. Robeson has nothing else in his discussion-debate-argument arsenal except insults and exaggerations so each and every "reply" of his consists of little more than an obsessive "battle" comment on personalities.

US amateur radio is one of the most open and visibile and audible avocations, so much so that regulations forbid codes and ciphers intended to obscure communications. Amateur radio physics operate exactly the same as the physics of other radio services. Publications on the techniques of amateur radio abound, at a resonable price (relative statement compared with mainstream publishers). There is no "secrecy" involving the radio hobby other than in the twisted mentality of a few who NEED the status symbology of authority to show they are "better" than others.

This newsgroup was created to discuss the morse code test issue. Unfortunately, all too many advocating the retention of the morse code test for licensing have exaggerated that issue to mean that elimination of the code TEST is an "anti-CW battle" that the Righteous Codeites must fight.

The "battle" exists only in certain minds. No No-Code Test Advocate has ever claimed that CW must be "eliminated." NCTAs have claimed that CW mode should be given equal footing with all other allocated modes in fairness and openness. Fairness in regulations is seemingly against the PCTA eliteness and favoritism of CW. The "battle" is against the elite, not the avocation in general..

>which has precisely nothing to do with the regulatory or any other
>policy issues related to Amateur Radio. Credentials in this NG = Zip.

Now, now, Brian. Let's not get into the professional area again where you want to argue "legality" of an ENGINEER title prior to receiving a degree (most of my career).

Yes, I was an electronics technician prior to 1964. The interesting part is that industry doesn't need all the anal-retentive "qualifications" and "licensing" you insist on in order to DO THE WORK of engineering or in assuming responsibility of pass or fail of a work task. One has only to do the job, show capability, accomplish the task successfully, and be rewarded with a good salary. In radio as well as electronics. In radio at frequencies below, including, and excluding amateur bands using more modes and modulations than are allocated to amateurs.

What "credentials" or "licenses" are needed to discuss law, regulations, or rules of government? Answer: NONE in open forums or assemblies of citizens.

Kelly seems rather upset that any plain, ordinary, unlicensed-in-the-amateur-radio-service citizen DARES to comment on

amateur radio regulations! Imagine that! "No credibility" all
derived from a simple argument against retaining the morse
code test for a US amateur radio license examination!

Does the FCC require its staff or commissioners to have the
"qualifications" and "credibility" of an amateur radio license
in order to regulate US amateur radio? Answer: NO.

Does the grant of an amateur radio license permit snarly
remarks to ordinary citizens not licensed in the amateur
radio service? Apparently so judging from some of the
commentary in here.

If you wish to represent all of US amateur radio insofar as
"credibility" for comment, be advised that you already have
two ahead of you, the ARRL and the we-we person, both
claiming that. :-)

There you go shaking your "we-we" again. Use of the royal "we"
indicates Robeson represents all of US amateur radio (the ARRL
claims that, which is it).

Oddly, that "acceptance" is not universal in here. A number of
staunch and starchy PCTAs differ with that opinion. :-)

DOS Tip: The code test standard (S25.5) is NOT in the present
US adminstration agenda for WRC-03 nor is it mentioned by the
FCC International Bureau.

Say hello to all your other multiple personalities, Robeson. I don't
want to overlook any of them...

>
>   Lennie, Lennie, LENNIE! This newsgripe is Amateur Radio POLICY. NOT

>Amatuer Radio PHYSICS.

Please see Part 97, Title 47 CFR, specifically sub-part D titled "Technical Standards." That very much involves physics.

> On matters of PHYSICS we accept your qualifications.

What do you mean "we," your royal behindedness?

Robeson does not "represent" anyone but himself (the ARRL "represents" all US radio amateurs). However, schizophrenia manifesting itself as multiple personalities might just be a qualifier for using "we." :-)

>In matters of Amateur
>Radio policy and PRACTICE, you have NO experience.

Not as a licensee, true. Neither has the FCC since NO staff or commissioners are required to be radio amateurs in order to regulate US amateur radio and to set standards of amateur radio licensing. [a few staff are hams but that is not a requirement]

Robeson has claimed knowledge and experience as a military person but has not been in war. Robeson has claimed life-saving ability as a nurse yet is not authorized to be a doctor. Robeson has claimed all kinds of "knowledge" in electronics engineering by being a purchasing agent but is not tasked at Antec to be responsible for actual engineering.

US amateur radio frequency allocations extend all the way to 250 GHz (1 mm band) yet Robeson has mentioned only once that he operated on 23 cm band using a borrowed HT. There are a number of different modes optional to US radio amateurs yet Robeson has not mentioned any that are not in his store-bought radio. Tsk, tsk, not many claims to "practical experience" in US amateur radio on Robeson's side, are there?

>>Forgive me again, most esteemed qualified licensee, but the FCC
>>still does not require staff or commissioners to be licensed in
>>amateur radio service in order to regulate it.
>
> Misdirection. The discussion was on YOUR lack of credentials to make
>informed opinions on matters of Amateur Radio policy or practice.

Nonsense. Perfect direction. The "credentials" Robeson wants is a license in the amateur radio service. The FCC does not require such "credentials" for its staff or commissioners in order to regulate all of US amateur radio.

Further, the FCC will accept any comment from any citizen concerning radio regulations of any radio service without requiring "credentials" of operator licensing in any radio service.

>>Further, I see nothing
>>in the entire body of Title 47 that prohibits citizens from commenting
>>to the FCC in regard to radio regulations of any radio service.
>
>   To the Federal government when a solicitation for comment is requested.

If the task of reading all of Title 47 and/or the Communications Act
of 1934 and the Telecommunications Act of 1996 is too daunting,
I'd suggest the "FCC Handbook" to explain what the FCC will accept.

The FCC will accept any and all comments, suggestions,
communications from any citizen on any radio service regulations
or policy thereof. It is NOT limited to "solicitation for comment"
(presumably limited to NPRMs in Robeson's quaint use). The
FCC must do so. By law. Live with it.

>Your rantings in HERE amount to nothing more that intimidation and bullying.

Well-poisoning. Robeson continually jumps in obsessively on
any subject I address regarding the comment of another. THAT
is bullying. THAT is intimidation. Quod Erat Demonstrandum.

Feel free to vent whatever gripes you in another newsgroup, then.

This newsgroup was created to discuss the morse code test
issue. It has been extended to include all policy matters
concerning amateur radio.

>And the statistics (crime, kids out of wedlock,
>runaways, suicides, etc) do prove it today.

"Crime" as in unlawful radiowave emission has been discussed in
here. Bastardy has been mentioned infrequently, usually as a
pejorative against another. "Runaways" has only been touched
on by those who have "run away" from either amateur radio or
citizen's band radio. A few feel a need to have runaway opinions
of others. :-)

How are you going to run a CW transmitter during a blackout with no surviving charge on the backup battery?

Don't know about other repeaters, but our local repeater has power terminals where jumper cables can be hooked up to a vehicle. How long will a 40 gallon pickup provide power for a repeater?

So as long as there's fresh meat, you don't care if the OF's forget everything they ever knew about CW. That figgers. Now we know the true reason you want to maintain the requirement. So it can be someone else's day in the barrel.

> The complete availability of radiotelegraphy as an available
> mode is at stake.

At one time, the complete availability of a coat of mail was at stake. And times change so a coat of mail is no longer required. And progress happens (except to you).

What else can you do with a straight key except short and long taps,
Dick? My key taps every time I push down and taps again every time I
let up. I have actually dampened my Bencher so the up tap doesn't
make as much noise as the down tap.

Then we'd move to a different repeater ... or simply go to the site and
operate a mobile station

Bingo ... besides ... whoever heard of a repeater who didn't have a
generator onsite to kick in after 110 was unavailable ... after all who are
running htese repeaters ?

Why don't you clueless jokers find something to argue about? No one has ever even suggested otherwise.

>>Was anybody saved who went into the sea and not into the lifeboats?

Yes. As I recall, six people were pulled from the water by the lifeboat led by Officer Lowe. His boat was the only one that went back to rescue those in the water after the ship sank.

In addition, one of the collapsible boats was upside down, and quite a few survived by hanging on to it. Most of them had swum there but were able to get out of the water.
>
>My recollection of the data discussed on one of the history
>programs was that less than a dozen of those in the water
>were saved.

I can look up exact numbers for you when I get my copy of "A Night To Remember" on Monday.

As I recall, there were 2205 people on board Titanic on April 14. 705 were saved, the other 1500 died of various causes - mostly hypothermia. Had there been enough lifeboat space, all could have been saved.

>They froze to death very quickly...minutes.

Would that it were true. Those in the boats could hear those in the water crying out for help, and those cries lasted 20-30 minutes or longer. Dead or unconscious people don't cry out for help.

For an excellent comparison of the parallels between the Titanic and Challenger disasters, see:

http://www.cuug.ab.ca/~branderr/risk_essay/

You just triggered on of my peeves from years ago. A British show called Danger Man was imported by CBS. It had a really neat harpsichord theme that was fun. When it got to the US we got a really bad Johnny Rivers theme on a renamed Secret Agent.

Thar's a man who leads a lahfe of danger, TWANG.

I get a bang out of some of the Goon Shows syndicated by WCLV on Sunday here but firesign theatre would definitely be a coup.

Hang by your thumbs and write if you get work.

Funny thing is I can work em all on ssb ... those I can't I don't want to
seeing as how they prob don't have a ticket anyways

You are being rediculous ... what difference does it make that someone
1000km's away knows of your trouble ... locals will hear you on ssb just
fine.

Why on earth would anyone want to go through an extra person to get help?
There is NOBODY in emergency services listening to ssb. That means any
communication is going through a third party both ways. If I use my VHF ht
I can call the fire department directly (they monitor the repeaters in the
area) and talk to a qualified person directly while more help is on the way.

I can be talking directly to a paramedic while an ambulance crew is being dispatched. I know because I did it this winter at the scene of a rolled over van in Indiana just over the Illinois border. A third party would have been a pain in the butt, not to mention practically useless.

They were in the shipping lanes equipped with flares. That's how people were often rescued before radio. The situation would certainly have been worse but not necessarily hopeless.

> Yes- if better procedures had been in place, the radio op on the ship
> that was within sight would not have turned off his radio and gone to
> bed not long before the SOS was sent, and probably all would have been
> saved. That isn't the fault of CW.

If CW works, CW is the cause. If CW doesn't work, CW is not the cause.
I understand how your mind works, Dick.

I was referring to the world outside of ham radio, not the silly no-code debate. And the statistics (crime, kids out of wedlock, runaways, suicides, etc) do prove it today.

Seems to me he is somewhat ill prepared in being forced to rely on a
group of hams who may or may not remember how to copy CW.

I've been tapping away at a key for 50 years. What's wrong with live
and let live?

That just proves that they are not anti-code. They are anti-code-requirement. That's a big difference. Apparently they believe they will sell more CW/SSB transceivers if the code requirement is dropped.

Hang in with your anti-cw rants Lenny, you certainly have right to do
that, no problem, rants in this NG seem to be your whole life which is
fine, no skin off my teeth, your sad limitation. You'll just have to
excuse my lack interest in the code test thingey for now Lenny, take
it somewhere else, it's dead in my book, I'm too busy beeping the
planet to give a bleep about what you "think".

April 1, 2001 -(AP)
FCC Chairman wants to eliminate Morse Code and wasted spectrum by Hams.

In a speech Saturday night to the telecommunications industry FCC Chairman Michael Powell spoke out against the use of Morse Code and the waste of valuable spectrum by ham radio operators, ham radio operators are licensed CB operators that pass a Morse Code test. The Chairman is concerned about the waste of spectrum worth billions of dollars to the telecommunications industry that is currently being used by Ham Radio operators.

The Chairman also wants a big change in the spectrum wasted in the Ultra High Frequency area of spectrum in which Ham Radio Operators hold a staggering sixty megahertz of spectrum, more then any other radio service.

"Amateur Radio operators in this frequency band only need about two megahertz to chat with each other about the weather. Cellular and portable communications are in great demand and the FCC should not allow a few thousand people to hog spectrum needed by millions of consumers."

In a detailed presentation he outlined his plan to ask the International Telecommunications Union for the reassignment of a four megahertz chunk of spectrum to the airline industry that is presently held by amateurs near the overcrowded civilian aircraft band. He also outlined the conversion of thirty megahertz of frequency for use by telecommunications providers for data systems that could be used to supply high-speed access to the internet via radio frequencies.

To demonstrate why the FCC Chairman believes the Amateur Radio Service is wasting spectrum he played several tapes of licensed ham operators using vulgar language and jamming stations in the band he wishes to convert to the airline industry.

When asked by reporters about the possible opposition to his plan by ham radio operators the Chairman smiled and exclaimed, "We are going to cut it off and kill it!"

We had (and used) CW as a means of communication when we had to evacuate during Hurricane Floyd. Local Cell Phones were out and voice communication (HF) was nearly impossible to copy. CW was just another "tool" in the toolbox that made communications possible.

Apparently, you havent been to the Chatham County EOC lately. CW is indeed
an integral part of the ARS station there.

Since we are living in the present, at least some of use are, I was
just trying to nail down your time frame. Suits of armor have saved
a lot of lives in the past but nobody considers them serious protection
any more because times have changed.

Sure he has. Mr. Len has stated many times that he was there on the front lines of the backwater arena of the Korean Conflicts. He was a company cluck in Tokyo (that's in Japan for the no coders of this group) while real men were fighting. Len had to face the problems of the occasional inkbottle going off in his pugy pasty face. I heard the Mr Len received a purple heart for getting hit by flying shell fragments (egg shell).

Life must have been rough having to cower in those watering holes, as opposed to foxholes, there on the Ginza with all the B-ladies hanging on his every word about his exploits on HF Bwwaaahhhhhhhhh

Don't look now, Larry, but I think you're being trolled. Probably by someone
who has been lurking in this newsgroup for quite some time, and who knew that
this is the exactly the kind of response they would get from you. I have to
hand it to them. They were quite clever, and you took the bait.

Most often by post-career electronics technicians who insist they know what's best for a radio service in which they are not licensed.

>All of these public postings are not necessarily to the individual
>quoted. Do not get upset or "personalize" someone else's replies.

And remember to do what Lennie says, NOT what Lannie does. They are usually NOT synonymous.

>It is demonstrateable fact that PCTAs in here are intolerant to those
>who are against morse code testing for an amateur radio license

It is demonstrateable fact that post career electronics technicians who are not licensed in the radio service of which they are so critical often liken those who do not share THIER opinions to Nazis, "old farts" or other equally distasteful adjectives.

Then when subjected to thier own medicine, become defensive, profane and generally disjointed that the REST of the world can't see things with THIER clarity.

>Some are downright aggressively hostile and (nearly always)
>attempt misdirection of the subject through personal insults against
>NCTAs any which way they can.

See what I mean? And as for "misdirection", you are invited to research archives of "NoCWTest". It's a true "pot/kettle/black" circumstance.

Lennie knows his electronics to be sure. Above and beyond that, he's worthless. If he can't find it on a website, he has absolutely no Amateur Radio experience base upon which to make the frequent attacks against Amateur Radio that he makes in this forum.

>QED.

QED is right.

Heads up, Dwight.....Lennie is a MASTER of introducing the (otherwise defunct) morse code test subject into almost ANY post he can.

Without it, he is nothing. Well...he's nothing anyway, but it makes him happy to think he knows something.

HAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHA

As usual, Lennie get's caught in the SAME faux pas that he loves to grill ohers with, but can't stand the heat. Ergo, the claim of "misdirection".

Pot/Kettle/Black...Again, as usual.

It only "isn't" because you have nothing else to beat...so you keep beating the code issue. The rest of us have accepted that when S25 is repealled, most likely after WRC2003, that the code test in the United States will likewise disappear.

Only YOU insist on making issue of the opinions of a narrow sector of Amatuers. So beat yourself to death, Lennie. We'll send Mrs. Lennie a card.

Maybe.

Watch it Jim....Next thing he'll do is start going to California State websites and quoting your education credentials, expiration dates and other non-amatuer radio related factoids.

It's easy to do when you have NOTHING to do.

Of course in another thread posted this date he was lambasting Dwight Stewart with how "PCTA's" use personal insults and "misdirection".

I will LOVE to see Lennie the Limp's explanation of how the time of day you made this post had anything to do with ANY Amateur Radio policy.

>Forgive me, revered licensed person. I was unaware that amateur
>radio physics was different than the physics of radio in every other
>radio service.

Lennie, Lennie, LENNIE! This newsgripe is Amateur Radio POLICY. NOT Amatuer Radio PHYSICS.

On matters of PHYSICS we accept your qualifications. In matters of Amateur Radio policy and PRACTICE, you have NO experience. This by your own admission on numerous occassions.

>Forgive me again, most esteemed qualified licensee, but the FCC
>still does not require staff or commissioners to be licensed in
>amateur radio service in order to regulate it.

Misdirection. The discussion was on YOUR lack of credentials to make informed opinions on matters of Amateur Radio policy or practice.

>Further, I see nothing
>in the entire body of Title 47 that prohibits citizens from commenting
>to the FCC in regard to radio regulations of any radio service.

To the Federal government when a solicitation for comment is requested. Your rantings in HERE amount to nothing more that intimidation and bullying.

>Feel free to correct me

No problem...our pleasure. You make it soooooo easy.

>(I no longer read the Federal Register cover to cover)...(SNIP)

In as much as you have, in recent postings, demonstrated ignorance of (or perhaps "arrogance" of is a better desciption) radio regulations that pertain to COMMERCIAL applications, I doubt you ever read it at all, let alone cover to cover or in reference to Amateur Radio matters.

You're losing valuable "message points". Lennie. Better hurry and catch up!

Dear James,

I hope that you will take some time to research the tens of thousands of posts that Lennie has made in the last few years under numerous screen names (NoCWTest, Avery Fine, LenOF21, Len over 21 among others.....). Then you will find out why Amatuers on both sides of the "morse code test" issue distance themselves from Leonard H. Anderson.

I quite admittedly get up in his face at every opportunity, James, and I probably can stand to cool it...but I don't tolerate bullies well, and he IS a bully in EVERY definition of the word. He get's back that whcih he serves.

Needless to say, Lennie doesn't like having his rants skewered with facts, but that's usually what happens. He constantly trips himself up on matters of POLICY or Amateur Radio PRACTICE, and then tries to hide behind lengthy dissertations of a TECHNICAL nature.

Welcome to the NG, but don't let your guard down with Lennie. He'll slap you silly when you least expect it.

Hope to work you on the air sometime...that's what it's all about. Another fact that Lennie the Licenseless forgets. Or perhaps he just doesn't get...?!?!

73

Steve Robeson, K4YZ

> I began legally operating on HF in February, 1953.

But never as a licensed Amatuer Radio Operator.

>Some are downright hostile.

And you're not?

>Thank the Lord that there are still human beings in US amateur
>radio!

Last I checked there was no species limitations or prerequisites, Lennie. Which means even YOU could qualify for a license. But I doubt it.

>All I am advocating is the elimination of the morse code test
>for any class of amateur radio license. That sort of thing results
>in outright angry hostility by a number of pro-code-test advocates
>who insist on keeping what myself and many others call a

>"hazing ritual."

The FCC has already stated it will revisit the test after S25 is repealed. Ergo you are beating a dead horse...Or at least a dormant one until after WRC2003. They have already stated they will be glad to be done with it once the treaty no longer binds them.

The anger results from being made the butt of your lies, slurs, and insinuations.

And YOU call it a "hazing ritual" because you can't otherwise justify your position.

>The technology of radio has advanced far since I first began
>in it 49 years ago and, in the course of a career involving
>radio and electronics, I've had to keep pace with that advance.

No, not really. You are not active in any practical application of radio technology (cellphones and AOL notwithstanding).

Nor do you have a viable grasp of current legal matters pertaining to ANY sector of radio communications, witness your "expiration" of your GROL license this past October.

>As I see it, many in US amateur radio want to keep the
>avocation frozen in the standards and practices of the 1930s
>or late 1940s.

Thank you for making my point. Amatuer Radio of my "era" (1972) was nothing like the 30's or 40's. And since I am STILL licensed (and ACTIVE), it is STILL my "era", and Amateur Radio in 2001 is nothing like it was in 1972.

Ergo, you have once again spun your wheels with NO regard for the TRUTH or REALITY.

>That includes keeping amateur radio licensing
>in that same time frame, preserving morse code in a sort of
>"living museum" as if that is the main skill that any radio
>amateur should possess. To what end for a hobby?

Amateur Radio licensing in 2001 is NOTHING like 49 years ago. Or 29 years ago...or 9 years ago....

>I do thank you for your civil support. It is an agreeable
>even pleasureable sight to see someone who will not insult
>or demean someone simply because they have differing
>opinions.

Oh, don't worry....before long he will have a chance to be subjected to the same lies, insults and degradation that you inflict on EVERYONE in this NG...EXCEPT, of course, for your ANONYMOUS friends "MegHz" and "W2DNE".

>The problem is that many licensed radio people insist on

>forcing their personal hazing rituals on newcomers.

Hmmmm....First YOU insist that the FCC, not Radio Amateurs are the ones who promulgate and enforce Amateur Radio regulations.

Then you insist that AMATEURS "insist on forcing thier personal hazing rituals on newcomers."

So which is it, Lennie? Are Radio Amateurs creating this "hazing ritual" or is the FCC doing it?

Remember, the FCC Commissioners are NOT licensed Amatuers, and would have EVERYTHING to gain by waiving their hand and dismissing the code test requirement.

Yet they don't. Why? Because it is INTERNATIONAL LAW that binds thier hands, not any "hazing ritual".

>US amateur radio is not a public safety radio service nor is it
>a military radio service nor is it any kind of occupational
>radio service. It is defined as a radio activity carried on
>without pecuniary compensation, the primary reason for
>using the word "amateur."

Misdirection. Lennie ignores the very first paragraph of Part 97. No, Amateur Radio is not a "public safety" or "military" radio service, however it is a PUBLIC service. The >>FCC<< says that the Amatuer Radio service exisits, in part, due to it's unique ability to provide the capabilities that it does, and that SPECIFICALLY includes it's ability to provide emergency communications.

"Emergency communications" and "public safety" are not necessarily synonymous. Lennie ignores that, too.

>There should not be any reason to think that an "amateur"
>is demeaning...yet many amateurs will not hesitate to
>demean professionals.

Lennie, YOU are the only "professional" that gets "demeaned". NO ONE in this NG makes any effort to take ANY "professional" to task. YOU, on the otherhand, come to an Amatuer Radio NG with no license, NO practical experience in ANY facet of Amateur Radio practice, and with NO vested interest in the future of Amatuer Radio, and then insist that YOU know what's best for us based upon your "professional" career.

"Commercial" radio is NOT "Amateur" Radio. Beyond the physics of radio wave propagation itself, neither has anything to do with the other.

"An America Not Preapred For War In Peacetime Will Not Know Peace In Any Time."

>Far more "clues" here than there...except for the old-tyme
>religion that epitomizes morse code testing.

Here we go again. I made absolutely NO statement relative to Morse Code testiing....Lennie HAS to "introduce" it in order to keep his head above water.

>Hint: The FCC authorizes US amateur radio licenses. The FCC
>does not require either staff or commissioners to have amateur
>radio licenses to regulate US amateur radio.

Hint: Read your own writings, Lennie. YOU state Amateur Radio Operators enforce some undefined "hazing ritual" yet you THEN misdirect the discussion to the lack of licensure of the Commissioners.

Hard to mix those apples and oranges, isn't it, Lennie...?!?!

>Robeson "knows" nothing of the kind.

Sure I do...You've done it before..you will do it again.

>Again, Robeson "knows" nothing of the kind...but Robeson insists
>on retention of the morse code test in the license examination
>because he had to take one.

Leonard H. Anderson is blatantly lying in the face of facts to the contrary. I "insist" on the retention of the code test since it is a binding legal treaty obligation of which the United States is signatory to.

I have stated this before.

And of course, YOU have tried to skirt this truth by somehow trying to make us believe that the United States is not obligated to honor this treaty and that you, a United States citizen, is not obligated to observe the treaty.

Phil Kane did a superb job of setting you right on that. Again, a rant ruined by facts...they always are.

>The rest of Robeson's message is the usual personal insult:

>> Cowardly creep.

I notice you make no effort to deny it. Good for you.

>The morse code test may be Robeson's "test for manhood."

Nope. USMC boot camp did a pretty good job of that. Along with many other (non-amateur radio related) life changing events and experiences. None of which I am sure you had the opportunity to experience from the test bench.

>Robeson should, but seemingly cannot, explain on civil terms
>why the morse code test should remain forever and ever to be
>used as a test for newcomers to amateur radio.

First of all, only YOU insist that I think it should "remain forever". I never said this. It is a LIE promulgated by YOU.

Furthermore, "newcomers" have not HAD to sit for a Morse Code examination since February 14th, 1991. And to put the deathblow to your rant, Lennie, officials of the FCC have stated publicly that it will act accordingly when the BINDING treaty has been repealed.

Now...try truth and facts next time you come at me, Creep.

Hey Keith! take your head out and listen up for once!

NO ONE has ever suggested that CW was the "best" option for anything,
just that it can sometimes be the ONLY working option.

Uh, Rob I don't "tap out" code. Operators who use CW SEND code. tapping
is not involved. It can be done with about the same sort of composure
that you can talk, by those who are a little experie nced and practised.

>

So when did I or anyone suggest you shouldn't use the FM repeater or
even the cellphone when it is appropriate? Stick to the subject, if you
can.

You code haters are really clueless.

John, I was referring to the official nomenclature. Umm ... F2A? Dipped if I know. Where the heck is the handbook? I know it has to be F something (probably 2 since it used to be F2). Now you know how much the standards have been lowered. I didn't study (at all) and passed (from ground zero) the extra in 1993. Having also passed the extra in 1966, I assure you the tests were not easier back then.

>>Of course, CPR has saved many lives, but how many lives has the use of CW saved over the years? Many, many more I would think.

>Unproven except that such is your opinion.

Weeeeeellll, Lennie, we can START off in 1912 and move forward. April, 1912 to be specific. (I am sure you have some first hand "Back in ...." story, so I will say now you can save it) Of course that was several HUNDRED people saved at one time. We could cite hundreds of other situations in which Morse Code has "saved the day".

As for CPR, I can tell you with certain professioanl knowledge that even "text-book perfect" CPR delivered in a timely manner is NOT always successful. As a matter of fact, it still only has a recovery rate of approximately 12-22%.

As recently as the 1970's Morse Code was still being used for (real) distress situations, and the reluctance of many other countries to NOT delete Morse Code is proof that it's service last's into the 21st century.

>Then let it be optional in USE, not part of the license test. Amateur
>radio is NOT primarily a public safety radio service.

No, it's not, but it's ability to provide a level of emergency communications is it's PRIMARY validating factor in Part 97. I know you know this, and ignore it, but it's there. It's law. It's in writing. It's the hole in your sinking rants.

>Why not include a "proficiency test" at amateur radio bands above
>HF?

Why not get a license?

Several days of absence have not wisened you up. Same Creep.

Len, I think you may be mistaken on the old timer syndrome. Certainly, there are a few folks who are dismayed by the lowering of the CW requirements. I certainly don't have a problem with that. I have even seen it in print where some folks suggested retesting the old timers. I wouldn't have a problem with that - been there, done that. After 23 years of inactivity (and no license) I simply tested out. No problem, even with the 20 WPM CW test. With the direction the tests are taking in difficulty, I doubt any old timer would be frozen out. In any case, I will take your suggestion as to letting the folks who wish to get into the hobby set the requrements under advisement. In any case, I will try and keep my future QSOs at a more understandable level for any of these folks.

Good numbers to ya, good buddy, from Rochester, NY
Jim AA2QA

And you falling into that category would have a personal perspective? Based, of course, on all of your years of PRACTICAL experience in the Amateur Radio Service, as a member of the ARRL, or a participant in ASSORTED Amateur Radio activities...???

>All the major regulations should remain the same as
>when They became licensed...and they will continue to advocate
>that as long as they continue to view the avocation in their own
>personal terms.

Ooops....evidence that supports MY contention that you are without a clue....A statement made without the slightest clue as to what REAL Amateurs are doing/saying about ANY aspect of Amatuer Radio.

Of course I know you will cite the on-goings in THIS forum, but as has been mathematically proven before, the "representation" of ANY opinion in this NG AT BEST could be less than 1/4th of 1% of the Amateur census.

>There is absolutely nothing but personal
>preference in such a viewpoint and that "p-p" is totally against
>the wishes of the amateur community at large or the desires of
>those who might want to get into that hobby.

I see...Every American is supposed to adjust thier own personal preferences to satisfy YOUR desire for an Amateur License without the benefit of taking the currently required examination.

Cowardly creep.

>foremergency use. I guess you mean that they're all wasted then.

Dick:

No, that's just a typically "Cecil" point of view. Excluding the one time I did use my CW skill in an emergency, I would never say that that learning the code was a "waste" of my time, effort, or anything else. Remember -- this is about laziness -- nothing else. The entire NCTA is simply about justifying laziness.   And for most people, it's a lot easier to make excuses than to dedicate themselves to learning and gaining amateur proficiency in a valuable communications skill.

Your CW course, hands down. You can use the tapes to record your EMT
class.

Culley:

Uh, don't look now (literally) but the Morse code is definitely NOT
something that lends itself to being learned with flashcards. You need
to learn how the Morse characters sound; memorizing dot-dash
configurations visually is the wrong way to go. Code tapes,
computer programs, and over-the-air practice are the only way to

ensure quick, easy learning of the code, and the ability to progress beyond 10 WPM. My guess is you'll hear this advice a lot; but that's only because it is true. Please do the world a favor and eighty-six your Morse "flashcards."

> the wall. You know absolutely nothing about me but condemn me and make broad
> accusations.

No, just simple, astute observations. Any reasonably intelligent and

computer-literate person should be able to find the information you sought
without having to ask for a handout on Usenet. I used the Internet for
80% of the research I did during my recent college studies, and never
once did I have to ask anyone for any help. BTW, I received "A's" on
all my papers except one -- which involved no Internet research at all. I
got B+ on that one. If I could do this, you should be able to find out how
to renew a ham license without asking for a URL handout.

Jerry:

This is bad advice. Learning how to send the characters helps to learn how to receive them. The act of making the sound of the letter "C" helps to drill that sound into your memory-reflex system. I did not break out of the 10 WPM "plateau" until I built my first iambic keyer-paddle combo and started sending perfectly formed characters at higher speeds. Sending and receiving are inter-related skills which can and should be learned simultaneously.

Hey, Kim-- why not do a little learning while you're resting sometime? CW has saved a great many lives over the past century, not the least of which was the 1500 survivors of the Titanic. There have been many other similar cases. Yes, we know, today there are other modes of choice, and for darn sure, anyone in possesion of their senses will use them - if they are available. If not, then you would advocate just letting nature

```
take its course instead of using CW?

It seems even more mindless to have radio amateurs nattering
about English Language Style when they have no real authority
through their licensing to "rule" on it.

Are you the new lunchtime "hall monitor" in here or on you on a
diet and not eating lunch?  Is that lack of food making you
so aggressive?  :-)

Of course you missed the entire point. When one has to use gear which
requires you to learn how to copy code in extreme QRM conditions one
adjusts and learns how to do it.
Your computer doesn't have a chance to learn how to do that.

So then you really believe that the phone and cellphones will always be there for you. Right.

No one has ever suggested you give up anything at all. The point is that when you can use CW too you have another tool in the survival toolkit.

Yep. There was a day when CW was the best option for emergency
communication. Prior to that, there was heliograph, but I don't think
that the Army is teaching that anymore, either.

Short memory, or just selective, again? On the very last day that
500Khz
CW was used, a ship imn distress off England used SOS on CW to effect
its own rescue. That was only a couple years ago.

Yes, I know that isn't "ham radio". You are reminded that in a
lifesaving situation that distinction is moot.

>are doing/saying about ANY aspect of Amatuer Radio.

Far more "clues" here than there...except for the old-tyme
religion that epitomizes morse code testing.

Hint: The FCC authorizes US amateur radio licenses. The FCC
does not require either staff or commissioners to have amateur
radio licenses to regulate US amateur radio.

>   Of course I know you will cite the on-goings in THIS forum, but as has
>been mathematically proven before, the "representation" of ANY opinion in
>this NG AT BEST could be less than 1/4th of 1% of the Amateur census.

Robeson "knows" nothing of the kind.

>   I see...Every American is supposed to adjust thier own personal
>preferences to satisfy YOUR desire for an Amateur License without the benefit
>of taking the currently required examination.

Again, Robeson "knows" nothing of the kind...but Robeson insists
on retention of the morse code test in the license examination
because he had to take one.

The rest of Robeson's message is the usual personal insult:

>   Cowardly creep.

The morse code test may be Robeson's "test for manhood."

Robeson should, but seemingly cannot, explain on civil terms
why the morse code test should remain forever and ever to be
used as a test for newcomers to amateur radio.

BOYCOTT KENWOOD!

Confirmed Anti-Coders!

Here is an equipment manufacturer lobbying the FCC to drop CW testing.

This is a quote from Federal Communications Commission REPORT AND ORDER
Adopted: December 22, 1999

Released: December 30, 1999

By the Commission: (The entire document can be viewed in plain text at http://www.fcc.gov/Daily_Releases/Daily_Business/1999/db991230/fcc99412.txt)

28. ... Kenwood states that licensing of persons because they are proficient in Morse code is inconsistent with encouraging those interested in modern telecommunications to join the ranks of amateurs and become skilled in the technical sciences. ...
29. On the other hand, several commenters equate passing a telegraphy examination to the type of on-the-air operator a licensee will be, proof of skill level, or emergency communication capabilities. Kenwood, however, states that Morse code telecommunications is not a skill used often in emergency communications or disaster relief any longer. Other comments express a personal preference for exchanging messages with other amateur radio stations using telegraphy. While Kenwood agrees with these observations, it states, however, they are not a sufficient justification for keeping Morse code proficiency as a licensing requirement. ...

NO CW TEST means CB.

And only CBers would want to eliminate the only thing keeping ham radio from becoming CB. It is high time for firm action to save ham radio from the CBers and the lobbying profiteers. (The FCC mentions "Kenwood" in a policy-making action eleven times!!)

Since Kenwood has now entered the political arena, they are now subject to political response. WE DON'T NEED KENWOOD!

DO NOT BUY KENWOOD GEAR!

SIGN YOUR CALL WITH "BOYCOTT KENWOOD!"

Uhhhhhh Dick, the Titanic is not a good example. CW could have
saved the rest but didn't. Why do you think the people in the
lifeboats would not have been saved without CW?

Jim,

According to the 12th edition of the FCC rulebook of the ARRL, they've changed the terminology in part 97, and now use the term MCW, for example in section 97.305, "Authorized emission types", but they define it in 97.3 (c)(4) as

MCW. Tone-modulated international Morse code telegraphy emissions having designators with A,C,D,F,G,H or R as the first symbol; 2 as the second symbol; A or B as the third symbol.

The terms F2A and F2B are the ITU designations, and they mean telegraphy, for aural reception, and for automatic reception, respectively.

I guess that means that if I receive someone's signal with a morse interpreter program on my computer, I've forced their emission from A to B. :-).

Gee Len, you're an old fart but not a radio amateur. Please don't lump
those of us who have been licensed hams for decades in with the old
farts of the general population. The major failure in fact of your
latest musing would be that the amateur community at large is mostly
amateurs who have been around for decades. Your *desire* as a non-radio
amateur has little to do with anything. I *desire* many things that
I'll never achieve unless I apply myself toward obtaining them. Those
who might want to get into amateur radio might have to meet the
requirements rather than bleating about the inequity of it all.

If it is only a seeming intolerance and not a real one, there really isn't any issue.

Why should the policy arguments against amateur regulation changes stop? The policy arguments for amateur regulation change haven't stopped.

>Len, I think you may be mistaken on the old timer syndrome.

I seriously doubt it. :-)   Note that I've said "long-timer" and
"old fart" as a mindset, not chronological. I began legally
operating on HF in February, 1953.

>Certainly,
>there are a few folks who are dismayed by the lowering of the CW
>requirements.

Some are downright hostile. :-)

>I certainly don't have a problem with that.

Thank the Lord that there are still human beings in US amateur
radio! :-)

>I have even seen
>it in print where some folks suggested retesting the old timers. I wouldn't
>have a problem with that - been there, done that. After 23 years of
>inactivity (and no license) I simply tested out. No problem, even with the
>20 WPM CW test. With the direction the tests are taking in difficulty, I
>doubt any old timer would be frozen out.

I made absolutely no comment about chronological old-timers.
[difficult to do when one is such a chronological contemporary]

All I am advocating is the elimination of the morse code test
for any class of amateur radio license. That sort of thing results
in outright angry hostility by a number of pro-code-test advocates
who insist on keeping what myself and many others call a
"hazing ritual."

The technology of radio has advanced far since I first began
in it 49 years ago and, in the course of a career involving
radio and electronics, I've had to keep pace with that advance.
As I see it, many in US amateur radio want to keep the
avocation frozen in the standards and practices of the 1930s
or late 1940s. That includes keeping amateur radio licensing
in that same time frame, preserving morse code in a sort of
"living museum" as if that is the main skill that any radio
amateur should possess. To what end for a hobby?

>In any case, I will take your
>suggestion as to letting the folks who wish to get into the hobby set the

>requrements under advisement.

Right now the FCC sets the regulations for US amateur radio. Neither the staff nor the commissioners of the FCC are required to learn morse code or test for any amateur radio licenses. The FCC says publicly that it will accept input on regulation changes from any citizen. There exist a rather large number of us citizens who are not licensed in the US amateur radio service yet are quite competent in radio technology, radio operation, radio theory, and electronics in general.

I do thank you for your civil support. It is an agreeable even pleasureable sight to see someone who will not insult or demean someone simply because they have differing opinions.

>In any case, I will try and keep my future
>QSOs at a more understandable level for any of these folks.

That is how it should be in a civil society.

The problem is that many licensed radio people insist on forcing their personal hazing rituals on newcomers. US amateur radio is not a public safety radio service nor is it a military radio service nor is it any kind of occupational radio service. It is defined as a radio activity carried on without pecuniary compensation, the primary reason for using the word "amateur."

There should not be any reason to think that an "amateur" is demeaning...yet many amateurs will not hesitate to demean professionals. You have no doubt seen evidence of that in here. Such goes on off-line as well.

>Good numbers to ya, good buddy, from Rochester, NY
>Jim AA2QA

Thank you and the same in return, sincerely meant.

Dick Carroll wrote:
> Your computer doesn't have a chance to learn how to do that.

Dick, before showing off your ignorance again, I suggest you learn something about adaptive signal processing. These techniques are routinely used for separation of speech signals from background noise. It would work even better for CW.

Virtually all uncorrelated noise could be removed from a CW signal using adaptive DSP filtering. A computer can indeed "learn" while doing. AI and fuzzy logic could probably also be applied to CW. The reason that it hasn't been done for CW is that there are coding methods much superior to OOK/Morse.

Misdirection. Ah, yes. You seem to know a little something about that. Did you miss the fact that I simply reiterated what you said? Sorry you didn't like how foolish it looked. Guess that's why you deleted your words from your reply.

> Is this the extent of what you are supposed to be doing at UCI?

If you weren't so out of touch, you'd know that it's spring break.

Rose said 1500 people went into the sea that night.

Heck, the National Enquirer says they're still picking up Titanic survivers out of the water. A couple years ago they found the captain, and earlier this year they found a baby! I bet they've got a great bar there at the Enquirer. :-)

Doesn't need to. As mentioned before, my computer can pull out a signal far better than you could. Simply because it does the differentiation digitally rather than in an analogue manner.

And you believe that in an emergency with adrenaline pumping and having to run back and forth between a client and the radio that you would tap out legible code?

> No one has ever suggested you give up anything at all. The point is
> that when you can use CW too you have another tool in the survival
> toolkit.

But thats the thing ... because it is forced upon op's to learn it isn't merely a tool that you should learn but is unnecesary ... but a vital part of hf comm's.

I don't even carry a key in the car for my 706 for the most part ... and you still didn't rebut my point that the stations you would be asking for help would be local enough that voice comms would work fine.

When I go for my nightly drive home from work for a couple hrs (when I do actually toss the 10m antenna on the car). Outside locals, I hear a bunch of americans preaching parts of the bible. 20 40 or 80 are plenty better in the car.

Agreed.

But we're really talkning "apples and oranges" here, when comparing a radio
communications mode to an emergency medical procedure.

>>A minimal proficiency
>>in CW would certainly be a benefit and not a detriment to the hobby.
>
>If you stated that as being on a voluntary basis I'd have no
>argument. The facts, however, to support your statement as
>a mandatory test requirement don't add up.

It's really all a matter of opinion. What matters is that the FCC has decided
that voluntary is the way to go. Right or wrong, that's the future.
>
>> I
>>don't believe it has to be all or nothing. I maintain a proficiency in HF
>>voice communication and procedure for the same reason.
>
>Those that want to can and should be free to maintain CW
>proficiency. I support you on that...BUT not on mandatory
>requirement for same.
>
For many many years there has been no requirement to maintain proficiency in
anything in order to keep the license. Only requirement is to stay out of
trouble and keep sending in the correct forms at the correct time.

I support having as many tools in the toolbox as possible. That means
proficiency in as many modes used by amateurs as possible.

Sure it is. But the Republicis a better example.

> CW could have
>saved the rest but didn't.

How could "CW" have saved them, Cecil?

>Why do you think the people in the
>lifeboats would not have been saved without CW?

Because the ship which rescued the people in the boats (the Cunard liner Carpathia) was summoned by the mode.

Most of those who died in the Titanic disaster died of exposure and hypothermia, not drowning. Those in the boats were better off than those in the water, of course, but they they would not have lasted very long in the cold.

Find someone with a dish!. BBC America is running a Monty Python marathon this weekend.

Of course you will have to tape the Get Smart marathon on TV Land.

Sure it's off topic. Sorry about that Chief and get that penguin off my TV set.

Dick

It is my understanding that if the Titantic CW operator had been a
little less arrogant, the California CW operator might not have given
up in disgust and gone to bed. I think it was on a TV documentary where
it was reported that the California had CW traffic to pass but the
Titantic CW operator ordered him to QRT.

Were any survivors plucked directly from the water by the Carpathia?
I'm not trying to be difficult. I just don't know the answer.

So, how is it that the CW requirement here in the United States is
beneficial to all of those poor underpriveledged places that don't have the
benefit of anything other than a CW rig?  Your answer here really
contradicted your previous statement.

"That alone is enough reason to keep a CW requirement for the future. The
world is just not there yet. TGhere are MANY areas of the world where
even a CW rig is not availble and would be considered a highly
desireable technical communications asset."

That's pretty damn good from those PV cells. I've been thinking about getting a PV panel for use in charging. I could be charging one battery while using the other.   No real need for a generator here. I can charge these if desperate off the truck alternator. Looks like one nice thing about VHF/UHF is the lower cost of backup power. I have about $150 invested for what I have.   How far from your rig is the battery set up at? Mine is small enough that I keep it within 2 feet but I'm not looking at 11 cells either. Did or have you look/looked into old telco batteries? I've heard they can be had for nothing as the telco company throws them out (usually paying to have them disposed of) long before they are at the end of their life. I'm going to bring this up at the next club meeting.

these panels are about 2' x 4' ... have 4 of them ... the holes that hte bolts would pass through are where i place a tether ... one on either slope of the roof ... the same hole in the wall where my cables come in is where the power cables come in ... the batteries sit under my stairs on a skid with 10 gauge wires heading to the station about 15' away ...

I was in a hurry for the batteries (needed em for field day) so decided to buy em .. whats money for if ya can't spend it eh

I already said that the landlines were very busy and that cell phones were useless from early on. We made a decision to use the most viable communication method available to us. It worked out just fine. It is quite clear to me that you don't have the ability to see through your own prejudice against CW. I made my point and I will leave it at that. The next time we have a need for CW in our area, we will use it (regardless of your esteemed opinion). You, on the other hand, can "tap" out whatever you like on the case of your HT.

You couldn't demean the value of code if you worked at it 24 hours a day.
CW is, and will be, a valuable part of the ARS for as long as there is an
ARS.

Which is exactly our point. Doesn't it sound kinda funny that the lifesaving
mode of CW can't help unless someone has a cell phone or voice capability?
Isn't that kinda akin to throwing life preservers to the guys that already
made it to shore?

so everyone within 300 miles was on the phone ... you couldn't ssb your way to another station in a different county ?

besides that ... I only use my ht's when I play paint ball with my friends ... outside that I use my ts440sat or ic706 ... nice cheap rigs

I'm here to help you out the big mud pit you've dug for yourself, Rob. You obviously have never worked for an organized emergency operation or you would know that messages are sent and received from every part of the state. Information concerning weather, damage reports, and movement of evacuees is exchanged. EOCs from all over the state exchange messages with each other. Some of that info is exchanged using CW. Now, I know you didn't want to hear that, but those are the facts.

Apparently you think that someone has to be bleeding profusely before we are allowed to send or receive information from an EOC. By and large, most of the operators are calm, collected, and do one heck of a job. I guess they just fall to pieces in your area.

so you are telling me that stations within 1-200kms would be too weak to
copy even with an s3 ? cummon ... besides that there are 10 hf bands to use
...

So do you have to actually go up on the roof to place them or is it such

that you can reach there from a window or something? Sounds like a cool setup. I'm looking to get a house next year and it will definitely have a basement for my shack. I would like to expand my backup power a bit to be able to run other things off of it. If I do, I'm looking into those telco batteries. I didn't think those liked being deep discharged. I guess it doesn't happen very often though and you do have 800 Ah to play with.
I guess I'm using my money right then, cause it all seems to get spent. :-)

Other modes work great, and I try to use them all. By the way, SSB is fast approaching 60 years old, not exactly a spring chicken. Maybe we should get rid of this antiquated mode, huh? I mean, other modes work much better. Heck, we could set up a digipeater system that links the whole country and get rid of SSB and 90% of the digital modes. Now that's progress.

You can have an s-10 signal, and with QRN or QRM will not be able to copy a single word on SSB. As to your point that there are 10 HF bands. That's true, but generally speaking only 40, 80 and 20 are used for emergency comms. The EOC and state EMA have established certain bands and frequencies for use. They do this so that they have a focal point for communications. The EOC makes the decision if and when to move to different bands or frequencies.

I have worked with Red Cross since 95 ... have worked during the ice storm
as well as several localised problems ...

and since when is a state more than 200kms accross ? or the damage that
severe that even all of 200 kms inland destroyed so that not a single
telephone or ssb rig is useful ...

as far as the operators being calm ... i havent seen a single person (myself
included) not be shaky during cpr ...

Is the repeater in your backyard, or are you going to have to negotiate roads closed by whatever weather event that took down the repeater to get to the mountaintop its on? No situation fits all cases, you know.

my roofline is only 8' up ... a small ladder works fine ...

the batteries for the most part don't get discharged ... even with a 50/50 duty cycle ...(that's only 10.5aH) so the charger doesn't do much ... now at night with a whole 20watt light running as well ..

I wouldn't say that ... just know where money is appropriate to be spent =)
the rig cost me $600 canadian (about $3 american)

The 706 was a grand ... but I was bored that day so it worked out nice ...

Sounds good to me ... with the number of operators out there that turn their
mic gain up to the hilt to increase their output power it may be a good idea

up here we use whats available ... and for the most part thats vhf ...
antennas are smaller ... 50 watts goes a long way ... and with repeaters and
the IPARN network we dont have any issue communicating 800km's easy as clean
as day

```

Ya im sure if my whole province got ripped off the earth ... there would be
a reason ...

regardless ... I have a sat phone ... if all hf 1MHz to 30MHz was blanketted
with s9+30dB I could still communicated globally ...

I ain't out here to "give" you reasons for anything and what you
"need" is equally irrelevant, fact is that organized ham
traffic-handlers serve Red Cross comms needs which quite often involve
overseas ops. Keep wheeling and praying that anybody gives a rat's ass
about what you do with yer lame 706.

You believe that, Arnie. I believe that. How the heck are we going
to convince Dick that CW has enough merits to survive and thrive?

That sort of thing happens regularly, as a matter of fact. Recently
reported in the ham press was just such a case, it wasn't a grass hut in
Paraguay, but a couple in a small oceangoing vessel off Venuzuala that
was attacked by pirates and
the man was shot through the abdoman. He was a ham and had an HF rig
aboard. His wife broke in on the Maritime Mobile service net on 20 meter
SSB, described the situation and the net members started things rolling.
They contacted the US Coast
Guard who coordinated with local naval authorities in the area of the
boat. Among they they got the injured ham to a hospital where he at
least is still alive.
The ham press has reported numerous such cases over the years, several
in recent times.

To answer your question, in that specific circumstance, you would
first and foremost get all the information from him, exactly where he
is, the exact nature of the problem, number of persons involved, injured
or killed, the assistance required and the degree of urgency (if it is
not apparent by this time). Once you have all that information, make
sure the station is told to stay on the air, on the frequency if
possible so that other stations can communicate with him as needed as
the operation gets under way. Only then should you begin to get a relief
effort started.

It is important to know that you don't have to contact the exactly
correct authority to get things rolling. The US Air Force is responsible
for search and rescue operations within the USA and maintains an
emergency telephone number strictly for emergency calls. Emergency
relief operations at sea are handled by the US Coast Guard. If the
problem doesn't lie within their areas of responsibility, they will know
where to route the call so that time isn't wasted while you try to sort
it out.
I'm rather sure that the US Department of State has a Staff Duty
Officer who would quickly handle such traffic to other countries. It
might take a call to Directory Assistance to obtain the number. Maybe
Dave Heil K8MN can add something on this. Your local law enforcement
authorities can usually handle this sort of call, although it will slow
things down -more relaying will be needed- if you wind up going this

route.

You have no doubt noticed that CW has not so far been mentioned. Of course anyone who has other better means to use will use them. But when hams can copy CW any station who needs to do so can call in on a SSB net on CW and get the same response and service. It happens. When hams can no longer copy CW it won't.

I keep a manila folder on the clipboard with my radio log that is labeled "Emergency Communications". In it there is a copy of a CQ Magazine article from November 1982 entitled "What To Do When You Hear A Radio Call For Help". It contains a collection of suggestions and tips as well as telephone numbers of various USAF and USCG search and rescue centers along with an excerpt from a letter from the Commander of Search and Resce operations in the 11th Coast Guard district that says:

"Amateur Radio Operators are a valuable resource to those of us in the search and rescue business. They have been directly responsible for saving many lives by providing timely and accurate information to rescue facilities. We in the Coast Guard appreciate your interest and continued service".

This magazine article is nearly 20 years old, for sure very much dated, and needs to be replaced with something much more current. ARRL, are you listening?

The repeater is in the rear parking lot of the sheriff's office/county jail about 1/4 mile from my house. The repeater antenna is mounted on top of the water tower - great ground plane.

Cecil:

Don't look now, but hams have always had choice of modes they wish
to employ.  In fact, when code testing at adequate proficiency levels was a
requirement for HF licensing, their "choices" were greatly enhanced.
The only thing the elimination of adequate code testing has done is
convince potential hams that this hobby is not deserving of their time or
effort, since little is required of them to enter it.

What friend? What "cruel and malevolent harassment?" Provide names,
quotes, and other proof, if you can. In the meantime, I'm getting sick and
tired of your false accusations and character assassination. You've really
hit bottom here, Cecil. You never could carry your weight in an argument
with me, and now it has degenerated to this. Shame on you.

I agree that VHF is a great way to communicate given certain conditions. But it is only one of many. Why limit the your ability to just one mode? Every mode that is available should be included. That's why our EOC has the capability for VHF, HF and digital modes. We use what works the best for the current conditions. If that means using HF SSB for local / long distance communications, VHF through a repeater or as simplex, or CW when conditions warrant, then that's what should be done. It seems to me that you are placing a very high premium on one or two modes. In my own shack I have the capability to use VHF, SSB, digital and CW, and I will maintain my proficiency in all those modes. It just makes good sense to do that. I am wondering why you don't think it's a good idea to have as many tools available as possible, or why you would demean one mode over another. They all have value.

That's impressive, you've done your homework and appear ready for a local emergency. Good show.

I have a motor home with a 4 KW generator and a 40 gallon gasoline tank that I keep filled. It is equipped with antennas and wired for use as a ham radio station. I Also have a 12 volt bank of telephone central office wet cells in my shop that would power a 100 watt HF rig on any mode and a two meter rig for a LONG time, a week or two I'm sure.

You're right, of course- the transceivers are just antenna drivers and loads, and all the hams are just remote reporting devices.

Actually it's two, Bill. We had to have at least one other to receive the messages. Plus you are forgetting the State CW traffic net with an additional 100 or so operators that support the EOC during disasters. I know, there couldn't possibly be that many CW ops these days : -))

So what else is news? I'm not talking about decoding CW with my IC756,
I would be very pleased if it would just do a reasonable job on noise
reduction. It was and is a DSP disappointment. Most of the decoding
functions are done in a computer sound card or a standalone terminal
unit. Got that?

CW decoding is what we
> are discussing

No, that's want YOU'RE discussing. It's what you've been raving about
for years but you just can't seem to find time to work it up. Ever.

> and I know of no transceiver, including your 756,
> that will decode Morse code. Please educate yourself on the

"Bill Sohl" wrote ...

> How about giving us an example of when/why HF would be
> needed.
>

It seems to me that "local" communications is all the rage these days.  Not
much thought is given to the need for HF to communicate with State or
National EOCs.  When Hurricane Floyd was here, we used local VHF through
```

simplex and repeaters to report to the county EOC, who then used HF to communicate with the State EOC, giving them valuable information for use in planning and response. Since the Savannah area had to be evacuated, communication with shelters in Macon and even Atlanta was a vital part of the operation. HF communication was the obvious choice. Can you imagine trying to maintain a repeater network to communicate when HF can handle that with two radios and two antennas? Why re-invent the wheel when it works just fine?

I usually just bang my fist on the knob at about 20 wpm in an attempt to get out the right letters. Sorta like a stapler :-)) However, the last time I checked, my straight key didn't have a paddle on it. I guess they changed it while I wasn't looking. If you are actually referring to a set of paddles, then that would be thumb dits and finger dahs. Or ... I just don't know what I'm talking about and I too am a "Yutz" Unless, of course, I'm correct.

Yep, the topic has been discussed to the point of absurdity.

Obviously, there is absolutely nothing wrong with having an opinion on the matter, and voicing that opinion occasionally (I do it myself), but the almost endless passionate fights over this subject are a little tiring ("beating a dead horse" comes to mind).

Personally, I'd like to see the code requirement dropped entirely (and I've said so several time before). However, that will happen if, and when, it happens. And, if it doesn't, that is just fine also. I'm not going to lose sleep over it either way. If I decide to upgrade, I'll take whatever test is required at the time.

Obviously so. However, I prefer not to endlessly "discuss" that
subject, so I hope you'll pardon me if I drop in another topic
occasionally. In the future, I'll make sure to mark those message as
"not related to the code debate." :-)

"Our" point, Rob is that CW is still a viable communications tool that should and can be used to enhance emergency communications. The EOC had landlines, cell phones, HF and VHF equipment available for use.

In our case, cell phone lines were overloaded (useless), landlines were working, but were very busy. VHF didn't have the capability to reach out 300 miles, and SSB was racked with QRN. CW was clearly the communication tool of choice at the time. Once the QRN cleared, we went back to SSB, which was clearly the mode of choice when readable.

Your side seems to think that local voice communication is the end all solution to every problem. I was merely showing that it was not, and that CW was still a good tool to have available.

>>And it does NOT indicate that I "represent all of US Amateur Radio".

>The royal use of "we" in voicing an opinion most assuredly says you do.

No...it simply puts me in the majority...which when considered against you, means one ov over 600,000 LICENSED Amatuer Radio opertors...something YOU are NOT.

>A majority of what? Credential freaks? Control frieaks?
>Mental obsessives who are unable to civilly discuss, debate,
>or argue a subject without tossing in constant personal
>pejoratives?

"Frieaks"...??   Oh...I forgot...spelling correction Of His High An Meaningless is not applicable here.....

The rest is humorous, coming from you. You discuss or debate nothing. You assert your opinion and dare anyone to NOT agree with you. The rest is fodder for the flamefest.

>I am no such "member."

Sure you are. You're the Frieak Supreme.

>Now, now, Yiddish you ain't. But you still have this obsessive need
>to insult the person, don't you? Why is that?

I asked you the same question over two years ago, Lennie. I asked you to lose the "Nazi", "Brownshirt" and "jackboot" analogies. You refused, pushing the buttons more freverently and agggressively, adding frequent profanities and other schoolyard humiliations to the fray.

You got exactly what you wanted. Want some salt and pepper, Lennie?

Or would you prefer to consider apologizing for your OWN "persoanl pejoratives" and see the flamefest stop?

I am ameniable either way. Your choice.

>Last I looked, Element 1 was still required for morse code tests.

And per yor own admission, the FCC is still bound by treaty to honor this commitment.

Unless the FCC issued a new Report and Order on Part 97?

>As a matter of fact, Al Walston, W6MJN, was Best Man at my
>wedding.

Chances are he was the ONLY man at your wedding, Lennie.

>My mother died on February 18, 2001 at about 10 AM.

>Thank you for your condolences..

You DO have my condolences, Len. May she rest in the eternal peace of the love of our Saviour.

I lost my Dad in February of 99 and then Tater died less than 90 days later. However it still does not negate the statement that you tried to blunt with the revelation of your Mother's passing.

YOU still do not have the frame of reference of a PARENT who has lost a child AND must deal with a professional level of dealing with other persons losses in an objective manner. Although it affects each of us diffently, we are all predisposed to the ultimate probability of burying our parents. And knowing your age and presuming an age of at least 20 at childbirth, it would be apparent that she lived a long life.

>>A matter of public record, and unlike you, I feel no need to recite
>>page's long CV's in order to bully others.

>Translation: Robeson can't describe it.

No. Lennie, it means I don't HAVE to describe it. I am not accumulating the "message points" you so desperately covet. I served and the USMC was glad to issue an Honorable DD-214 for it. I also have licenses to practice nursing (with the necessary ancilliary endorsements for advanced skills as necessary) I don't have to detail what state, the dates of grant and expiration or numbers in order to state that I AM a nurse.

>>Terminated? Hmmm...the hospital I worked at last night will be surprised to hear that....As >>will several others.

>So...do you still have the purchasing agent job or not?

And in either case, the relativity to Amatuer Radio is...?!?! Is it your assertion that I cannot do both for WHATEVER reason I would choose to do so?

Take a break, Your Putziness...you are grabbing at straws again.

Another late night in the Message Wars, Lennie?

>Robeson has taken things out of context. It is very, very legal
>to use the title of ENGINEER (even in lower-case) without having
>a state-issued professional engineering license.

I never said it wasn't, Lennie. However it IS illegal to state your are a "Professional Engineer" without said licensure. Just as it would be illegal for me to state I am a Nurse without same licensure.

>>>Yes, I was an electronics technician prior to 1964. The interesting
>>>part is that industry doesn't need all the anal-retentive
>>>"qualifications" and "licensing" you insist on in order to DO THE

>>>WORK of engineering or in assuming responsibility of pass or
>>>fail of a work task

>>Oh, I SEE! So, by virtue of doing the WORK, you are justified in
>>claiming the TITLE...! ! ! !

>No, Robeson jumps mightily into the conclusion pit.

I didn't jump into anything, Lennie. You said you were an Engineer by virtue of "doing the work" and receiving a salary for having done the work.

I am not a Physician, yet I do specific tasks as directed by the Physician. I receive a salary for those tasks. By YOUR OWN WORDS, I should be able to claim the title of Physician.

>My title there,
>company-bestowed, was Cheif Engineer of the Instrument
>Division. Very legal.

I am sure it was. But "Professional Engineer" is not.

>Purchasing Agent Robeson (if he is still employed as such) can
>call himself whatever he wants. :-)   He is strong, he is mighty,
>able to leap tall pileups in a single bound!

No...I still require a running start.

>Sigh...Robeson still doesn't understand the workings of a democratic
>representative republic or realize that amateur radio physics is
>exactly the same as radio physics of every other radio service.

Double sigh bac at ya, Lennie. YOU don't understand that I have repeatedly acknowledged both to you and this humble assemblage that the physics ARE the same. It's the PRACTICE that YOU refuse to acknowledge as different.

>Robeson is a "credential" freak, a control freak who has an
>obsession with trying to "get" another who won't stand for his
>bullying, intimidating attitude and constant personal pejoratives
>used in place of civil replies on subjects.

Since you are essentially the only person that have such a "relationship" with, I can't help but point out that this is, as I have always contended, a "reply-in-kind" exchange. An apology will elicit a like response and a cooling of the flames. I have made this offer before only to ahve you make light of it. Your choice, your consequences.

>Good luck on your next job interview..

For someone who brags on a CV that has page after page of non-career length employment affiliations, I am sure the "job interview" is a situation with which you are intimately familiar.

"An America Not Preapred For War In Peacetime Will Not Know Peace In Any Time."

You speak for your area and I'll speak for mine. Quite a few fire stations
around here have at least one ham working in it. About 90% of our OEM
personnel are hams. I'm sorry to hear about your locations shortcomings.

And I'm sure there was ample need to be able to talk several hundred kilometers ... after all noone within range of a MOBILE station couldn't help eh ... gimme a break ... a dipole even at 1/2 wave will give you sufficient gain to be able to communicate 1-200 km's on ssb with no trouble.

It makes little sense that there would be more of them on 10m than any other band. I don't believe that any of those individuals described is addressing you directly. The little VFO tuning knob does wonders for ensuring that you are able to avoid listening.

I spent eight hours a day for ten years doing it, Dick, and I am retired from it. I have the luxury of doing what I enjoy now and I don't enjoy wasting my time trying to make you less ignorant. If you need some algorithms to get you started I would suggest, "Digital Signal Processing, A Practical Approach" by Ifeachor and Jervis.

> You're the character making all the claims on how easy it all is. So
> why don't you prove it by doing it?

I don't enjoy doing it, Dick. And if I spent months designing a system that could copy CW as well as the average ham, it still wouldn't be nearly as good as PACTOR II. You are the one who wants to see it done so get off your butt and do it. I've got more enjoyable things to do.

My elevated radial 40m vertical is about half finished. I almost made a mistake yesterday. I use solid copper wire for buried radials and I started to use that same wire for elevated radials.

Please pay attention, Dick. It wasn't me doing the comparison. Someone
said CW saves more lives than CPR. I questioned that statement.

To alleviate your apples/oranges confusion, consider the purpose of a ham license VS the purpose of the Morse code requirement.

Some of the mountain top repeaters are solar powered so I don't
see why you are laughing. Our local repeater is designed such
that anyone with a vehicle and a pair of jumper cables can get
the repeater back on the air. A little planning and ingenuity
go a long way in keeping electronic systems operational.

Ahhhhhh, so a straight key is not the "correct manner". All those WWII
CW operators we see on the History Channel were not sending CW in the
"correct manner". Have you told the ARRL that they should cancel Straight
Key Night because a straight key is not the "correct manner" for sending
Morse code?

What mistake? Straight keys make tapping sounds. The stock Bencher straight key makes a tapping sound every time the key is depressed or relaxed. Have you forgotten what straight keys sound like, Dick?

So, you did write "seeming intolerance" but don't want to refer to that now.

How many years do we need to hash and rehash this? It is still because I believe it to be a watering down of standards in order to create "Ham Radio Lite". Morse is still used extensively in amateur radio whether other services use it or not.

> >Heil does voice his grievances as does Anderson. Anderson pontificates

Stating my views regarding your manner does not constitute well poisoning. It is observation :)

Your mind is closed to the idea that you are guilty of what you accuse others of doing.

Len, you've insulted others here for years but you seem to think that you should somehow be immune. You can't expect to waltz into an amateur radio newsgroup in your Foghorn Leghorn costume and proceed to tell hams how it should be withoutt taking heat for your views.

> >When I entered amateur radio and each time I've undertaken an upgrade of

> Why do you have such an attitude?

'Cuz I'm the kind of guy who sets his goals and sets about obtaining them. You, on the other hand, are the kind of guy who sits on the sidelines and issues cat calls. You are the ham radio equivalent of a Monday morning quarterback.

> >At no time did I demand that those standards be lowered for my

The old "obey the LAW" ploy is how the country works.

> Regulations on amateur radio were made by humans, not
> gods. Regulations are changeable by humans. In a democratic
> republic we citizens can strive to change laws, regulations, and
> rules made by humans in government. Heil seems to think
> that everyone must jump unquestioning through the same
> hoops he did. Why that attitude?

Some citizens might desire and change and some other citizens might oppose the proposed change.

I don't believe there are any hoops at all, Len.

> If anything were to be changed in US amateur radio regulations

Put enough :-) characters into your stuff so that people will think this is all said in jest, huh?

> Heil may not be in a humorous mood to appreciate the
> irony in the above. Heil is rarely appreciative of anything
> not involved in the absolute obeyance of the existing law,
> the mighty and noble perserverance to meet those laws
> as they are. Why does Heil have such an attitude?

You have no idea of what I appreciate. I'll let you in on one: I appreciate the fact that you suffer the ham radio equivalent of penis envy. We're on the inside and you are on the outside. It galls you. If you want in, you'll have to set about meeting the requirements for a license. Your comment about getting an Extra "out of the box" shows one instance where you farted and fell.

Dave K8MN

Not mention the fact that he is illegal as hell if using an "opened up"
ham HT to talk the the paramedics.

Oh. And I don't. Right.

trying to make you less ignorant. If you
> need some algorithms to get you started I would suggest, "Digital
> Signal Processing, A Practical Approach" by Ifeachor and Jervis.

I've owned a half dozen DSP units designed for ham radio and none was worth keeping. I boubht a Icom 756 partly because of its DSP and find that it is rarely beneficial on the air. Usually the half kc crystal filter is what helps by far the most. I know, you digigeeks are forever improving your algorithms. Why can't you do it right maybe after the first dozen times if you'r so bright?

>

One hell of a big IF, Pal.

> it still wouldn't be
> nearly as good as PACTOR II.

Indeed, and no one ever said otherwise.

> You are the one who wants to see it done
> so get off your butt and do it.

Confused about who said what again? YOU were the instigator of "why don't you" not me. I only want hams to learn to use the most basic radiocommunications mode, as well as all the newer ones. YOU are the advocate of dumping aht ARS's most basic radiocommunications capability, not me. And make no mistake, not many years after there is no CW test whatever required, it will be completely gone as a viable communications asset.

And how many do you see sitting unused out at repeater sites? darn few. Best to haul one to the site when needed.

The entire thrust here is to make the singular point that CW is an ADDED capability, not intended in any way to replace repeaters, HF SSB nor any other mode that anyone has available, especially one that is efficient and easily used. What you people who disdain CW don't understand it what others her have experienced- there are many times that come along when nothing else that is available will dothe job.

I know that techies don't even like to think about it, _Cecil is the best evidence- but it happens. Regularly.

As time progresses and more of the later modes become much more widespread it easily follows that these incidents would be lessened, as has already occurred in the more advanced areas where technology is msor affordable. Much of the world does NOT have that sort of luxury. By your definition we should just ignore distress calls from others who may not have available more modern modes. There will be no choice whem no hams are available who bothered to learn to use CW.

That alone is enough reason to keep a CW requirement for the future. The world is just not there yet. TGhere are MANY areas of the world where even a CW rig is not availble and would be considered a highly desireable technical communications asset.

Nowhere else in ham radio will you find comms so dependent on an
infrastructure as these shack-on--belt types need. And they call it
"ham radio".

NO, NO, NO, a thousand times NO!!!!! In my pre-arthiritis days I could handle a straight key with the best of them, still can do a passable job. But anyone who even suggests "tapping" out code with a key clearly does not know how CW is sent with a key, or he wouldn't even hint in passing of such a thing. "Tapping" a key is the mark of a rank beginner and you should know that is totally incorrect if if you really know anything about CW at all. No wonder you never got above 10 or 12 wpm. You GRASP a key knob with thumb and two fingers and *actuate* it to form characters.

  Bullshit Cecil, he said "tapping out code" and that is wrong, wrong,
wrong. Only after he and *you* were called onit did you change your
story, as always.

but it certainly stops people from being able to operate on hf (a rather
arbitrary restriction i might add)

and as mentioned ... I do carry a 12wpm as well as my advanced ... I am sure
if some sort of device went off that specifically targetted all those hf
radios who have ssb cap. and destroyed them there would be a need for it ...

but in reality ... on land there is not a need for >100km emergency traffic

Ok. Tonight as you are roaming the bands looking for some DX you hear a
distress call from Paraguay. It is from a guy in a grass hut that has no
other form of communication. His situation is of an urgent medical nature.
Please describe what you do. This is a serious question. Please answer
seriously.

Please describe the backup power source you have in your shack that allows
high power HF comms in a blackout. How long can you operate before needing
either grid power or a generator? I am using 2 deepcycle batteries which
will allow me to run a 2M 50W packet station, a 2M 10W simplex station to
connect to County EMS, a 6M 10W ssb radio for communications with the 6M net
and a 50W 2M/440 Dual band radio which connects me to both the 2M and 440
nets for about 48 hours continuous before needing a charge.. Another 7AH
sealed lead acid battery will power 2 fluorescent lights for several days
before needing charged. Since we run 2 hour shifts as NCS I can pretty
safely double that for actual use run time since I will only be operating 12
hours a day. The system is always running off of the battery which is being
charged constantly with at least a maintenance charge so I don't have to do
anything to switch over to backup power. As for needing the repeater
infrastructure, I can hit all but 1 repeater on low(5-10W) and can pretty
much cover the area using simplex and high (45-50W) power and I don't
believe there has ever been a 13 county blackout.
I look forward to hearing about your power setup. I realize you were talking
about the repeater but that is only one piece of it.

You're showing your ignorance again, Dick. DSP filtering and
DSP decoding are separate functions. CW decoding is what we
are discussing and I know of no transceiver, including your 756,
that will decode Morse code. Please educate yourself on the
subject before you embarrass yourself any further.

> > And if I spent months designing a system
> > that could copy CW as well as the average ham, it still wouldn't be
> > nearly as good as PACTOR II.
>
> Indeed, and no one ever said otherwise.

Indeed, that's why no one has wasted his time doing it. You are free
to waste your time if you really want that function done, but don't
expect me to waste my time doing it for you.

> YOU are the
> advocate of dumping aht ARS's most basic radiocommunications capability,
> not me.

Liar, liar, pants on fire. I want to dump the Morse code *test*, not
the CW mode. That you believe CW cannot stand on its own merits without
a governmental affirmative action program just shows how little faith
you have in the mode you advocate. I, OTOH, believe that CW will survive
and thrive on its own merits but if it cannot survive on its own merits,
it doesn't deserve a governmental welfare program to prop it up.

> And make no mistake, not many years after there is no CW test
> whatever required, it will be completely gone as a viable communications
> asset.

Your sky-is-falling scare tactics haven't worked so far, Dick. Nothing
you have predicted so far has come to pass. Where are hoards of CBers
and freebanders that you predicted? CW will not be gone. CW will outlive
you and me. (How can you expect anyone to take you seriously when you
have never been right?)

Please stop lying about what I said, Dick. Because CW could be useful in an emergency is not a good reason to force it down the throat of every HF ham. Why can't the hams who want to use CW use it and leave the other hams free to choose their own emegency preparation methods? What is wrong with freedom of choice of modes in a hobby in a free country? What is wrong with live and let live? How would you like for me to try to dictate your personal methods of preparation for emergencies?

You are an absolute moron, Dick. It is not the hand that does the tapping. It is the key that does the tapping. The hand and the key act as a single unit. "Tapping out CW" means the tapping sound that comes from the staight key. You can observe WWII CW operators tapping out CW almost any night of the week on The History Channel. Are you too deaf to hear a key tapping?

"Tapping out code" means the sound made by a straight key while code
is being sent. Would you like me to send you a tape of my straight
key making tapping sounds? What an absolute doofus you are.

To each his own, Peter. Spam will be with us no matter what, and probably the best way to deal with it is a filter. I tend to not use filters in newsgroups because, to quote a friend of mine who does the same: "I like to have the latest figure of the index of stupidity".

I use 11 1.2V 800aH cells trickle charged off a small 3W solar cell. If need be, I can unpack a 500W (4 cell) solar station from a box I keep for when I do field day type excercises. Seeing as how my station runs about 100W output (thus a 21A draw at 13.8V ... 289.8W ... 300 to be nice ...). And if the earth is covered in a blanket of dust so as to make my solar station unusable ... i can drag the generator out of the garage and use it to power most of the house!.

The solar station cost me 750$ canadian ... including the voltage regulation. The batteries cost abouyt 120$ a piece and the trickle charger cost about 100$ So a cost of about 1000$ total ... not bad for emergencies ... I must add Even when its cloudy I still can get on average 400W from the solar cells.

I'm curious. What brand of straight key do you own? I've never seen a straight key that didn't have a knob on it. I have both a Bencher straight key and paddles, one has a knob on it and one doesn't. Feel free to guess which one does and which one doesn't. I must be honest, though. Neither one of them goes tap tap tap. That's probably because I control both the up and down motion of the straight key to form the letters and the paddles do their work in silence.

Are you referring to iambic? That means squeeze. Paddles should not be tapped to form letters, they should be squeezed to form letters. Aren't you glad we are here to elmer you. You are a very lucky Ham indeed.

Yes, and every doctor should have that capability too. Just in case they need to fly a patient to another hospital. We are Hams, Rob. We should use the tools available to us as Hams. Having a proficiency in as many modes as possible will only enhance your ability as a Ham. In other words, it's a good thing, not a bad thing.

You must have a gift. I've never had anyone insert himself into a QSO I
was having and quote scripture to me. Maybe you just come off as a guy
who is in desparate need of salvation.

I'm not going to argue against CW here but I have a question. IF you had
had a packet rig set up, would it have worked? Would it have been able to
get through the noise? I ask because I often get packets from stations that
I can't hear at all over a speaker.

I seem to be getting QSL cards from folks I've never worked! The phony KH6O is on 10m CW, handing out "his" 10-10 number! I would greatly appreciate anyone hearing him taking a beam heading so we can attempt to triangulate an approximate QTH of this fellow.

73, Jeff KH6O

Not everyone lives in a dinky little state. Here it's 150 miles to the
state capitol and twice that to the other side. The National Guard had,
last I knew, a
HF SSB net that met daily. The state ham SSB net meets daily to pass
whatever
traffic they can dream up just for practice. And if/when the New Madrid
fault goes off, I expect some of these practice nets will get some
realtime use.

Till you were swatted with that one yoiu swore that NO ONE was using CW
for disater planning. It woulkdn't matter how many you're told about,
it'l never
satisfy you. Those who forsee the possible need, and can USE CW will be
the people
who plan far enough head to keep it. Of course in NJ you can use a
handietalkie.

And you don't have to wonder what will be left of the repeater network
after the big wind stops blowing. String up a new HF wire and go back to
it.

Dick

Please explain how 1 year ago there were more choices available. What was
available then that is not now?

Thank you for the direct answer.   I'm not here to incite argument about this. I have my own opinions and enjoy asking relative questions that help to make my opinion more informed.   I may or may not change my opinion but answers such as this go a long way toward gaining my respect for those that know CW and utilize it in this manner. Many of the other arguments have immediately turned me off as being purely emotional and from the attitude of ,"I'm better than you because of this". Those go directly into the trash without consideration. I do not in any way wish to see the mode die. In fact, I'm trying to get my ham club to start an education committee so classes can be started and maybe get some of the boy scouts and other youth groups into the picture, and this includes CW.

Thanks. That felt good to hear. I wish I was in a position to have a
generator for several reasons, but until I get out of an apartment I'm
afraid it really isn't an option. A barrel of gas and a generator don't
exactly go with a 1 bedroom apartment. PV cells...maybe.. Hopefully next
year if I can find a good place around here that allows antennas. I'm
having to rely on stealth for now. Not allowed any antennas and I have 3.
I think they only know about 1 of them and I explained Skywarn to one of the
complex managers and they seemed impressed. I guess enough that they
haven't made me take them down.
Did you get a deal on those batteries? Is it true what I have heard that
they 'can' be had for next to nothing or were those rare instances? Among
many other things, I'm trying to get the others in the club (mostly old
timers) to get something similar at their homes. I'm having better luck
with the new blood for some reason but at 32 I'm the 2nd youngest there. It
isn't quite bad enough that everyone needs to label their teeth or anything,
but in another 5 years.... hehehe.

If I could bang out 20 wpm with that method I'd have no use for women.  Let
alone time for radio... :-)

HF hams don't. They must first pass a stand-alone skill exam on the fundamentals of one single mode. Only after that do they have any freedom of choice. What is it about "requirement" that you don't understand?

Of course, you are trying to change the topic which is that DSP techniques
can be used to decode Morse code. Those techniques are supported by theory.
The reason that nobody has done it is it would be a waste of MIPS to
choose Morse code as the coding scheme.

```
>  CW decoding is what we
> > are discussing
>
>  No, that's want YOU'RE discussing.

Well, since I brought the subject up, why are you trying to change the
subject?

> The kindly shut up about it, say what?

Sorry, Dick, you are not moderator of this newsgroup.

>  Sad part is you really believe that against mounds of evidence, right
> here on rrap.

The mounds of evidence exist only in your delusional mind, Dick. Unlike
you, I believe that CW has merits that will ensure its survival.

>  I, OTOH, believe that CW will survive
> > and thrive on its own merits but if it cannot survive on its own merits,

So the hams who recently upgraded are the CBers and freebanders? Dick, how
do you face yourself in the mirror every morning? Why is it OK for you to
use CB and not for me to use CB?

It seems strange for someone who knows CW to bootleg someone's call, except in the case of a former amateur whose license was revoked....

Bootlegging usually is with the voice modes.

its that sort of behaviour that puts people off the the whole internet revolution

"sending large attatchements to your enemies"

grown up dont have enemies,only children in the school playground have that outlook,[and of course governments/political parties etc,who are still mainly children]

writes:

>More kids are killed in high school sports than in high school shootings.

Please provide your sources for that claim, Cecil. And we are concerned about
ALL schools, not just high schools.

Even if true, your claim misses some important facts:

- Students can avoid the risk of death from high school sports by not
participating in them. They cannot avoid the risk of death by shooting in
school by not participating.

- Deaths from school sports are accidental. Deaths from high school shootings
are intentional.

>Magnitudes more are killed in automobile accidents.

Key word there is ACCIDENTS.

> We seem to have lost
>all perspective when it comes to guns.

Not at all. Firearms have a place in our society.

> Punish the criminals, not the guns.

How do you "punish" an inanimate object?

The lifeboats had flares? Your source, please.

>That's how
>people were often rescued before radio.

The Titanic fired off all of the rockets she had before sinking. They were clearly seen by the Californian, but were not recognized as distress signals.

No other ship was in the area. In fact, they were all AVOIDING the area because of the ice. Carpathia, the Cunard liner which rescued the survivors in the lifeboats, came from at least 47 miles away. (Most books say "58 miles away", but recent analyses of the probable position errors of both ships points to a minimum distance of 47 miles).

> The situation would certainly
>have been worse but not necessarily hopeless.

Sure - a nother ship MIGHT have run through the ice field before those in the boats froze to death.

I suggest reading "A Night To Remember" and "The Night Lives On", both by Walter Lord, to get a more accurate picture of what really happened.

It is certainly possible that a packet station would have been able to
receive a message that was not audible via SSB.  It all depends on the
current conditions.

i didnt say area ... i said radius .. big difference

a 100km radius allows for destruction up to 200kms across ... thats quite a
bit!
